Abstract of the thesis presented to the Senate of Universiti Putra Malaysia in fulfilment of the requirement for the degree of Master of Science

**FRAMEWORK FOR EVALUATING PROGRAMMING LANGUAGES FOR
COMPUTER GRAPHICS**

By

AKRAM MOHAMMED ZEKI

November 2003

Chairman: Rahmita Wirza, Ph.D.

Faculty: Computer Science and Information Technology

With the continuous increase of the available programming languages over the last few decades, it becomes essential to properly select the language to be used for any field of computation so as to get the best outcome of the language for that specific field. As the fields of Computer Graphics and Computational Geometry are important ones, it becomes essential therefore to make a comparative study of the programming languages which suit those fields best.

In this study, a new framework has been developed for comparing different programming languages by studying selected factors which are: Speed, Memory usage, EXE file size and Source code size. The study concentrated on four programming languages in order to test the framework, although the developed framework is capable to support any programming language.

This study compares those features and the capabilities of the four widely used programming languages as samples. This comparison is for examining the programming languages in order to find the specific attributes and capabilities of each language, and to identify the best language for each of the selected factors when used for Computer Graphics and Computational Geometry.

The framework concludes that Visual C++ is the fastest language in handling Computational Geometry problems; C++ was the most efficient language in memory usage. Visual Basic has the smallest EXE file size and smallest source code size.

Small and simple programs consume less computer resources than bigger and more complicated programs. In order to test this logical hypothesis, the framework has been tested upon three types of programs varying in their levels of difficulties and complications, i.e. graphics primitives, curves and splines, and complicated geometric objects. The research proved that there is a difference between the three levels of programs in terms of computer resources consumption, hence proving that the hypothesis is correct. However the details of the comparison performed by the framework developed, when applied to the graphical programs of different level of complication has shown that different programming languages' reaction in terms of consumption of resources varies from one language to another.

Abstrak tesis dikemukakan kepada Senat Universiti Putra Malaysia sebagai memenuhi keperluan untuk ijazah Master Sains

**RANGKA KERJA BAGI MENILAI BAHASA-BAHASA PENGATURCARAAN
UNTUK GRAFIK KOMPUTER**

Oleh

AKRAM MOHAMED ZEKI

November 2003

Pengerusi : Rahmita Wirza, Ph.D.

Fakulti : Sains Komputer dan Teknologi Maklumat

Bilangan bahasa pengaturcaraan di pasaran mengalami peningkatan yang berterusan sejak beberapa dekad, lantas amat penting untuk memilih bahasa pengaturcaraan yang sesuai bagi memperoleh hasil terbaik dalam tugas yang spesifik dalam bidang pengkomputeran. Begitu juga bidang Grafik Komputer dan Geometri Komputan yang berkepentingan tinggi, kajian komparatif berkenaan bahasa-bahasa pengaturcaraan perlu dilakukan untuk menentukan bahasa yang paling sesuai digunakan untuk bidang tersebut.

Dalam kajian ini, satu rangka kerja telah dibangunkan untuk membuat perbandingan terhadap beberapa bahasa pengaturcaraan dengan mengkaji beberapa faktor pilihan iaitu: kepantasan, penggunaan ruang ingatan, saiz fail EXE dan juga saiz fail kod sumber. Walaupun kajian ini hanya menjurus kepada empat bahasa pengaturcaraan bagi menguji keupayaan rangka kerja yang dibangunkan, ia mampu menerima sebarang bahasa pengaturcaraan.

Kajian ini membandingkan ciri-ciri dan keupayaan empat bahasa pengaturcaraan yang digunakan secara meluas sebagai bahan sampel. Perbandingan ini bertujuan untuk mendapatkan atribut spesifik dan keupayaan setiap satunya bagi mengenal pasti bahasa yang terbaik berdasarkan faktor-faktor tertentu dalam kesesuaian penggunaan bahasa tersebut untuk Grafik Komputer dan Geometri Komputan.

Rangka kerja kajian memberikan kesimpulan bahawa Visual C++ adalah yang terpentas mengendalikan tugas dalam Geometri Komputan, manakala C++ pula merupakan yang paling efisien dalam penggunaan ruang ingatan. *Visual Basic* pula mempunyai saiz fail EXE dan kod sumber yang paling kecil.

Atur cara komputer yang mudah dan ringkas kurang menggunakan sumber komputer, berbanding atur cara yang besar dan kompleks. Untuk menguji hipotesis logikal ini, rangka kerja ini telah diuji berdasarkan tiga jenis atur cara yang berbeza tahap kerumitannya; misalnya primitif grafik, garis lengkung dan *spline*, dan objek geometri yang kompleks. Kajian yang dijalankan telah menunjukkan terdapat perbezaan dalam penggunaan sumber komputer antara ketiga-tiga tahap atur cara, lantas membuktikan hipotesis ini benar. Walau bagaimanapun, perincian berkenaan dengan perbandingan yang dilaksanakan berdasarkan rangka kerja ini, apabila diaplikasikan kepada atur cara grafik yang berlainan tahap kerumitannya telah menunjukkan reaksi penggunaan sumber komputer yang berbeza antara satu bahasa pengaturcaraan dengan yang lain.

ACKNOWLEDGEMENTS

First of all, Alhamdulillah for giving me the strength, patience, courage, and determination in completing this work.

I am very thankful to my supervisor Dr. Rahmita Wirza for her helpful guidance and suggestions. Her continuous encouragement was essential in completing this work. I also appreciate all the cooperations and suggestions from the committee members, Associate Professor Dr. Hajah Fatimah Dato' Ahmad, and Dr. Rozita Johari. Thanks to every person who supported me to complete this work.

I would like to thank my lovely parents for offering their full support and encouragement during my research. Not forgetting my brother Ahmed Mohammed Zeki and my uncle Dr. Abdulstar Mohammed for their helps and encouragements.

I am very grateful to the Faculty of Computer Science and Information Technology for offering the computing facilities. Lastly, I would like to give special thanks to the Malaysian Public Service Department for providing a partial financial support during my study under grant number: JPA 175/12/43-1.

AKRAM MOHAMMED ZEKI

November 2003

I certify that an Examination Committee met on date of viva to conduct the final examination of Akram Mohammed Zeki on his Master of Science thesis entitled "Evaluation of Different Programming Languages used in Graphics and Computational Geometry" in accordance with Universiti Pertanian Malaysia (Higher Degree) Act 1980 and Universiti Pertanian Malaysia (Higher Degree) Regulations 1981. The Committee recommends that the candidate be awarded the relevant degree. Members of the Examination Committee are as follows:

Md Nasir Sulaiman, Ph.D.

Associate Professor
Faculty of Computer Science and Information Technology
Universiti Putra Malaysia
(Chairman)

Rahmita Wirza, Ph.D.

Faculty of Computer Science and Information Technology
Universiti Putra Malaysia
(Member)

Fatimah Dato' Ahmad, Ph.D.

Associate Professor
Faculty of Computer Science and Information Technology
Universiti Putra Malaysia
(Member)

Rozita Johari, Ph.D.

Faculty of Computer Science and Information Technology
Universiti Putra Malaysia
(Member)

GULAM RASUL RAHMAT ALI, Ph.D.

Professor/Deputy Dean
School of Graduate Studies
Universiti Putra Malaysia.

Date :

This thesis submitted to the Senate of Universiti Putra Malaysia has been accepted as fulfilment of the requirement for the degree of Master of Science. The members of the Supervisory Committee are of follows:

Rahmita Wirza, Ph.D.

Faculty of Computer Science and Information Technology
Universiti Putra Malaysia
(Chairman)

Fatimah Dato' Ahmad, Ph.D.

Associate Professor
Faculty of Computer Science and Information Technology
Universiti Putra Malaysia
(Member)

Rozita Johari, Ph.D.

Faculty of Computer Science and Information Technology
Universiti Putra Malaysia
(Member)

AINI IDERIS, Ph.D.

Professor/Dean,
School of Graduate Studies
Universiti Putra Malaysia.

Date:

DECLARATION

I hereby declare that the thesis is based on my original work for quotations and citations which have been duly acknowledged. I also declare that it has not been previously or concurrently submitted for any other degree at UPM or other institutions.
