Abstract of thesis presented to the Senate of Universiti Putra Malaysia in fulfilment of the requirements for the degree of Master of Science

ENVIRONMENTAL METRICS AND RECEPTOR MODELLING OF RIVER WATER QUALITY STATUS AT LINGGI RIVER BASIN, MALAYSIA

By

MUNIRAH BINTI ABDUL ZALI

December 2013

Chairman: Hafizan Bin Juahir, Ph.D

Faculty: Environmental Studies

Intensifying demands on water resource management have produced many outstanding methods in order to protect our valuable nature. Therefore, in order to conserve the river basin, pollution sources must be tracked attentively owing to land-used and water level variations (low, normal and high). Currently the increasing development trends along Linggi River Basin have pose alarming environmental issues especially on the water resources. In fact, great environmental protection must be established for the surface river water due to its important as a source of drinking water purposes in Negeri Sembilan. Foremost water research in multivariate and modelling techniques lead to combination of cluster analysis (CA), discriminant analysis (DA), principal component analysis (PCA) and receptor modelling to investigate the surface water quality at Linggi River Basin (LRB), Malaysia ranging from year 2000 to 2010. Under cluster analysis three regions were acquired such as high pollution status (HPS), moderate pollution status (MPS) and low pollution status (LPS). Based on thirty water quality parameters only fifteen variables were successfully discriminated as significant water quality parameters in the differentiation of regions and water level classification. Spatial assessment of DA revealed significant anthropogenic influences and seasonal changes at the three regions with DO as the most significant parameter; whereas oil waste and contaminated metals exhibits distinctive features during low, normal and high water level. PCA revealed that only nine river pollution sources (water hardness-natural mineral salt, surface runoff, anthropogenic input, raw sewage disposal, chemical changes, industrial activities, agricultural runoff, rubber effluent and domestic waste) were characterized. Despite that distinguishing the contamination in LRB were identified to be contributed by waste oil, traffic runoff and waste water in temporal assessment via PCA. Source apportionment results concluded that anthropogenic input was the major pollution sources at three cluster regions. However based on temporal variation, waste water, fertilizer waste, and soil runoff also show impacts on the river water quality status suggest the hydrological features and runoff from river play a major role in assimilating and carrying the pollutants during tidal changes. Therefore, this study is expected to support the local environmental agencies in managing the river basin based on the comprehensive and reliable informative results as regards to the spatial and temporal dissimilarity as well as definite pollution sources in Linggi River.

Abstrak tesis yang dikemukakan kepada Senat Universiti Putra Malaysia sebagai memenuhi keperluan untuk ijazah Master Sains

**ENVIRONMETRIK DAN PERMODELAN RESEPTOR BAGI STATUS KUALITI AIR
SUNGAI DI LEMBANGAN SUNGAI LINGGI, MALAYSIA**

Oleh

MUNIRAH BINTI ABDUL ZALI

Disember 2013

Pengerusi: Hafizan bin Juahir, Ph.D

Fakulti: Pengajian Alam Sekitar

Tuntutan yang hebat ke atas pengurusan sumber air telah menghasilkan banyak kaedah yang cemerlang untuk melindungi alam semula jadi yang berharga. Oleh itu, untuk memelihara lembangan sungai, punca pencemaran mesti dikesan dengan lebih teliti berpunca dari perbezaan penggunaan tanah dan perubahan paras air (rendah, normal dan tinggi). Pada masa ini, aliran pembangunan yang semakin meningkat di sepanjang Lembangan Sungai Linggi telah menimbulkan isu-isu alam sekitar yang membimbangkan terutamanya pada sumber air. Malah, perlindungan alam sekitar perlu diwujudkan untuk permukaan air sungai kerana ia penting sebagai penggunaan sumber air minum di Negeri Sembilan. Keutamaan penyelidikan air dalam teknik multivariat dan permodelan membawa kepada gabungan analisis kelompok (AK), analisis diskriminan (AD), analisis komponen utama (AKU) dan model reseptor untuk menyiasat kualiti air permukaan di Lembangan Sungai Linggi (LSL) di Malaysia daripada tahun 2000 hingga 2010. Di bawah analisis kelompok tiga kawasan telah diperolehi seperti status pencemaran tinggi (SPT), status pencemaran sederhana (SPS) dan status pencemaran rendah (SPR). Berdasarkan tiga puluh parameter kualiti air hanya lima belas pembolehubah yang telah berjaya didiskriminasi sebagai parameter kualiti air yang penting dalam membezakan kawasan dan klasifikasi paras air. Penilaian secara tempat oleh AD mendedahkan pengaruh antropogenik yang penting dan perubahan bermusim di ketiga-tiga kawasan dengan DO sebagai parameter yang paling penting; manakala sisa minyak dan logam tercemar mempamerkan ciri-ciri tersendiri semasa paras air yang rendah, normal dan tinggi. AKU mendedahkan bahawa hanya sembilan punca pencemaran sungai (kekerasan air- garam mineral semulajadi, air larian permukaan, input antropogenik, pembuangan kumbahan mentah, perubahan kimia, aktiviti perindustrian, air larian pertanian, efluen getah dan sisa domestik) telah ditemui. Selain itu, pencemaran yang berbeza di LSL telah dikenalpasti berpunca dari sisa minyak, aliran trafik dan air sisa dalam penilaian tempoh melalui AKU. Keputusan pembahagian sumber menyimpulkan bahawa input antropogenik adalah punca pencemaran utama di tiga kelompok kawasan. Walau bagaimanapun berdasarkan perubahan tempoh, air sisa, sisa baja, dan aliran tanah juga menunjukkan kesan terhadap status kualiti air sungai menunjukkan bahawa ciri-ciri hidrologi dan larian air dari sungai memainkan peranan penting dalam menerapkan dan pembawaan pencemaran semasa perubahan pasang surut. Oleh itu, kajian ini dijangka akan menyokong agensi-agensi alam sekitar tempatan dalam pengurusan lembangan sungai berdasarkan keputusan maklumat yang komprehensif dan boleh dipercayai berhubung perbezaan dalam ruang dan masa serta sumber-sumber pencemaran yang pasti dalam Linggi River.

ACKNOWLEDGEMENTS

In the name of Allah, the Most Gracious and Most Merciful.

I would to express millions thanks to my beloved husband for encouraging me to finish my thesis writing in ease and pain. To my supervisor, Dr Hafizan bin Juahir, Thank you for introducing new passion for me in environmental study especially in the art of data analysis. I believe in my capabilities and I want to contribute something to my nation in future. For my endless love parents Abdul Zali bin Baba and Sharipah Din, my siblings and my close friends, Ananthu Retnam, Nurul Afiqah, Nur Hazirah, Norazida Manan and Norliza Ismail, millions gratitude towards all of you for being with me from beginning of semester till we were graduated in Universiti Putra Malaysia. Special appreciation to my colleague at Jabatan Kimia Malaysia, Azlina Md Kassim for keep enlightens me in thesis writing and reviewing my thesis writing. For last, I hope this thesis can be a reference to a person who love our environment and wants to rehabilitate our precious ecosystem for our future generations.

APPROVAL

I certify that a Thesis Examination Committee has met on (XXXXdate) to conduct the final examination of Munirah Abdul Zali on her thesis title “**ENVIRONMENTAL MODELLING OF WATER QUALITY STATUS AT LINGGI RIVER BASIN, MALAYSIA**” in accordance with the Universities and University Colleges Act 1971 and the Constitution of the Universiti Putra Malaysia [P.U.(A) 106] 15 March 1998. The Committee recommends that the student be awarded the Master of Science.

Members of the Thesis Examination Committee were as follows:

Name of Chairperson, Ph.D

Title

Name of Faculty

Universiti Putra Malaysia

(Chairman)

Name of Examiner 1, Ph.D

Date:

Declaration by graduate student

I hereby confirm that:

- this thesis is my original work;
- quotations, illustrations and citations have been duly referenced;
- this thesis has not been submitted previously or concurrently for any other degree at any other institutions;
- intellectual property from the thesis and copyright of thesis are fully-owned by Universiti Putra Malaysia, as according to the Universiti Putra Malaysia (Research) Rules 2012;
- written permission must be obtained from supervisor and the office of Deputy Vice-Chancellor (Research and Innovation) before thesis is published (in the form of written, printed or in electronic form) including books, journals, modules, proceedings, popular writings, seminar papers, manuscripts, posters, reports, lecture notes, learning modules or any other materials as stated in the Universiti Putra Malaysia (Research) Rules 2012;
- there is no plagiarism or data falsification/fabrication in the thesis, and scholarly integrity is upheld as according to the Universiti Putra Malaysia (Graduate Studies) Rules 2003 (Revision 2012-2013) and the Universiti Putra Malaysia (Research) Rules 2012. The thesis has undergone plagiarism detection software.
