**MICROWAVE-BASED TECHNIQUE FOR
DETERMINATION OF CHOLESTEROL IN MILK
PRODUCTS**

The logo of Universiti Putra Malaysia (UPM) is a shield-shaped emblem. It features a red and white stylized 'Y' shape in the center, with a book icon at the top. The letters 'UPM' are written in white on a red background in the top left corner of the shield.

MICROWAVE-BASED TECHNIQUE FOR DETERMINATION OF CHOLESTEROL IN MILK PRODUCTS

By

NOORHASMIERA ABU JAHAR

June 2011

Chairperson : Associate Professor Nor Azah Yusof, PhD

Faculty : Science

A new method for determination of cholesterol in milk products has been developed based on dielectric properties of the cholesterol enzymatic reaction at microwave frequencies in the range of 0.2-20 GHz. The dielectric properties of cholesterol solutions, enzyme and the product of cholesterol-enzyme reaction were measured using an Open Ended Coaxial Probe (OECF) coupled with automated network analyzer (ANA) at room temperature (25°C). At frequency 4.98GHz and 10.9GHz the dielectric loss difference was obtain by subtracting the dielectric after the enzymatic reaction of cholesterol with dielectric of cholesterol oxidase alone. The cholesterol to cholesterol oxidase ratio at 1:2 is the best experimental condition for the detection of cholesterol using this system. The relative standard deviation (RSD) of the reproducibility was calculated to be 1.85% for frequency 4.98 GHz and 2.06% for frequency 10.9 GHz at concentration of 38.67 ppm. The limit of detection was calculated to be 0.83 ppm at frequency 4.98GHz and 1.18 ppm at frequency 10.9 GHz. The results obtained from the developed method were compared with the standard method of cholesterol determination (BOHAC extraction- HPLC). The comparison result shows a poor agreement between the developed method and

standard method. The value of $t_{\text{calc}} > t_{\text{table}}$ at 95% confidence level, thus, there is significant difference between both techniques at this confidence level. This may be due to interference of other compound such as protein, calcium, water and carbohydrate in the milk that affects the dielectric loss and because dielectric loss is too sensitive compared to dielectric constant.

Abstrak tesis yang dikemukakan kepada Senat Universiti Putra Malaysia sebagai memenuhi keperluan untuk ijazah Master Sains

TEKNIK BERTERASKAN GELOMBANG MIKRO UNTUK PENGESANAN KOLESTROL DALAM PRODUK SUSU

Oleh

NOORHASMIERA ABU JAHAR

Jun 2011

Pengerusi : Prof. Madya Nor Azah Yusof, PhD

Fakulti : Sains

Satu kaedah baru untuk mengesan kolesterol dalam makanan telah dibangunkan berdasarkan sifat dielektrik tindakbalas enzim kolesterol pada frekuensi gelombang mikro dalam julat 0.2-20GHz. Ciri-ciri dielektrik kolesterol, enzim dan tindakbalas enzim dan kolesterol telah diukur menggunakan sensor dwipaksi terbuka hujung dengan kawalan komputer perisian analisis automatik rangkaian pada suhu bilik (25°C). Pada frekuensi 4.98 GHz dan 10.9 GHz perubahan kehilangan dielektrik diperolehi dengan menolak dielektrik selepas tindakbalas kolesterol dan enzim dengan dielektrik kolesterol oksidase dengan ratio 1:2 adalah keadaan terbaik untuk mengesan kolesterol menggunakan system ini. Nilai sisihan piawai relatif dikira ialah 1.85% untuk frekuensi 4.98 GHz dan 2.06% untuk frekuensi 10.9 GHz pada kepekatan 38.67 ppm. Had pengesanan dikira ialah 0.83 ppm di frekuensi 4.98GHz dan 1.18 ppm di frekuensi 10.9GHz. Keputusan yang diperolehi daripada kaedah yang dibangunkan dibandingkan dengan kaedah piawai untuk mengesan iaitu (BOHAC extraction- HPLC). Keputusan perbandingan kurang memuaskan antara kaedah baru dan kaedah piawai. Nilai $t_{calc} > t_{table}$ pada 95% darjah keyakinan, ini menunjukkan perbezaan yang nyata di antara kedua-dua kaedah pada darjah

keyakinan tersebut. Ini kerana terdapat gangguan unsure-unsur lain seperti protein, kalsium, air dan karbohidrat dalam susu yang mengganggu kehilangan dielektrik dan kerana kehilangan dielektrik lebih sensitif berbanding pemalar dielektrik.

ACKNOWLEDGEMENTS

My deepest praise to Allah s.w.t for giving me the strength and good health to pursue and complete my Master thesis. This project and its report could not be materialized without the collaboration of numerous people. I gracefully acknowledge the contribution of the many individuals who were important in the development of this project.

The professionalism, dedication and expertise of Dr Nor Azah Binti Yusof and Prof Dr Kaida Khalid have been so indispensable, inspirational and without their continuous support, encouragement, helpful, and advice, I won't be able to continue and complete this thesis. I would also thank my beloved parents, my husband and families for giving their best encouragement and support.

I wish to express deepest thanks to the lecturers and staff in the Department of Chemistry and Physic, Faculty of Science for their advice, assistance, suggestion and being so approachable and helpful throughout the course of this project . In addition, I need to thank my outstanding lab mates for their friendship and making my life enjoyable.

Nor can I neglect the contribution of the others who are not being mentioned here for facilitating me indirectly. Thank you so much to all.

APPROVAL

I certify that an Examination Committee has met on **date of viva voce** to conduct the final examination of **Noorhasmiera Abu Jahar** on her **degree** thesis entitled **“Microwave-based Technique for Determination of Cholesterol in Milk Products”** in accordance with Universiti Pertanian Malaysia (Higher Degree) Act 1980 and Universiti Pertanian Malaysia (Higher Degree) Regulation 1981. The committee recommends that the candidate be awarded the (Name of relevant degree).

Members of the Examination Committee were as follows:

Gwendoline Ee Cheng Lian, PhD

Professor
Faculty of Science
Universiti Putra Malaysia
(Chairman)

Md Jelas bin Harun, PhD

Professor
