**FLOOD MODELLING OF THE DEZ RIVER BASIN, IRAN, USING THE
WATERSHED MODELING SYSTEM SOFTWARE**

By

SEYEDEH SARA SADROLASHRAFI

September 2008

Chair: Associate Professor Dr. Thamer Ahmed Mohamed, PhD

Faculty: Engineering

Flood is one of the natural disasters which can take place in many areas. In this research, a framework which integrates the Geographic Information System (GIS) with the Watershed Modelling System (WMS) for flood modelling was developed. It also interconnects the terrain models and the GIS software, with standard hydrological and hydraulic models, including HEC-1, HEC-RAS, etc. The Dez River Basin (about 16213 km²) in Khuzestan province in Iran was the study area in view of the frequent occurrences of severe flash flooding. Three storms which had caused floods in, January 1993, March 1993 and December 2001 were chosen to examine the modelling framework. The WMS is found to be capable of flood modelling and producing flood map. Hydrologic models can be integrated with HEC-RAS for a complete flood plain analysis in the WMS Package. The model consists of a rainfall-runoff model (HEC-1) which converts excess precipitation to overland flow and channel runoff; watershed parameters are calibrated manually to perform a good simulation of discharge at three sub-basins. Also statistical analysis had been done for

hydrologic model and the model efficiency found to be 50%- 97%. Steady state flow simulation was performed in HEC-RAS model through the river channel network based on the HEC-1, peak hydrographs. Error in prediction of water surface levels was found to be less than 5%. Based on hydrologic and hydraulic simulations, Flood hazard maps for floods recorded January (1993), March (1993) and December (2001) are produced for the Dez River Basin based on the state-of-the-art GIS in the WMS software. Finally, a sensitivity analysis of the model parameters was performed and the most sensitive parameters identified are Curve Number (CN) and initial rainfall abstraction (STRTL) respectively. The modelling framework presented in this study demonstrates the accuracy and usefulness of the WMS software for flash flooding control in semi arid region. The results of this research will benefit future modelling efforts by providing validated hydrological software to forecast flooding on a regional scale. This model was designed for the Dez River Basin, and this regional scale model could be used as a prototype for the model applications in other areas.

Keywords:

WMS, GIS, Rainfall-Runoff, flood modelling, Flood hazard map

Abstrak tesis yang dikemukakan kepada Senat Universiti Putra Malaysia sebagai memenuhi keperluan untuk ijazah Master Sains

**PEMODELAN BANJIR DEZ RIVER BASIN, IRAN, DENGAN
MENGUNAKAN PERISIAN WATERSHED MODELING SYSTEM**

Oleh

SEYEDEH SARA SADROLASHRAFI

September 2008

Pengerusi: Profesor Madya Dr. Thamer Ahmed Mohamed, PhD

Fakulti: Kejuruteraan

Banjir adalah salah satu dari kejadian bencana alam yang melanda banyak tempat. Dalam kajian ini, satu rangkakerja untuk permodelan banjir akan dibangunkan yang menggabungkan Sistem Maklumat Geografi (GIS) dan Watershed Modeling System (WMS) dan hubungkait antara model rupabumi dan perisian sistem maklumat geografi beserta piawaian komersial hidrologi dan perisian-perisian hidraulik termasuk HE-1, HEC-RAS dan sebagainya. Lembangan Sungai Dez (lebih kurang 1613 km²) terletak di Wilayah Khuzestan, Iran telah dipilih sebagai lokasi kajian memandangkan ia sering mengalami banjir kilat yang agak serius. Sebagai kajian kes, 3 situasi hujan yang telah mengakibatkan kejadian banjir pada, Januari, 1993, Mac, 1993 dan Disember, 2001 telah dipilih untuk menguji rangkakerja yang dibentuk. WMS berpaya untuk digunakan dalam permodelan banjir dan boleh menghasilkan peta risiko banjir. Model hidraulik boleh diintegrasikan dengan HEC-RAS untuk analisa lembangan sungai yang lengkap menggunakan pakej WMS. Model tersebut terdiri dari model hujan-air larian (HEC-1) yang berupaya untuk

mengira lebih hujan kepada air larian permukaan dan aliran dalam saluran; parameter lembangan ditentukan secara manual untuk menghasilkan simulasi kadar luahan pada 3 sub-lembangan. Dah juga analisis statistik telah dijalankan untuk model hidrologik dan model tersebut menunjukkan kecekapannya adalah dari 50% - 97%. Simulasi aliran seragam dilakukan dengan model HES-RAS untuk rangkaian sungai berdasarkan HEC-1, hidrograf puncak. Ralat dalam jangkaan aras permukaan air adalah kurang daripada 5%. Sebagai tambahan, peta-peta zon banjir untuk Lembangan Sungai Dez berdasarkan keputusan model hidraulik telah dilakukan pada Januari (1993), March (1993) dan December (2001) dengan menggunakan GIS digabungkan dalam perisian WMS. Akhirnya, ujian kepekaan parameter model telah dilakukan untuk mengenalpasti parameter yang terpenting yang memberikan impak keputusan kepada model tersebut. Rangkai permodelan yang dijelaskan didalam kajian ini menunjukkan ketepatan dan kegunaan perisian WMS untuk mengawal kejadian banjir kilat. Hasil kajian ini adalah diharapkan boleh mendatangkan manfaat untuk usaha permodelan banjir dengan menyediakan perisian hidrologi yang tepat untuk meramal banjir dengan skala yang besar. Model yang dibangunkan untuk lembangan Sungai Dez, adalah diharapkan dapat digunakan sebagai prototaip untuk digunakan di lokasi lain.

Kata Kunci:

WMS, GIS, Hujan-larian, Permodelan banjir, Peta risiko banjir.

DEDICATION

*This dissertation is dedicated
to my parents ... your essence is in everything I accomplish.
to my husband for his love and patience.*

ACKNOWLEDGEMENTS

My prayerful thanks to my Merciful God, source of all knowledge and wisdom, who gives me every thing I have. You have made my life more bountiful. May your name be exalted, honored, and glorified.

It is a pleasure to thank the many people who have contributed to my successful conclusion of this thesis. First I must express my sincere appreciation to my supervisor, Dr. Thamer Ahmed Mohamed for his guidance, encouragement and continuous support throughout this research. Special thanks go to my co-supervisor Dr. Ahmad Rodzi b. Mahmud for his valuable comments, recommendations, kindness and contribution. I am also grateful to Dr. Majid Kholghi Associate professor and Head of Water Resources Eng. Division, Soil and Water Eng. Faculty- University of Tehran- Iran for his valuable assistance.

I would like to give special thanks to Engineer Amir Samadi who is a PhD candidate in Tehran University for showing me the passion in the search of meaningful ways to better incorporate science in engineering practice. His extensive knowledge, vision and creative thinking have been the source of inspiration for me to accomplish this work. Without his help I would not have had the opportunity to work on such a challenging and valuable project. Also thanks to all the staff and student members of the Faculty of soil and Water Engineering of the University of Tehran.

I have spent nice moments in my second country, Malaysia, with people from different cultures and religions who live together in peace. I would like to thank the people of Malaysia, whom I have learned a lot from them.

Thanks are also extended to Nooshin, Sanaz and Samaneh for keeping me sane, putting up with me and being the best of friends that any one can ask for. I would like to thank Mehrnaz, Mohammad and Sina my great sister and brothers and my mother in law Mahnaz for their support. I also would like to mention about the most wonderful part of my life, my beloved husband Sahand Enamzadeh, for his love, encouragement, patience and understanding during the good and bad times. Without his sacrifice, this work would have not been possible.

Last but not the least I must give thanks to my parents who have taught me to succeed and for their constant love, patience, calmness, encouragement and belief in me all these years. They are my best counselors in my life. I owe my maturity and so much more to both. Thank you mom and dad for your kindness, smiles and supports. I love you and I am always proud of you.

I certify that an Examination Committee has met on 25 September 2008 to conduct the final examination of **Syedeh Sara Sadrolashrafi** on her **Master of Science** thesis entitled “**Integrated Modelling for Flood Mapping for Arid Region Using Watershed Modelling System**” in accordance with Universiti Pertanian Malaysia (Higher Degree) Act 1980 and Universiti Pertanian Malaysia (Higher Degree) Regulations 1981. The Committee recommends that the student be awarded the Master of Science.

Members of the Examination Committee were as follows:

Abdul Halim Ghazali, PhD

Associate Professor
Faculty of Engineering
Universiti Putra Malaysia
(Chairman)

Mohd Amin Mohd Soom, PhD

Professor
Faculty of Engineering
Universiti Putra Malaysia
(Internal Examiner1)

Lee Teang Shui, PhD

Professor
Faculty of Engineering
Universiti Putra Malaysia
(Internal Examiner2)

Othman A. Karim, PhD

Professor
Information Technology Center
Universiti Kebangsaan Malaysia
(External Examiner)

HASANAH MOHD. GHAZALI, PhD

Professor and Deputy Dean
School of Graduate Studies
Universiti Putra Malaysia

Date:

This thesis was submitted to the Senate of Universiti Putra Malaysia and has been accepted as fulfilment of the requirement for the degree of **Master of Science**. The members of supervisory committee were as follows:

Thamer Ahmed Mohamed, PhD

Associate Professor
Faculty of Engineering
Universiti Putra Malaysia
(Chairman)

Ahmad Rodzi b. Mahmud, PhD

Associate Professor
Faculty of Engineering
Universiti Putra Malaysia
(Member)

HASANAH MOHD. GHAZALI, PhD

Professor and Dean
School of Graduate Studies
Universiti Putra Malaysia

Date: 18 December 2008

DECLARATION

I declare that the thesis is based on my original work except for quotations and citations which have been duly acknowledged. I also declare that it has not been previously, and is not concurrently, submitted for any other degree at Universiti Putra Malaysia or at any other institution.
