Abstract of theses presented to the senate of University Putra Malaysia in fulfillment  
of the requirement for the Master of Science

ENHANCING MARKET-BASED SCHEDULING ALGORITHM ON GLOABLLY  
DISTRIBUTED WEB SERVERS USING LEAST SUITABLE SEALED BID  
TECHNIQUE

Scheduling of a multiple distributed servers is considered as a complex problem. Considered as NP-complete problem, where no single efficient algorithm guaranteed to produce optimal results. This thesis investigates on how to find optimal solution for distribute system, by implementing market based scheduling Algorithm (MBSA).

On implementing the MBSA, a new auction technique which is the least suitable sealed bid auction will be introduced. It is found that least suitable sealed bid technique will give the close-to-optimum solution.

In the implementation, cooperative agents were used as a middleware between web servers and stand-alone schedulers. Each of these agents is connected directly to a different scheduling server. These agents work cooperatively with each other through the Internet using message exchanging.

An improved algorithm was implemented to decrease the amount of message exchanging between agents, which increased the performance of the system.

memenuhi keperluan untuk ijazah Master Sains

**PENAMBAIKAN PENSKEDULAN ALGORITMA BERDASARKAN  
PASARAN PELAYAN WEB TERAGIH GLOBAL MENGGUNAKAN  
KAEDAH LELONGAN TERTUTUP**

Oleh

Penjadualan beberapa pelayan teragih dianggapkan sebagai masalah yang kompleks. Masalah ini dikategorikan sebagai masalah NP-complete, di mana tiada satu pun algoritma yang cekap menjamin hasil yang optima. Tesis ini menyelidik bagaimana untuk penyelesaian optima ke atas sistem teragih dengan melaksanakan Penjadualan Algoritma Berasaskan Pasaran ke atas Pelayan Web Teragih (MBSA).

Dalam melaksanakan MBSA, satu teknik lelongan baru yang berdasarkan bida tertutup yang paling tidak sesuai akan diperkenalkan. Didapati teknik ini akan memberi penyelesaian yang hampir optima.

Di dalam perlaksanaan agen-agen kerjasama telah digunakan sebagai perantara di antara pelayan web dan penjadualan tunggal. Setiap agen-agen ini disambungkan

secara langsung kepada pelayan penjadualan yang berbeza. Agen-agen ini akan bekerjasama antara satu sama lain melalui internet dengan menggunakan pertukaran mesej.

Algoritma yang telah ditingkatkan ini telah dilaksanakan untuk mengurangkan jumlah bilangan pertukaran mesej antara agen-agen, di mana iaanya telah meningkatkan keupayaan sistem.

## **AKNOWLEDGEMENT**

It is a great opportunity to thank Dr. Rozita Bt. Johari for her great help that shows on this thesis as it is now. and for her supporting me with the resources and materials

Beside that I would like to thank Dr.Shamala Subramaniam on her support and great opinion.

I certify that an Examination Committee has met on 16<sup>th</sup> of February 2006 to conduct the final examination of Mahmoud Al-Ewiwi on his Master of Science thesis entitled “Least Suitable Sealed Bid Technique for Market Based Scheduling Algorithm on Distributed Web Servers” in accordance with Universiti Pertanian Malaysia (Higher Degree) Act 1980 and Universiti Pertanian Malaysia (Higher Degree) Regulations 1981. The Committee recommends that the candidate be awarded the relevant degree. Members of the Examination Committee are as follow:

**Nasir Sulaiman, PHD**

Associate Professor

Faculty of Computer Science and Information Technology  
Universiti Putra Malaysia  
(Chairman)

**Mohamed Othman, PHD**

Associate Professor

Faculty of Computer Science and Information Technology  
(Internal Examiner)

**Jalil Bin Md. Desa, PHD**

Lecturer

Faculty of Computer Science and Information Technology  
Universiti Putra Malaysia  
(Internal Examiner)

**Yazid Mohd Saman, PHD**

Professor

Faculty Science and Technology  
Kolej University Sians & Teknology Malaysia  
(External Examiner)
