of the requirement for the degree of Doctor of Philosophy

**VOCABULARY LEARNING STRATEGIES, VOCABULARY
KNOWLEDGE AND READING COMPREHENSION OF EFL
UNDERGRADUATE STUDENTS IN IRAN**

By

REZA KAFIPOUR

May 2010

Chairman: Dr. Nooreen Bt Noordin,

Faculty: Educational Studies

The current study investigated the relationship among vocabulary learning strategies, vocabulary knowledge, and reading comprehension of Iranian undergraduate EFL students. In addition, the study tried to find the contribution of vocabulary learning strategies to vocabulary size and reading comprehension of the students. Fars province was selected according to cluster sampling. Data were collected from all 250 second year undergraduate EFL students. The collection of data was done in two different phases – quantitative and qualitative. In the quantitative phase of the study, the data were collected through a vocabulary learning strategy questionnaire adapted from Bennett (2006). A vocabulary size test developed by Nation (2007) and a TOEFL reading comprehension test were also used in the study. Data were also collected through interviews and journal writing in the qualitative phase of the study. Descriptive statistics showed that Iranian undergraduate EFL learners were medium strategy users. All different categories of

vocabulary learning strategies were reported to be used at a medium level. However, the most frequently used strategies consisted of using monolingual dictionary, guessing meaning from context, connecting the word to its synonyms and antonyms, using new words in sentences, studying the sound of a word, using English language media, skipping or passing new words, repeating verbally, and taking note or highlighting. The least frequently used strategies included checking for L1 cognate, writing paraphrase using several new words, using physical action when learning a word, making word lists, studying the word with classmates, interacting with native speakers, and asking the teacher to check one's definition. The students were found to have a vocabulary size of 5564 words. Then, Pearson Product Moment Correlation was conducted to find the relationships between variables. The Pearson correlation showed a positive correlation between vocabulary size and reading comprehension of the students. A positive correlation was also found between 14 vocabulary learning strategies and vocabulary size. However, multiple regressions showed that only 9 out of 14 strategies contributed to vocabulary size of the students. These strategies consisted of using physical action when learning a word, interacting with native speakers, taking note or highlighting, studying new words many times, using bilingual dictionary, using English language media, studying the word with classmates, studying the sound of a word, and repeating the word verbally. Pearson correlation also indicated positive correlation existed between 23 vocabulary learning strategies and reading comprehension. However, 5 out of 23 strategies were found to contribute to reading comprehension of the students. These strategies consisted of taking note or highlighting, using physical action when learning a word, asking the teacher to paraphrase or give synonym of new words,

asking classmates for meaning, and remembering the word using its affixes and roots.

Abstrak tesis yang dikemukakan kepada Senat Universiti Putra Malaysia sebagai memenuhi keperluan untuk ijazah Doktor Falsafah

**STRATEGI PEMBELAJARAN PERBENDAHARAAN KATA,
PENGETAHUAN PERBENDAHARAAN KATA DAN KEFAHAMAN
MEMBACA BAHASA INGGERIS SEBAGAI BAHASA ASING OLEH
PELAJAR IJAZAH SARJANA MUDA DI IRAN**

Oleh

Pengerusi: Dr. Nooreen Bt Noordin

Fakulti: Pengajian Pendidikan

Kajian ini telah menyiasat hubungan di antara strategi pembelajaran perbendaharaan kata, pengetahuan perbendaharaan kata dan kefahaman dalam kalangan pelajar ijazah sarjana muda Bahasa Inggeris sebagai Bahasa Asing Iran. Seterusnya, kajian ini juga cuba mencari sumbangan strategi pembelajaran perbendaharaan kata ke atas saiz perbendaharaan kata dan pemahaman kefahaman di kalangan pelajar tersebut. Daerah Fars telah dipilih secara persampelan kelompok. Data telah dikumpulkan daripada kesemua 250 pelajar pra-siswazah tahun kedua yang mengikuti Bahasa Inggeris sebagai Bahasa Asing. Pengumpulan data dilakukan dalam dua fasa – kuantitatif dan kualitatif. Dalam fasa kuantitatif, data telah dikumpul melalui satu soal selidik strategi pembelajaran perbendaharaan kata yang diadaptasikan daripada Bennet (2006). Satu ujian saiz perbehendaraan kata yang dibangunkan oleh Nation (2007) dan ujian kefahaman bacaan TOEFL juga telah digunakan dalam kajian ini. Pengumpulan data juga telah dijalankan melalui temubual dan penulisan jurnal

dalam fasa kualitatif kajian. Statistik deskriptif menunjukkan bahawa pelajar prasiswa Bahasa Inggeris sebagai Bahasa Asing dari Iran adalah pengguna strategi sederhana. Kesemua kategori pembelajaran strategi perbendaharaan kata yang berlainan dilaporkan digunakan pada tahap sederhana. Bagaimanapun, strategi-strategi yang paling kerap digunakan terdiri daripada penggunaan kamus satu bahasa (*monolingual*), meneka makna perkataan daripada konteks, menghubungkan kait perkataan dengan sinonim dan antonim, menggunakan perkataan baharu dalam ayat-ayat, mengkaji bunyi sesuatu perkataan, menggunakan media dalam bahasa Inggeris, melangkaui perkataan-perkataan baharu, mengulang secara lisan, dan membuat catatan atau menyerlahkannya. Antara strategi yang paling kurang digunakan adalah membuat kaitan dengan Bahasa Ibunda, menulis parafrasa menggunakan beberapa perkataan lain, menggunakan aksi fizikal semasa mempelajari perkataan baharu, mempelajari perkataan bersama-sama dengan rakan kelas, berinteraksi dengan pentutur bahasa pertama, dan mendapatkan guru untuk menyemak definisi yang dibuat. Para pelajar didapati mempunyai saiz perbendaharaan kata sebanyak 5564 perkataan. Korelasi Produk Momen Pearson telah dijalankan untuk mengenal pasti hubungan antara pembolehubah. Korelasi Pearson menunjukkan hubungan positif di antara saiz perbendaharaan kata dan pemahaman bacaan pelajar-tersebut. Turut didapati ada hubungan yang positif antara 14 strategi pembelajaran perbendaharaan kata dengan saiz perbendaharaan kata. Bagaimanapun, analisis Regresi Berbilang menunjukkan bahawa hanya 9 daripada 14 strategi menyumbang kepada saiz perbendaharaan kata pelajar. Strategi-strategi tersebut adalah menggunakan aksi fizikal semasa mempelajari sesuatu perkataan, berinteraksi dengan pentutur bahasa pertama, membuat catatan atau menyerlahkannya, mempelajari perkataan baharu acap kali, menggunakan kamus dwibahasa, menggunakan media bahasa Inggeris,

mempelajari perkataan bersama-sama dengan rakan kelas, mengkaji bunyi sesuatu perkataan, dan mengulang perkataan secara lisan. Korelasi Pearson juga menunjukkan korelasi positif wujud antara 23 strategi pembelajaran perbendaharaan kata dan pemahaman bacaan. Bagaimanapun, 5 daripada 23 strategi didapati menyumbang kepada pemahaman bacaan para pelajar tersebut. Strategi-strategi ini terdiri daripada membuat catatan atau menyerlahkannya, menggunakan aksi fizikal semasa mempelajari sesuatu perkataan, mendapatkan bantuan guru untuk memparafrasa atau memberi sinonim perkataan baharu, bertanya makna perkataan pada rakan sekelas, dan mengingat perkataan menggunakan imbuhan dan kata dasar.

ACKNOWLEDGEMENTS

I would like to express my profound gratitude to Dr. Nooreen Bt Noordin, chairman of supervisory committee for her invaluable help, insightful suggestions, and constructive criticism without which the completion of this investigation would not have been possible. It is a great pleasure to declare my special appreciation to Prof. Dr. Kamariah Abu Bakar and Dr. Roselan Bin Baki, supervisory committee members, who generously read the manuscript and provided me with careful comments. Likewise, many thanks are due to Assoc. Professor Dr. Mohd. Sahandri Gani Hamzah whose guidance in data analysis and statistics greatly improved the quality of my thesis.

I certify that a Thesis Examination Committee has met on 21st of May 2010 to conduct the final examination of Reza Kafipour on his thesis entitled “**Vocabulary learning strategies, vocabulary knowledge, and EFL reading comprehension of undergraduate students in Iran**” in accordance with the Universities and University Colleges Act 1971 and the Constitution of the Universiti Putra Malaysia [P. U.(A) 106] 15 March 1998. The committee recommends that the student be awarded the Doctor of Philosophy.

Members of the Thesis Examination Committee were as follows:

Arshad Abd Samad, PhD

Associate Professor
Faculty of Educational Studies
Universiti Putra Malaysia
(Chairman)

Ghazali Mustapha, PhD

Faculty of Educational Studies
Universiti Putra Malaysia
(Internal Examiner)

Jayakaran Mukundan, PhD

Associate Professor
Faculty of Educational Studies
Universiti Putra Malaysia
(Internal Examiner)

Brian Tomlinson, PhD

Professor
School of Languages
Leeds Metropolitan University
(External Examiner)

BUJANG KIM HUAT, PHD

Professor and Deputy Dean
School of Graduate Studies
Universiti Putra Malaysia

Date:

This thesis was submitted to the Senate of Universiti Putra Malaysia and has been accepted as a fulfilment of the requirement for the degree of Doctor of Philosophy. The members of the Supervisory Committee were as follows:

Nooreen Bt. Noordin, PhD
Faculty of Educational Studies
Universiti Putra Malaysia
(Chairman)

Kamariah Abu Bakar, PhD
Professor
Faculty of Educational Studies
Universiti Putra Malaysia
(Member)

Roselan Baki, PhD
Faculty of Educational Studies
Universiti Putra Malaysia
(Member)

HASANAH MOHD GHAZALI, PhD
Professor and Dean
School of Graduate Studies
Universiti Putra Malaysia

Date: 12 August 2010

DECLARATION

I declare that the thesis is my original work except for quotations and citations which have been duly acknowledged. I also declare that it has not been previously, and is not concurrently, submitted for any other degree at Universiti Putra Malaysia or at any other institution.

CHAPTER ONE

INTRODUCTION

1.1 Background

Vocabulary acquisition used to be a neglected aspect of language learning. In recent years, however, interest in this area has grown enormously. Teachers, publishers and researchers are paying more attention to this aspect of language learning. Language teachers and researchers have been keen in searching for effective approaches to enhance vocabulary acquisition. Acquisition is defined as more than familiarity with the form and meaning, but also the ability to use a vocabulary item in a given context (Nation 2001; Read 2000).

Nowadays, efforts to help learners to enhance and improve their method of vocabulary learning have been made in different ways. Sokmen (1997:225) talks about helping students learn how to learn vocabulary independently, noting it is “not possible for students to learn all the vocabulary they need in the classroom”. Cunningsworth (1995: 38) considers helping students to build and develop their own vocabulary learning strategies as “a powerful approach”. This approach can be depended on “sensitization to the systems of vocabulary, encouragement of sound dictionary skills and reflection on effective learning techniques”. Regarding significance of vocabulary learning strategies, it is quite useful to identify what vocabulary learning strategies are and how they contribute to the learners’ vocabulary, and what strategies text book developers should include in the books.

It should be mentioned that second language (L2) acquisition depends crucially on the development of a strong vocabulary. In the second language acquisition (SLA) sub-discipline known as second language vocabulary acquisition (SLVA), researchers have focused their attention on the need for second language learners to optimize their vocabulary knowledge (Singleton, 1999; Schmitt, 2000). Vocabulary learning strategies are even more important than language learning strategies in second language (L2) learning (Ahmed, 1989; Schmitt, 1997; Kojic-Sabo & Lightbown, 1999) with the incremental nature of vocabulary acquisition and its emphases on enormous exposure to the language. In order to develop an ever-improving capability to learn and use English effectively, learners need to develop appropriate strategies for lifelong learning.

Vocabulary learning strategies (VLS) are a part of language learning strategies which are receiving more attention since the late 1970s and their investigation has advanced our understanding of the processes learners use to develop their skills in a second or foreign language. Oxford (1990) defines learning strategies as specific actions taken by the learner to make learning easier, faster, more enjoyable, more self-directed, more effective, and more transferable to new situations. Cohen (1998) highlights the conscious choice factor is important to language learning strategy concept because the element of consciousness is what distinguishes strategies from those processes that are not strategy. Instead of simply describing learning strategies as what strategies the learners prefer or what the learners like, which relates more to learner characteristics and learning style, language learning strategy is regarded as specific actions taken by learners consciously for the purpose of learning a language. Indeed, Nation (2001, p.217) has taken this conscious choice factor into account

when defining vocabulary learning strategies. A strategy would need to a) involve choice, that is, there are several strategies to choose from; b) be complex, that is, there are several steps to learn; c) require knowledge and benefit from training; and d) increase the efficiency of vocabulary learning and vocabulary use.

Nation (2001) presented useful ways to investigate vocabulary activities in text books. He emphasized on the significance of direct teaching of various vocabulary learning strategies in order to increase the students' knowledge toward vocabulary and also encourage them to utilize them actively. Therefore, text books should consist of different types of vocabulary learning strategies to enable the learners to enhance their receptive and productive vocabulary skills.

1.2 Problem Statement

Learning a second language involves the manipulation of four main skills; speaking, writing, listening and reading, which lead to effective communication. One crucial factor is the amount of vocabulary one possesses as vocabulary forms the biggest part of the meaning of any language (McCarthy, 2001). Vocabulary, however, is the biggest problem for most learners. In view of this, vocabulary acquisition is currently receiving attention in second language pedagogy and research. But it is still a contentious issue how learners acquire vocabulary effectively and efficiently or how it can best be taught.

The importance of vocabulary learning strategies specifically in the field of foreign /second language learning should be examined seriously. Although a lot of studies

have been conducted in recent years about the vocabulary learning strategies used by native language learners, little attention has been given to EFL. Moreover, most of the studies done so far focus on general language learning strategies. Not enough attention has been paid to vocabulary learning strategies as the most important part of communication and the relationship between vocabulary learning strategies and variables such as learning styles, aptitude, attitude, personality types, and vocabulary size especially in Iran. Moreover, a clear guideline on how vocabulary is learned effectively is still lacking. Few studies have been done on vocabulary in the Iranian context. It shows that vocabulary as an important part of language learning has been neglected so far. One of the few studies found on vocabulary was related to Akbari's (2008) research. It is more on vocabulary teaching rather than vocabulary learning strategies.

In addition, nowadays, many teachers are struggling to change their teaching style from old methods like grammar translation method to new methods such as communicative approach. This is the reason why the study of teaching strategies is very popular among teachers (Oxford, 1997). However, few studies tried to investigate learning strategies instead of teaching strategies. In the studies of learning strategies, the researcher focuses on the students themselves. In spite of the efforts made by EFL instructors, text book writers, and curriculum designers in most Asian countries, the classroom environment cannot be changed from teacher-centered to students-centered one (Schmitt, 1997). It is only in a few cases that they succeed in making a student-centered classroom environment where they often use methods and materials that have been developed with the learning needs of native speakers of English in mind. In many cases, neither students nor teachers are aware that

difficulty in learning class material, high frustration levels, and even failure may not rest solely in the material itself.

Vocabulary is generally given little emphasis in the university curriculum in Asian countries (Fan, 2003). The situation is the same in Iran as an Asian country. Generally, the emphasis on English teaching in universities in Asian countries is on the four language skills. Vocabulary teaching in many classrooms is largely incidental (Fan, 2003; Catalan, 2003). This means that when a particular word or phrase appears difficult for the students, they are told the definitions. Occasionally, this may be supplemented with the collocations of the target words or information about how the words are used, for example, whether they are used to express negative emotions or whether the word is used in formal situations etc. More often, however, finding out about new vocabulary items is left to the discretion of the students, and they are encouraged to turn to dictionaries to look up for meanings of words (Catalan, 2003). Catalan continues that vocabulary learning is, therefore, largely ad hoc and very dependent on the efforts of the teachers and students. This ad hoc approach to vocabulary learning may lead to a general inadequacy in vocabulary knowledge among Asian university students. As Fan (2003) states this inadequacy has been repeatedly pointed out by the researchers and lecturers as one of the factors in the unsatisfactory performance of students in their exams. He continues that the inadequacy in lexical knowledge may hinder students' proficiency development and affect their performances in public exams. It is high time for teachers to look into ways to enhance vocabulary knowledge in university students. Another problem in vocabulary learning as pointed out by Laufer (2003) is related to this point that many of learners have a habit of matching English words with their
