Abstract of thesis presented to the Senate of Universiti Putra Malaysia in
fulfilment of the requirement for the degree of Doctor of Philosophy

**MODELING OF TRANSPORT PROCESSES FOR AIR POLLUTANTS ENHANCED
WITH GEOGRAPHIC INFORMATION SYSTEM**

By

BONIFACE CHUKS EKECHUKWU

April 2004

Chairman: Prof. Dato. Muhamad Zohadie Bardaie, Ph.D., P.Eng.

Faculty: Engineering

The message of this research is that meteorological data should be resolved first to obtain their resultants. The resultants of the meteorological data, wind speed and direction are then used for the evaluation of Pasquill-Gifford plume dispersion model for better accuracy. Air pollutants dispersing in the atmosphere have another force acting on them. The force that is acting on the air pollutants is the wind velocity, which has both magnitude and direction. The wind finally succeeds in diverting and altering the normal speed and direction of the pollutant. Under still air, air pollutants can disperse normally in the atmosphere at their own speed and direction. The speed and force of the wind normally dominate the air pollutants. This is why resultant speed is absolutely necessary in tracing air pollutants dispersion. The resultant speed and direction are like the true speed and direction of the pollutant. The use of trigonometry in determination of resultant speed and direction gives more accuracy in locating the true position of the pollutant in the form of position vector. This research has used a geometric approach to trace air pollutants in the form of position vectors. When the equation is resolved the resultant speed and direction

usually come out. This resultant speed in turn is used to evaluate Pasquill-Gifford plume dispersion model to get the accurate concentration of the pollutants. Observed CO data from Kajang town of Malaysia has been used to validate the model. The research further enhances the model with Geographic Information Systems. Dots density is used to represent distribution of pollutant molecules, polygon to represent buildings and lines to represent roads or rails. This research, having used a new method of simulating the movement of air pollutants with respect to winds direction, applied geographical information systems (GIS) to display in a town map the movement of air pollution.

Abstrak tesis dikemukakan kepada Senat Universiti Putra Malaysia sebagai memenuhi keperluan untuk Ijazah Doktor Falsafah

**PEMBINAAN MODEL UNTUK MENGESAN ARAH DAN PENYEBARAN
PENCEMAR-PENCEMAR UDARA DIENHANCE OLEH SISTEM INFOMASI
GOEGRAFIK**

Fakulti : Kejuruteraan

Mesej penyelidikan ini ralah data meteorologi patut diseresaikan sebelum memperoleni keputusanna. Keputusana data meteorologi, kelajuan dan aran angin akan digunakan seterusnya untuk penilain Pasquill-Gifford ‘plume’ dispersi model bagi meninggikan ketepatan model ini pencemar udara di atmosfera mempunyai satu lagi daya yang bectindak ke atasnya. Daya yang dimaksudkan ini ralah kelajuan angin yang mempunyai aran dan magnitud. Aknirnya, anyin akan berjaya dalam menguban kelajuan dan aran tuju pencemar-pencemar udara. Pada kebiasaan, kelajuan dan daya angin mengatas kelajuan dan daya pencemar udara. Oleh itu, kelajuan keputusan data meteorologi adalah perlu dalam mengesan dispersi pencemar udara. Kelajuan dan aran daripada keputusan data meteorologi adalah seperti kelajuan dan aran sebenar pencemar udara. Penggunaan trigonometri dalam penentuan kelajuan dan aran keputusan data meteorologi memberi lebin ketepatan dalam menentukan posisi sebenar bahan peneemar dalam bentuk posisi vektor. Bila persamaan diselesaikan, kelajuan dan aran keputusan data meteorologi diperoleni.

Kelajuan dari sini digunakan untuk menentukan, model Pasquill-Gifford plume-dispersi bagi mendapatkan konsenirasi tepat pencemar. Data pemerhatian dari Bandar Kajang (di Malaysia) telan digunakun untuk mengesahkan model tersebut. Kajian ini juga turut menjadikan model tersebut lebin menarik dengan sistem informasi geografik (GIS). ‘Dots density’ digunakan untuk mewakili penyebaran molekul pencemari poligon untuk mewakili bangunan dan garisan untuk mewakili jalan raya dan jalan keretapi. Kajian ini setelah menggunakan kaedan baru untuk stimulasi gerakan pencemar udara dengan mengambil kera aran angin, mengaplikasikan sistem informasi geografi (GIS) untuk mempamerkan pergerakan peneemaran udara dalam peta bandar.

ACKNOWLEDGEMENTS

The academic luminary and renowned personality, Y. Bhg. Prof. Dato' Dr. Ir. Muhamad Zohadie Bardaie, the Vice-Chancellor of Universiti Putra Malaysia, UPM has supervised this work to the stage-of-the-art. He contributed immensely to the success of this work. I am very grateful to him. I acknowledge the help and support given to me by my supervisory committee. My gratitude also goes to Prof. Dr. Ir. Wan Ishak Wan Ismail, Director, Institute of Advanced Technology, UPM, and Prof. Dr. Ir. Azni Idris from Faculty of Engineering, UPM. They have relentlessly contributed in no small measure to the success of this work. I am also very grateful to Mr Jasni and Ms Suzana from Alam Sekiter Malaysia Sdn Bhd (ASMA) for their support by providing the source data for this work. Next I am grateful to my wife, Stella who takes care of my children during this my absence and surfer the agony of loneliness. May God bless her and the children. Finally, and most importantly, I give thanks and glory to God Almighty who made everything possible. Out of His Grace, God allowed this work to come to successful completion. May glory be to God now and forever.

I certify that an Examination Committee met on 2nd of April, 2004 to conduct the final examination of Boniface Chuks Ekechukwu on his Doctor of Philosophy thesis entitled “Modelling of Transport Processes For Air Pollutants Enhanced With Geographic Information System” in accordance with Universiti Pertanian Malaysia (Higher Degree) Act 1980 and Universiti Pertanian Malaysia (Higher Degree) Regulations 1981. The Committee recommends that the candidate be awarded the relevant degree. Members of the Examination Committee are as follows:

AHMAD RODZI MAHMUD, Ph.D.

Associate Professor
Faculty of Engineering
Universiti Putra Malaysia
(Chairman)

DATO MUHAMAD ZOHADIE BARDAIE, Ph.D.

Professor
Faculty of Engineering
Universiti Putra Malaysia
(Member)

WAN ISHAK WAN ISMAIL, Ph.D.

Professor
Institute of Advanced Studies
Universiti Putra Malaysia
(Member)

AZNI IDRIS, Ph.D.

Professor
Faculty of Engineering
Universiti Putra Malaysia
(Member)

TAKAHARU KAMEOKA, Ph.D.

Professor
4-11-6 Shinsei, Ichinomiya-Shi, Aichi-Ken
Japan.
(Independent Examiner)

GULAM RUSUL RAHMAT ALI, Ph.D.

Professor/Deputy Dean
School of Graduate Studies
Universiti Putra Malaysia

Date:

This thesis submitted to the Senate of Universiti Putra Malaysia has been accepted as fulfillment of the requirement for the degree of Doctor of Philosophy. The members of the Supervisory Committee are as follows:

DATO MUHAMAD ZOHADIE BARDAIE, Ph.D.

Professor
Faculty of Engineering
Universiti Putra Malaysia
(Chairman)

WAN ISHAK WAN ISMAIL, Ph.D.

Professor
Institute of Advanced Studies
Universiti Putra Malaysia
(Member)

AZNI IDRIS, Ph.D.

Associate Professor
Faculty of Engineering
Universiti Putra Malaysia
(Member)

AINI IDERIS, Ph.D.

Professor/Dean
School of Graduate Studies
Universiti Putra Malaysia
Date:

DECLARATION

I hereby declare that the thesis is based on my original work except for quotations and citations, which have been duly acknowledged. I also declare that it has not been previously or concurrently submitted for any other degree at UPM or other institutions.
