**ADAPTATION OF DRASTIC MODEL FOR GROUNDWATER POLLUTION
POTENTIAL IN SELANGOR, MALAYSIA**

By

HANIM FARHANA BT ABD RAHMAN

February 2014

Chair : Mohamed Azwan Mohamad Zawawi

Faculty : Engineering

The problem of groundwater pollution can be expected to increase due to rapid development of urbanization, industrialization and intense agricultural activities. Hydrogeological environmental factors are important parameters to determine the groundwater pollution potential to predict the affected area caused by point source and non point sources of pollutant. In 1985 US Environmental Potential Agency published DRASTIC model to assess groundwater pollution potential. DRASTIC is corresponds to the initials of seven acronym standing for Depth to the water table, Recharge, Aquifer media, Soil media, Topography, Impact of the vadose zone and hydraulic Conductivity of the aquifer. This study describes the results of a groundwater pollution potential using DRASTIC model and GIS based on hydrogeological environmental of Selangor. The modification of ranges and ratings index in DRASTIC were done using Geostatistical Analyst to accommodate hydrogeological settings to implement and adopt data according to Selangor hydrogeological environmental parameters. Results show that DRASTIC Index ranges from 63 to 94. The map of groundwater pollution potential showed that the high risk groundwater pollution potential covered 17% of study area in west side of Selangor. However, only 27% of the east side of Selangor exposed to low risk groundwater pollution potential. Most of the affected area was considered in low land area along the coastal in shallow groundwater table alluvial aquifer. The Pesticide DRASTIC Index ranges from 57 to 110 with highest risk groundwater pollution potential for pesticide covered 5% of study area in northwest side of study area and the lowest risk located at the east side with 25% of study area. The groundwater pollution potential map was successfully developed using hydrogeological parameters for Selangor area. The Pesticide DRASTIC Index is higher than DRASTIC index, it can be concluded that the potential source of groundwater pollution derived from agricultural activities.

Abstrak tesis yang dikemukakan kepada Senat Universiti Putra Malaysia sebagai memenuhi keperluan untuk ijazah Master Sains

**MENGADAPTASI MODEL DRASTIC UNTUK POTENSI PENCEMARAN AIR
BAWAH TANAH DI SELANGOR, MALAYSIA**

Oleh

HANIM FARHANA BT ABD RAHMAN

Februari 2014

Pengerusi : Mohamed Azwan Mohamad Zawawi

Fakulti : Kejuruteraan

Pencemaran air bawah tanah akan bertambah teruk dengan kepesatan bandar-bandar, perindustrian dan perladangan dalam skala yang besar. Persekitaran hidro-geologi adalah parameter penting untuk menentukan potensi pencemaran air bawah tanah untuk meramalkan kawasan yang terjejas disebabkan oleh pencemaran sumber setempat dan sumber bukan setempat. Pada tahun 1985, US Environmental telah membangunkan model DRASTIC untuk menilai potensi pencemaran air bawah tanah. DRASTIC terdiri dari singkatan daripada beberapa hidrogeologi. Tesis ini mengkaji potensi pencemaran air bawah tanah dengan menggunakan model DRASTIC dan GIS berdasarkan keadaan hidro geologi negeri Selangor. Pengubahsuaian julat dan indeks penilaian dalam DRASTIC telah dilakukan dengan menggunakan Geostatistical Analyst bersesuaian dengan parameter hidrogeologi Selangor. Keputusan menunjukkan indek DRASTIC ber julat antara 63 hingga 94. Peta potensi pencemaran air bawah tanah menunjukkan bahawa risiko tinggi air bawah tanah yang berpotensi pencemaran meliputi 17% daripada kawasan kajian di sebelah Barat Selangor, 27% daripada bahagian timur Selangor terdedah kepada risiko rendah pencemaran air bawah tanah yang berpotensi. Kebanyakan kawasan yang terjejas berada di kawasan tanah landai di sepanjang pantai, air bawah tanah yang cetek dan akuifer jenis aluvium. Indek DRASTIC racun serangga ber julat antara 57 hingga 110 dimana risiko tinggi di kawasan barat laut meliputi 5% daripada Selangor dan risiko rendah terletak di timur meliputi 25% daripada Selangor. Kesimpulannya, peta potensi pencemaran air bawah tanah telah berjaya dibangunkan dengan menggunakan parameter hidro geologi bagi negeri Selangor. Indek DRASTIC racun serangga lebih tinggi dari indek DRASTIC, oleh itu dapat disimpulkan sumber yang berpontensi dalam pencemaran air bawah tanah adalah berpunca daripada aktiviti-aktiviti pertanian.

ACKNOWLEDGEMENTS

In the name of Allah, Al Rahman Al Rahim.

Praised be to Almighty Allah for giving me the utmost strength and courage to complete this thesis successfully.

I would like to express gratitude to my beloved parent, brothers and sisters also people around me who have give full support to complete this thesis.

My grateful appreciation and gratitude is directed towards my supervisors for their guidance to complete this thesis. They helped me to solve a lot of problems throughout the duration of this study.

Lastly, I would like to express my appreciation to all of examiners.

I certify that a Thesis Examination Committee has met on 27th February 2014 to conduct the final examination of Hanim Farhana bt Abd Rahman on her thesis entitled Adaptation of DRASTIC Model for Groundwater Pollution Potential in Selangor, Malaysia in accordance with the Universities and University Colleges Act 1971 and the Constitution of the Universiti Putra Malaysia [P.U. (A) 106] 15 March 1998. The committee recommends that the student be awarded the Soil and Water Engineering.

Members of the Thesis Examination Committee were as follows:

MOHD AMIN B MOHD SOOM, PhD, P.Eng.

Professor Ir,
Faculty of Engineering,
Universiti Putra Malaysia
(Chairman)

ABDUL RASHID B MOHAMED SHARIFF, PhD.

Associate Professor,
Faculty of Engineering,
Universiti Putra Malaysia
(Member)

THAMER AHMAD MOHAMMAD ALI, PhD.

Professor,
Faculty of Engineering,
Universiti Putra Malaysia
(Member)

S. SYAFALNI, PhD.

Professor,
School of Civil Engineering,
Engineering Campus,
Universiti Sains Malaysia,
14300 Nibong Tebal,
Seberang Perai Selatan,
Pulau Pinang

(NORITAH BT OMAR, PhD)

Deputy Dean,
School of Graduate Studies,
Universiti Putra Malaysia.

Date:

This thesis was submitted to the Senate of Universiti Putra Malaysia and has been accepted as fulfillment of the requirement for the degree of Master Science. The members of the Supervisory Committee were as follows:

Mohamed Azwan Mohamad Zawawi

Lecturer,
Faculty of Engineering,
Universiti Putra Malaysia
(Chairman)

HAFIZAN JUAHIR, PhD.

Associate Professor,
Faculty of Environmental Studies,
Universiti Putra Malaysia
(Member)

BUJANG BIN KIM HUAT, PhD.

Professor and Dean,
School of Graduate Studies,
Universiti Putra Malaysia.

Date:

Declaration by graduate student

I hereby confirm that;

- this thesis is my original work;
- quotations, illustrations and citations have been duly referenced;
- this thesis has not been submitted previously or concurrently for any other degree at any other institutions;
- intellectual property from the thesis and copyright of thesis are fully-owned by Universiti Putra Malaysia, as according to the Universiti Putra Malaysia (Research) Rules 2012;
- written permission must be obtained from supervisor and the office of Deputy Vice-Chancellor (Research and Innovation) before thesis is published (in the form of written, printed or in electronic form) including books, journals, modules, proceedings, popular writings, seminar papers, manuscripts, posters, reports, lecture notes, learning modules or any other materials as stated in the Universiti Putra Malaysia (Research) Rules 2012;
- there is no plagiarism or data falsification/fabrication in the thesis, and scholarly integrity is upheld as according to the Universiti Putra Malaysia (Graduate Studies) Rules 2003 (Revision 2012-2013) and the Universiti Putra Malaysia (Research) Rules 2012. The thesis has undergone plagiarism detection software.
