GENERATING MUTUALLY UNBIASED BASES AND DISCRETE WIGNER FUNCTION FOR THREE-QUBIT SYSTEM

By

Mojtaba Aliakbarzadeh

May 2011

Chair: Hishamuddin b Zainuddin, PhD

Faculty: Science

In this research, we construct Wigner functions on discrete phase spaces to represent quantum states for the special case of 3-qubit system. For determining this discrete phase space, we label the axes of phase space with finite field (Galois field) having eight elements. Based on this labelling, we developed a program in Matlab software for 3-qubit system which is also extendible for higher dimensions and more number of qubits. Results of this program lead to nine sets of parallel lines which is named as striations. Equivalently we label the horizontal and vertical axes of our phase space by quantum states of 3 qubits. This labelling and the use of suitable translation vectors on our striations produce the nine mutually unbiased bases for the Hilbert space.

For calculating discrete Wigner function, we have determined appropriate quantum net $Q(\lambda)$. There are 8^9 different choices for defining quantum nets but by using some unitary operators we reduce our choices to just eight different choices of quantum nets (eight similarity classes).

We developed another program in Maple, which gives us eight different similarity classes of quantum nets. This program also gives us the phase-space point

operators A_α related to each class of quantum nets (these A_α operators are used in calculating Wigner function). Based on one of these similarity classes, we calculated the Wigner functions for GHZ and W states and also an embedded Bell state which is not completely entangled. We discussed some of the properties of these Wigner functions.

Dalam Penyelidikan ini, dibangunkan fungsi Wigner pada ruang fasa diskrit untuk mewakili keadaan kuantum untuk kes khusus sistem 3-qubit. Bagi menentukan ruang fasa diskrit ini, dilabelkan paksi ruang fasa dengan medan terhingga (medan Galois) yang mempunyai lapan unsur. Berdasarkan penglabelan ini, satu program dalam perisian Matlab telah dibangunkan yang juga dapat dipanjangkan ke dimensi lebih tinggi dan bilangan qubit yang lebih banyak. Keputusan program menghasilkan sembilan set garis selari yang dinamakan Jaluran. Secara setara dilabelkan paksi mengufuk dan menegak ruang fasa dengan keadaan kuantum 3 qubit. Penglabelan ini dan penggunaan vektor traslasi yang bersesuaian ke atom Jaluran menghasilkan sembilan asas saling saksama bagi ruang Hilbert.

Bagi mengira fungsi Wigner diskrit, kami telah tentukan jaring kuantum $Q(\lambda)$ yang bersesuaian. Terdapat 8^9 pilihan berbeza bagi menakrifkan jaring kuantum tetapi dengan menggunakan operator unitari, kami telah mengurangkan pilihan tersebut ke hanya lapan pilihan jaring kuantum yang berbeza (lapan kelas keserupaan).

Kami bangunkan program lain dalam Maple yang memberikan lapan kelas keseru-

paan jaring kuantum. Program ini juga memberikan operator titik ruang fasa A_α yang berkaitan dengan setiap kelas jaring kuantum (operator A_α ini diguna untuk mengira fungsi Wigner). Berdasarkan salah satu kelas keserupaan, dikirakan fungsi Wigner untuk keadaan GHZ dan W dan juga keadaan bell terbenam yang tidak terbelit selengkapnya. Dibincangkan beberapa ciri fungsi Wigner ini.

ACKNOWLEDGEMENTS

Thanks god for giving me strength and stimulus to complete this theses which increased my knowledge in theoretical physics, improved my thinking skills and enhanced my patience facing problems.

I would like to express my sincere gratitude to my project supervisor, Associate Professor Dr.Hishamuddin Zainuddin for his helpful guidance, suggestions and support throughout this research work and also my cosupervisor Dr. Halimah Mohamed Kamari for her valuable support.

My deepest gratitude and appreciation to my parents, my dear father and mother because of their encouragement, patience and kindness.

The present research is supported by FRGS project 01-10-07286FR

I certify that a Thesis Examination Committee has met on 12 May 2011 to conduct the final examination of Mojtaba Aliakbarzadeh on his thesis entitled “GENERATING MUTUALLY UNBIASED BASES AND DISCRETE WIGNER FUNCTIONS FOR THREE-QUBIT SYSTEM” in accordance with the Universities and University Colleges Act 1971 and the Constitution of the Universiti Putra Malaysia [P.U.(A) 106] 15 March 1998. The Committee recommends that the student be awarded the Master of Science.

Member of the Thesis Examination Committee were as follows:

Zainal Abidin b Talib, PhD

Associate Professor
Faculty Science
Universiti Putra Malaysia
(Chairman)

Zuriati bt Ahmad Zukamain, PhD

Lecturer
Faculty of Computer Science and Information Technology
Universiti Putra Malaysia
(Internal Examiner)

Isamiddin S.Rakhimov, PhD

Associate Professor
Faculty Science
Universiti Putra Malaysia
(Internal Examiner)

Hasan Abu Kassim, PhD

Professor
Faculty Science
Universiti Malaya
(External Examiner)

NORITAH OMAR, PhD

Professor and Deputy Dean
