Abstract of thesis presented to the Senate of Universiti Putra Malaysia in fulfilment of the requirement for the degree of Master of Science

**MORPHOLOGICAL AND ANATOMICAL VARIATIONS  
AMONG THE GENERA OF GLEICHENIACEAE**

By

**CHIN LEA YEN**

**August 2006**

**Chairman:** Associate Professor Rusea Go, PhD

**Faculty:** Science

A research of morphological and anatomical variation among the genera of Gleicheniaceae in Peninsular Malaysia was carried out from June 2003 to May 2005. Eighteen species of Gleicheniaceae (including 9 varieties) from 4 genera namely 9 species of *Dicranopteris*, 3 species of *Diplopterygium*, 3 species of *Gleichenia* and 3 species of *Sticherus* had been examined. These ferns were collected from the fringes of the Lowland Dipterocarp Forest (LDF), Hill Dipterocarp Forest (HDF), Lower Montane Forest (LMF) and Upper Montane Forest (UMF). All species of Gleicheniaceae are sun-ferns that grow well on poor clay soils or nutrient poor soil with small demand of mineral substances. They make adaptation by their creeping rhizomes and by the indefinite growth of the fronds that form thickets. Morphological studies including frond architecture and study of stipe anatomy were conducted, as they are taxonomically significant for delimiting genera and species within Gleicheniaceae. Six types of frond architecture (including the modification from the basic) were observed in this study with each corresponding to a distinct genus and also to certain species. Furthermore, the characters of the dermal appendages (hairs and scales) at the stipe, costae and costules of the lamina segments are found to be significant for delimiting of species in the genera. The

presence of additional branches and the shape of pseudostipules, size, texture, the condition of the upper or lower surface of the lamina segments and venation pattern were the basis for the classification of genera and some species. The stipe anatomy revealed that Gleicheniaceae has three types of vascular bundle in the stele. The C-shaped form was found in genera *Dicranopteris* (excluding *D. linearis* var. *linearis*), *Diplopterygium* and *Sticherus*; circular-shaped vascular bundle was found in genus *Gleichenia* whereas D-shaped vascular bundle was found in only one species of *Dicranopteris*, namely the *D. linearis* var. *linearis*. The features such as the distribution of endodermis, different width of the adaxial gap, different forms of the adaxial hooks and different amount and distribution of xylem and protoxylem groups are important for identification. Variation in the vascular bundle of Gleicheniaceae was found to be taxonomically significant at the genus and species levels.

Abstrak tesis yang dikemukakan kepada Senat Universiti Putra Malaysia sebagai memenuhi keperluan untuk ijazah Master Sains

**MORFOLOGI DAN VARIASI ANATOMI  
TERHADAP GENERA FAMILI GLEICHENIACEAE**

**Fakulti:** Sains

Kajian morfologi dan anatomi batang terhadap paku-pakis bagi famili Gleicheniaceae telah dijalankan di Semenanjung Malaysia antara Jun 2003 hingga Mei 2005. Daripada kajian ini, sejumlah 18 spesies termasuk 9 varieti Gleicheniaceae yang tergolong dalam empat genera yang bernama *Dicranopteris* (9 spesies), *Diplopterygium* (3 spesies), *Gleichenia* (3 spesies) dan *Sticherus* (3 spesies) telah diteliti. Paku-pakis ini biasanya ditemui di pinggiran Dipterokarp tanah pamah (LDF), Dipterokarp peringkat tinggi (HDF), hutan hujan gunung peringkat rendah (LMF) dan hutan hujan gunung peringkat tinggi (UMF). Semua spesies Gleicheniaceae suka terhadap pendedahan cahaya matahari; hidup subur di tanah liat atau tanah yang kurang nutrien serta keperluannya terhadap nutrien adalah sedikit. Ia membentuk semak atau belukar yang tebal dengan pengubahsuaian rizomnya yang menjalar serta pertumbuhan pelepah yang berulang-ulang. Kajian morfologi termasuk corak percabangan serta kajian anatomi batang telah dijalankan adalah bererti secara taksonomi untuk membatas atau membezakan genus dan spesies Gleicheniaceae. Enam jenis corak percabangan (termasuk modifikasi daripada yang asas) telah dikenalpasti daripada kajian ini dan setiap satu dapat

memberikan gambaran yang jelas kepada genus ataupun sesetengah spesies. Tambahan pula, kehadiran rambut atau/ dan sisik pada batang, urat tengah dan petiol pada daun adalah ciri-ciri taksonomi penting bagi spesies dalam genera. Kehadiran cabangan daun tambahan, rupa bentuk “pseudostipules”, tekstur, saiz, rupa bentuk dan keadaan permukaan atas dan bawah daun urat daun merupakan ciri asas bagi pengelasan genera dan beberapa spesies. Kajian anatomi batang pula menunjukkan bahawa Gleicheniaceae mempunyai tiga jenis bentuk berkas vaskular dalam stel iaitu bentuk-C dalam genera *Dicranopteris* (selain *D. linearis* var. *linearis*), *Diplopterygium* dan *Sticherus*, bentuk hampir bulat dalam genus *Gleichenia* manakala bentuk-D hanya dijumpai pada satu species *Dicranopteris* iaitu *D. linearis* var. *linearis*. Dalam berkas vaskular, ciri-ciri seperti taburan lapisan endodermis, rupa bentuk dan perbezaan kelebaran pada bahagian bawah jurang dan lingkaran serta bilangan dan bentuk xilem dan protoxilem juga memainkan peranan penting dalam pengecaman. Variasi pada berkas vaskular batang dalam Gleicheniaceae didapati bererti secara taksonomi di tahap genus dan spesies.

## **ACKNOWLEDGEMENTS**

The collection of materials and successful completion of my Master of Science project was only possible with the help, advice, encouragement and great support of people in my life and God's blessing.

My deepest gratitude goes to my supervisor, Associate Professor Dr. Rusea Go for her guidance, invaluable advice, patience and continuous support. I also wish to express my sincere appreciation to member of the thesis committee, Dr. Hishamuddin Omar for his constructive comments and assistance during the entire course of the study.

I am very grateful and thankful to Associate Professor Dr. Japar Sidik Bujang, Deputy Dean (Academic), Faculty of Science, UPM; Professor Dr. Ruth Kiew (SING); Dr. Saw Leng Guan (KEP); Dr. Kamarudin Mat Salleh (UKMB); Mr. Razali Jaman (UKMB); Dr. Wong Khoon Meng (KLU), for their favours and help in one way or another. I also wish to extend my gratitude to Dr. Benjamin Øllgaard, from Institute of Biological Sciences, University of Aarhus, Denmark, for his opinion and kindness in providing reference materials.

I am deeply indebted to the staff of the Anatomy Lab, Department of Biology (UPM), En. Hassan Omar and Ms. Lam Shiau Lee for guiding me how to prepare the solutions for my research work. Without their help, it would have been impossible to complete this study.

My appreciation also goes to Abang Man and Kak Latifah for their guidance, kindness and help. Special thanks are directed to the members of the Herbarium, Biology Department (UPM) and my dearest friends, Ms. Wendy Yong Sze Yee, Mr. Joanes Unggang, Mr. Claysius Kongoi, Mr. Azhar Abu Bakar, Ms. Phoon Sook Ngoh, Ms. Toong Yet Han, Mr. Tang Cher Hing, Mr. Michael Lim Yee Liang, Ms. Serena Lee, Ms. Cheong Wei Ling, Ms. Racheal Ling Jinn, Ms. Chai Yie Ping, Ms. Lee Lek Yan, Ms. Loh Ming, Ms. Christina Yong Sook Yien, Mr. Chua Bok Hui, Mr. Tee Meng Han, Mr. Lee Kok Leon and Mr. Julsun for their moral support, concern and generous assistance in various ways throughout this study.

Nevertheless, heartfelt appreciation to my beloved parents, brother and sister, who have supported me throughout the course of my graduate program. Their love, care and understanding me toward the completion of this thesis.

Last but not least, I gratefully acknowledge IRPA Project-Diversity and Conservation of Fern-Allies and Primitive Ferns in Malaysia (Project Number 08-02-04-0025) and Short-Term Research Grant Year 2001 UPM (Pusat Kos 51275) for supporting this study.

I certify that an Examination Committee met on 24<sup>th</sup> August 2006 to conduct the final examination of Chin Lea Yen on her degree of Master of Science thesis entitled "Morphological and Anatomical Variations Among The Genera of Gleicheniaceae" in accordance with Universiti Pertanian Malaysia (Higher Degree) Act 1980 and Universiti Pertanian Malaysia (Higher Degree) Regulations 1981. The Committee recommends that the candidate be awarded the relevant degree. Members of the Examination Committee are as follows:

**Tan Soon Guan, PhD**

Professor  
Faculty of Science  
Universiti Putra Malaysia  
(Chairman)

**Misri Kusnan, PhD**

Professor  
Faculty of Science  
Universiti Putra Malaysia  
(Internal Examiner)

**Umi Kalsom Yusuf, PhD**

Professor  
Faculty of Science  
Universiti Putra Malaysia  
(Internal Examiner)

**Haji Mohamed Abdul Majid, PhD**

Professor/ Dean  
Faculty of Science  
Universiti Malaya  
(External Examiner)

School of Graduate Studies  
Universiti Putra Malaysia

Date: 18 JANUARY 2007

This thesis submitted to the Senate of Universiti Putra Malaysia and has been accepted as fulfilment of the requirement for the degree of Master of Science. The members of the Supervisory Committee are as follows:

**Rusea Go, PhD**

Associate Professor

Faculty of Science

Universiti Putra Malaysia

(Chairman)

**Hishamuddin Omar, PhD**

Lecturer

Faculty of Science

Universiti Putra Malaysia

(Member)

---

**AINI IDERIS, PhD**

Professor/Dean

School of Graduate Studies

Universiti Putra Malaysia

Date: 8 FEBRUARY 2007

## **DECLARATION**

I hereby declare that the thesis is based on my original work except for quotations and citations which have been duly acknowledged. I also declare that it has not been previously or concurrently submitted for any other degree at UPM or other institutions.
