The rest of my Family and Friends

*For their invaluable love, understanding,
patience, support and care*

Abstract of thesis presented to the Senate of Universiti Putra Malaysia in fulfillment of the requirement for the degree of Master of Science.

EFFECTS OF NEWCASTLE DISEASE VIRUS ON GENE EXPRESSION PROFILING, AND NITRIC OXIDE AND GLUTATHIONE PRODUCTION IN MCF-7 BREAST CANCER CELL LINE

By

MOHAMED KALID ALI

APRIL 2011

Chairman: Profesor Datin Paduka Khatijah Mohd Yusoff, PhD

Faculty: Biotechnology and Biomolecular Sciences

Breast cancer is a major cause of death for many women around the world. Progress has been made in the survival of breast cancer patients due to improved understanding of the molecular processes, diagnostic techniques and knowledge of the treatment using chemotherapy, radiotherapy, and virotherapy. The field of virotherapy has emerged from the past decade by using oncogenic viruses to selectively kill cancerous cells without harming normal cells. Newcastle disease virus (NDV), an avian paramyxovirus, induces apoptosis in a variety of human malignant cells such as breast cancer cells. In this study, the cytolytic properties of NDV strain AF2240 on gene expression profiling, measurement of Nitric oxide (NO) free radical and Glutathione antioxidant (GSH) were investigated by using RT-PCR, capillary electrophoresis, flow cytometry both under normoxic and hypoxic condition.

Multiplex Gene Expression Kit was used whereby the relative expressions of 25 different genes were measured at the mRNA level. The results showed that treatment of MCF7 cells with NDV caused apoptosis, NO production and GSH depletion and changed the expression level of most of the genes involved in tumour progression, cell cycle regulation, cell growth and differentiation, apoptosis, cancer suppression, and DNA damage, as measured by RT-PCR and capillary electrophoresis. Since the mode of apoptosis by NDV is NO and GSH dependent, comparisons of NDV with NO-Donors such as DETA-NONOate and NO-Scavengers like cPTIO were also studied. Increased production of Nitric oxide (NO) and depleted levels of Glutathione (GSH) after treatment of NDV at normoxic condition compared NDV at hypoxic condition were observed. However, addition of DETA-NONOate to MCF-7 cells has induced NO production, GSH depletion. Moreover, NO production and apoptosis were attenuated, and GSH increased after addition of cPTIO either alone or with combination of either NDV or DETA-NONOate to the MCF-7 cells. In addition to the above, co-treatment of NDV+DETA-NONOate depleted NO production and cell death compared to the treatment of NDV alone to cells. From this study, it was concluded that NDV induces apoptosis, Gene expression, NO production and GSH depletion in MCF-7 cells which makes it an effective anticancer agent due to its ability to kill breast cancer cell lines in normoxic and hypoxic conditions.

Abstrak thesis yang dikemukakan kepada Senat Universiti Putra Malaysia
sebagai memenuhi keperluan untuk ijazah Master Sains

**KEBERKESANAN NEWCASTLE DISEASE VIRUS DALAM PROFIL
EKSPRESI GEN DAN PENGELUARAN NITRIK OKSIDA SEL KANSER PAYU
DARA MCF-7**

Oleh

MOHAMED KALID ALI

APRIL 2011

Pengerusi : Profesor Datin Paduka Khatijah Mohd Yusoff, PhD

Fakulti : Bioteknologi dan Sains Biomolekul

Kanser payu dara merupakan pembunuh terbesar bagi wanita di seluruh dunia. Peningkatan kadar kelangsungan hidup bagi penghidap kanser payu dara mula ditunjukkan apabila kefahaman mengenai proses molekul, teknik diagnostik dan pengetahuan mengenai rawatan seperti kemoterapi, radioterapi dan viroterapi semakin berkembang. Kaedah viroterapi mula dikenali sejak sedekad yang lepas apabila virus-virus onkogenik mula digunakan sebagai sasaran untuk membunuh sel kanser tanpa mengganggu sel-sel yang lain. Newcastle Disease Virus (NDV) yang tergolong dalam kumpulan Avian Paramyxovirus, menyebabkan kematian sel dalam pelbagai jenis kanser yang merbahaya seperti kanser payu dara. Dalam kajian ini, kebolehan membunuh sel kanser oleh NDV AF2240 melalui “gene expression profiling”, penyukatan radikal bebas Nitrik Oksida (NO), dan “Glutathione” anti oksida telah dikaji dengan menggunakan

teknik RT-PCR, “capillary electrophoresis”, “flow cytometry” di bawah kondisi “hypoxic” dan “normoxic”. “Multiplex Gene Expression Kit” telah digunakan dan sementara itu, ekspresi 21 gen yang berhubung-kait boleh diukur pada peringkat mRNA. Keputusan kajian ini menunjukkan bahawa sel MCF-7 yang dirawat dengan menggunakan NDV telah menyebabkan kematian sel secara berprogram, tiada pengurangan atau pengeluaran GSH dan perubahan ekspresi sebahagian besar gen yang terlibat dalam pembesaran tumor, kawalan kitaran hidup sel, pertumbuhan dan diferensiasi sel, kematian sel secara berprogram, pembantutan pertumbuhan kanser dan kerosakan DNA seperti yang diukur melalui RT-PCR and “capillary electrophoresis”. Memandangkan cara NDV membunuh sel bergantung kepada NO and GSH, perbandingan NDV dengan NO-Donors seperti DETA-NONOate dan NO-Scavengers seperti cPTIO turut dijalankan. Peningkatan pengeluaran Nitrik Oksida (NO) and penurunan kadar Glutathione (GSH) selepas dirawat dengan NDV di bawah kondisi normoxic berbanding hypoxic turut diamati. Walau bagaimanapun, penambahan DETA-NONOate terhadap MCF-7 telah menyebabkan pengeluaran NO dan pengurangan GSH. Tambahan lagi, pengeluaran NO dan kematian sel secara berprogram berkurangan dan GSH meningkat apabila ditambah cPTIO sama ada secara sendiri atau digabungkan dengan NDV atau DETA-NONOate terhadap MCF-7. Malah, gabungan rawatan NDV+DETA-NONOate mengurangkan NO dan kematian sel berbanding dengan rawatan NDV sendirian.

Daripada kajian ini dapatlah dirumuskan bahawa NDV menyebabkan kematian sel secara berprogram, ekspresi gen, pengeluaran NO dan pengurangan GSH di dalam sel MCF-7 yang mana membuatkan ia sebagai rawatan anti kanser yang efektif kerana mampu membunuh sel kanser payu dara di bawah kondisi normoxic dan hypoxic.

Acknowledgements

First and foremost, Alhamdulillah, all praise is for Allah who made this thesis possible. It would have also not been possible without the guidance and the help of several individuals who have one way or another contributed and extended their valuable assistance in the preparation and completion of this study.

My utmost gratitude to Professor Datin Paduka Dr. Khatijah Mohamed Yusoff, Deputy Secretary General (Science), Ministry of Science, Technology and Innovation Malaysia. I would never forget the first day when I stepped into her office when she was the Deputy Vice-chancellor at UPM. Moments after I came out at her office I felt that I had met someone who will be of great help to me. Thank you for your encouragement, funding, support and guidance that had made my Masters possible.

Besides my Advisor, I would like to thank the rest of my supervisory committee, Dr. Firoozeh Jahanshiri, Professor. Abdul Rahman Omar, and Dr. Norazizah Shafee, for their patience, motivation, enthusiasm, discussion and immense knowledge. Their guidance helped me throughout the time of research and writing of this thesis.

I thank all my friends at Virology Lab 143, Puan Rodiah for her immediate attention for processing quotations and orders to the companies, Min and Ain, Aini, Hidayah, Wei Choong, Halimi, Eddie, Wannie, Hafifi, Kahfai, Rajik and Nicole.

Last but not the least; I would like to thank my Family and my other friends for their unflagging love and support throughout my life. I am indebted to my father (Khaalid Ali Xundhur) for his care and love, he worked industriously to support the family and spare no effort to provide the best possible environment for me to grow up. I cannot ask for more from my mother Abshiro, and my grandmother Hawa. I remember their constant support when I encountered difficulties. Mother (Hooyo) I love you. My brothers Ahmed, Abdulahi, Abdul Rahman and sisters Faiza, Ikram, Deeqa, Halima and Hawa, for your love. Friends like Said Hussein Id, Mawlid bashir, Said Toldo and Dr Abdiwali.

Special thanks to my beloved Ikram Bashaash, it is difficult to find words to express my gratitude and giving me part of your mind to think it more. Your motivation has made what I am today.

The generous support from the Islamic Development Bank is greatly appreciated.

In retrospect, I am amazed by the confidence from the trustees. I am sure my application was not the most outstanding one, but they still granted me the scholarship. Mr.Lkadmadi for his immediate replies and patience.

I certify that a Thesis Examination Committee has met on 4 April 2011 to conduct the final examination of Mohamed Kalid Ali on his thesis entitled "Effects of Newcastle disease virus on Gene Expression Profiling, and Nitric Oxide and Glutathione Production in MCF-7 Breast Cancer Cell Line" in accordance with Universities and University Colleges Act 1971 and the Constitution of the Universiti Putra Malaysia [P.U.(A) 106] 15 March 1998. The Committee recommends that the student be awarded the Master of Science degree.

Members of the Examination Committee were as follows:

Muhajir Hamid, PhD

Associate Professor
Faculty of Biotechnology and Biomolecular Sciences
Universiti Putra Malaysia
(Chairman)

Noorjahan Banu Binti Mohammed Alitheen, PhD

Associate Professor
Faculty of Biotechnology and Biomolecular Sciences
Universiti Putra Malaysia
(Internal Examiner)

Janna Ong binti Abdullahi, PhD

Associate Professor
Faculty of Biotechnology and Biomolecular Sciences
Universiti Putra Malaysia
(Internal Examiner)

Subha Bhasu, PhD

Senior Lecturer
Faculty of Science
Universiti Malaya
(External Examiner)

NORITAH OMAR, PhD

Associate Professor and Deputy Dean
School of Graduate Studies
Universiti Putra Malaysia

Date: 23 August 2011

This thesis was submitted to the Senate of Universiti Putra Malaysia and has been accepted as fulfilment of the requirement for the degree of Master of Science. The members of the

Supervisory Committee were as follows.

Khatijah Yusoff, PhD

Professor
Faculty of Biotechnology and Biomolecular Sciences
Universiti Putra Malaysia
(Chairman)

Abdul Rahman Omar, PhD

Professor
Institute of Biosciences
University Putra Malaysia
(Member)

Norazizah Shafee, PhD

Lecturer
Faculty of Biotechnology and Biomolecular Sciences
Universiti Putra Malaysia
(Member)

Fatemah Jahanshiri, PhD

Lecturer
Faculty of Biotechnology and Biomolecular Sciences
Universiti Putra Malaysia
(Member)

HASANAH MOHAMED GHAZALI, PhD

Professor and Dean
School of Graduate Studies
Universiti Putra Malaysia

Date: 4 April 2011

DECLARATION

I declare that the thesis is my original work except the quotations and citations which have been duly acknowledged. I also declare that it has not been previously, and is not concurrently submitted for any other degree at UPM or at any other Institution.
