March 2010

Chairman : Gwendoline Ee Cheng Lian, PhD
Faculty : Science

Chemical investigation of Artocarpus kemando and Artocarpus odoratissimus have resulted in the isolation of ten compounds, three of which are new. All the pure metabolites were purified by means of chromatographic method and their structures were determined from modern spectroscopic identification such as one-dimensional nuclear magnetic resonance spectroscopy, two-dimensional nuclear magnetic resonance spectroscopy, infrared spectroscopy, ultraviolet spectroscopy and mass spectrometry. The two new compounds successfully isolated from the crude extracts of stem bark of the Artocarpus kemando, are artomandin (161) and kemandonin (162). Besides this, two triterpenoids were identified to be 24-methylenecycloartany acetate (160) and β-Sitosterol (1), while four flavonoids were authenticated as cycloartobiloxanthone (8), artoindonesianin C (51), artonol B (73) and artochamin A
On the other hand, studies on the stem bark crude extracts of *Artocarpus odoratissimus* yielded a triterpenoid, traxateryl acetate (163), and a new flavonoid, artosimmin (164).

The biological studies on the crude extracts and pure compounds of *Artocarpus* species indicated both to have significant biological activity especially in the cytotoxic assay. Cytotoxic assay was performed using human promyelocytic leukemia, HL-60 and human breast adenocarcinoma, MCF-7 cell lines. All the stem bark extracts of *Artocarpus* species were found to show significant growth inhibition activities towards HL-60 cell line especially the chloroform, ethyl acetate and ethanol extracts of *Artocarpus odoratissimus*, which gave extremely low IC<sub>50</sub> values of 3.2, 3.7 and 2.9 µg/ ml, respectively. Moreover, the MCF-7 cell line was found to be sensitive against the chloroform, ethyl acetate and ethanol extracts of *Artocarpus odoratissimus* with IC<sub>50</sub> values of less than 30.0 µg/ ml. Artomandin (161) strongly inhibits the HL-60 and MCF-7 cell lines with IC<sub>50</sub> values of 2.4 and 3.1 µg/ ml, respectively. Both cell lines also showed similar degree of susceptibility toward artosimmin (164) with IC<sub>50</sub> values of 1.1 and 3.4 µg/ ml, respectively. However, the HL-60 cell line was found to be moderately susceptible toward cycloartobiloxanthone (8) and kemandonin (162) with IC<sub>50</sub> values of 5.7 and 6.9 µg/ ml, respectively. Meanwhile, the MCF-7 cell line was also observed to be far less sensitive to cycloartobiloxanthone (8) and kemandonin (162), which exhibited medium cytotoxicity with the IC<sub>50</sub> value of 13.4 and 13.1 µg/ ml, respectively.
Antioxidant assays were also carried out on the crude extracts and pure compounds of the stem bark of *Artocarpus kemando* and *Artocarpus odoratissimus* using free radical DPPH scavenging test. The crude chloroform, ethanol and methanol extracts of *Artocarpus kemando* gave the strongest antioxidant capacity in the free radical DPPH tests with extremely low IC$_{50}$ values of 27.1, 19.2 as well as 23.3 µg/ ml. artonandin (161) and artosimmin (164), showed the highest potential of scavenging effect towards the DPPH radical test with IC$_{50}$ values of 38.0 and 32.1 µg/ ml, respectively. Meanwhile, cycloartobiloxanthone (8) revealed a lower DPPH scavenging effect with an IC$_{50}$ value of 87.2 µg/ ml. Both artoindonesianin C (51) and artonol B (73) gave weak scavenging activity with IC$_{50}$ values of more than 90.0 µg/ ml.
Abstrak tesis yang dikemukakan kepada Senat Universiti Putra Malaysia sebagai memenuhi keperluan untuk ijazah Master Sains

SEBATIAN-SEBATIAN KIMIA DAN AKTIVITI-ACTIVITI BIOLOGI DARIPADA _ARTOCARPUS KEMANDO_ MIQ. AND _ARTOCARPUS ODORATISSIMUS_ BLANCO

Oleh

TEO SIOW HWA

Mac 2010

Pengerusi : Gwendoline Ee Cheng Lian, PhD

Fakulti : Sains

Kajian secara kimia ke atas pokok-pokok _Artocarpus kemando_ dan _Artocarpus odoratissimus_ telah menghasilkan sepuluh sebatian-sebatian semulajadi dengan tiga sebatian-sebatian semulajadi yang baru. Semua sebatian tulen ini telah dipisahkan dengan menggunakan kaedah kromatografi dan struktur masins-masing telah dikenalpasti berdasarkan bukti-bukti spectroskopi termasuk satu-dimensi resonans magnetic nuclear spektroskopi, dua-dimensi resonans magnetic nuclear spektroskopi, infra-merah spektroskopi, ultra-ungu spektroskopi dan jisim spektrosmetri. Dua sebatian semulajadi baru iaitu artomandin (161) dan kemandonin (162) telah berjaya ditemui daripada ekstrak-ekstrak mentah kulit pokok _Artocarpus kemando_.
Sementara itu, dua sebatian triterpenoid telah masing-masing dikenalpasti sebagai 24-methylenecycloartanyl acetate (160) dan β-Sitosterol (1) manakala empat
flavonoid yang ditemui telah dikenali sebagai cycloartobiloxanthone (8), artoindonesianin C (51), artonol B (73) dan artochamin A (95) masing-masing. Selain daripada itu, kajian juga talah dijalankan ke atas ekstrat-ekstrat mentah kulit pokok *Artocarpus odoratissimus* dan ini menghasilkan satu triterpenoid, traxateryl acetate (163) dan satu sebatian flavonoid yang baru, artosimmin (164).

Kajian secara biologi ke atas ekstrak-ekstrak mentah dan sebatian-sebatian semulajadi daripada spesis *Artocarpus* menunjukkan kedua-duanya adalah aktif terutamanya dalam kajian sitotosik. Kajian sitotosik telah dijalankan dengan menggunakan sel-sel human promyelocytic leukemia, HL-60 dan human breast adenocarcinoma, MCF-7. Kesemuanya ekstrak mentah yang diperolehi daripada spesis *Artocarpus* telah menunjuk aktiviti yang ketara terutamanya ekstrak-ekstrak kloroform, etil asetat, dan etanol daripada pokok *Artocarpus odoratissimus*, dengan nilai IC₅₀ yang terlampau rendah iaitu 3.2, 3.7 dan 2.9 µg/ ml. Di samping itu, sel MCF-7 juga didapati sensitive kepada ekstrak-ekstrak kloroform, etil asetat, dan etanol daripada pokok *Artocarpus odoratissimus* iaitu dengan nilai IC₅₀ kurang daripada 30.0 µg/ ml masing-masing. Sebatian artomandin (161) menunjukkan aktiviti penghalangan yang kuat terhadap sel-sel HL-60 dan MCF-7 dengan nilai-nilai IC₅₀ iaitu 2.4 dan 3.1 µg/ ml. Kedua-duanya sel juga menunjukkan aktiviti penghalangan yang serupa dengan sebatian artosimmin (164) dengan nilai IC₅₀ iaitu 1.1 dan 3.4 µg/ ml. Manakala, sel HL-60 menunjukkan aktiviti penghalangan yang serdehana daripada sebatian-sebatian cycloartobiloxanthone (8) dan kemandonin.
(162) dengan nilai IC$_{50}$ 5.7 dan 6.9 µg/ml. Selain itu, sel MCF-7 juga didapati kurang sensitif kepada sebatian-sebatian cycloartobiloxanthone (8) dan kemandonin (162) iaitu dengan nilai-nilai IC$_{50}$, 13.4 and 13.1 µg/ml masing-masing.

Ujian antioksidan telah dijalankan ke atas ekstrak-ekstrak mentah dan sebatian-sebatian semulajadi daripada Artocarpus kemando dan Artocarpus odoratissimus dengan menggunakan kaedah peresapan cakera bebas DPPH. Ekstrak-ekstrak kloroform, etanol dan metanol daripada pokok Artocarpus kemando telah menunjukkan kapasiti antioksidan yang paling tinggi dalam ujian cakera bebas DPPH dengan nilai IC$_{50}$ yang terlampau rendah, iaitu 27.1, 19.2 dan 23.3 µg/ml. Sebatian-sebatian artomandin (161) and artosimmin (164) menunjukkan kesan potensi peresapan yang paling tinggi terhadap ujian cakera DPPH, iaitu dengan nilai IC$_{50}$, 38.0 and 32.1 µg/ml masing-masing. Manakala, sebatian cycloartobiloxanthone (8) menunjukkan kesan peresapan cakera DPPH yang paling rendah dengan nilai IC$_{50}$ iaitu 87.2 µg/ml. Kedua-duanya sebatian, artoindonesianin C (51) dan artonol B (73) menunjukkan aktiviti peresapan yang rendah dengan nilai IC$_{50}$ lebih daripada 90.0 µg/ml.
ACKNOWLEDGEMENT

I wish to thank my supervisor, Prof. Dr. Gwendoline Ee Cheng Lian for her valuable advice, continual support, constant encouragement, patience and mentoring over the course of my Master's degree program. To the other members of my supervisory committee, Prof. Dr. Mawardi Rahmani and Dr. Lim Chan Kiang, i would also like to convey my utmost gratititude for their suggestions and comments throughout my studies. I am also grateful to Dr. Lim Yang Mooi who has been very patient in guiding me through the biological aspects of this work in her laboratory, Department of Science, Universiti Tunku Abdul Rahman. My past and present lab colleagues (Yen Ping, Wei Chung, Siau Hui and Soek Sin) are acknowledged for their friendship and numerous helpful discussions over the years. Nevertheless, I am also deeply grateful for the help and support given to me by other colleagues from other laboratories (Sang Long, Yee Ching, Sook Wah, Chaw Jiang, Ayu and Ijoy). Many thanks also go to Siew Huah, Lim and other members from University Malaya who motivated me to accomplish my studies. The technical assistants of Chemistry Department, En. Johadi (NMR), Kak Shaarina (NMR), En. Zainal (MS), En. Nordin (UV), Kak Rusnani (IR) and En. Zainuddin are gratefully acknowledged. I also like to thank En. Azizol and Kak Lina for NMR analysis and cytotoxic assay, respectively. Lastly, my greatest debt is to both my parents who have given me tremendous support in terms of encouragement and financial help.
I certify that an Examination Committee met on 24th March 2010 to conduct the final examination of Teo Siow Hwa on his Master of Science thesis entitled “The Phytochemistry and Biological Activities of *Artocarpus kemando* Miq. (Pudau) and *Artocarpus odoratissimus* Blanco (Terap) (Moraceae)” in accordance with Universiti Putra Malaysia (Higher Degree) Act 1980 and Universiti Putra Malaysia (Higher Degree) Regulations 1981. The committee recommends that the candidate be awarded the relevant degree. Members of the Examination Committee are as follows:

**INTAN SAFINAR ISMAIL, PhD**  
Faculty of Science  
Universiti Putra Malaysia  
(Chairman)

**MOHD. ASPOLLAH HJ. MD. SUKARI, PhD**  
Faculty of Science  
Universiti Putra Malaysia  
(Internal Examiner)

**TAUFIQ YAP YUN HIN, PhD**  
Faculty of Science  
Universiti Putra Malaysia  
(Internal Examiner)

**CHUA CHENG HOCK, PhD**  
Faculty of Science  
Universiti Malaya  
(External Examiner)

---

**BUJANG KIM HUAT, PhD**  
Professor/ Deputy Dean  
School of Graduate Studies  
Universiti Putra Malaysia

Date:
This thesis submitted to the Senate of Universiti Putra Malaysia and has been accepted as fulfilment of the requirement for the degree of Master of Science. The members of the Supervisory Committee were as follows:

GWENDOLINE EE CHENG LIAN, PhD  
Professor  
Faculty of Science  
Universiti Putra Malaysia  
(Chairman)

MAWARDI RAHMANI, PhD  
Professor  
Faculty of Science  
Universiti Putra Malaysia  
(Member)

LIM CHAN KIANG, PhD  
Dr.  
Faculty of Science, Engineering & Technology  
Universiti Tunku Abdul Rahman  
(Member)

HASANAH MOHD GHAZALI, PhD  
Professor and Dean  
School of Graduate Studies  
Universiti Putra Malaysia

Date: 10th June 2010
DECLARATION

I declare that the thesis is my original work except for quotations and citations which have been duly acknowledged. I also declare that it has not been previously, and is not concurrently, submitted for any other degree at Universiti Putra Malaysia or at any other institution.

4.54 $^{13}$C NMR spectrum of artonol B (73) [100 MHz, CDCl$_3$] 183
4.55 DEPT spectrum of artonol B (73) [100 MHz, CDCl$_3$] 184
4.56 $^1$H-$^1$H COSY spectrum of artonol B (73) 185
4.57 HMQC spectrum of artonol B (73) 186
4.58 HMBC spectrum of artonol B (73) 187
4.59 Fragmentation pattern of β-sitosterol (1) 189
4.60 IR spectrum of β-Sitosterol (1) 192
4.61 EIMS spectrum of β-Sitosterol (1) 193
4.62 $^1$H NMR spectrum of β-Sitosterol (1) [400 MHz, CDCl$_3$] 194
4.63 $^{13}$C NMR spectrum of β-Sitosterol (1) [100 MHz, CDCl$_3$] 195
4.64 Fragmentation pattern of artochamin A (95) 198
4.65 UV spectrum of artochamin A (95) 201
4.66 IR spectrum of artochamin A (95) 202
4.67 EIMS spectrum of artochamin A (95) 203
4.68 $^1$H NMR spectrum of artochamin A (95) [400 MHz, CDCl$_3$] 204
4.69 $^{13}$C NMR spectrum of artochamin A (95) [100 MHz, CD$_3$OD$_3$] 205
4.70 DEPT spectrum of artochamin A (95) [100 MHz, CD$_3$OD$_3$] 206
4.71 $^1$H-$^1$H COSY spectrum of artochamin A (95) 207
4.72 HMQC spectrum of artochamin A (95) 208
4.73 HMBC spectrum of artochamin A (95) 209
4.74 Fragmentation pattern of traxateryl acetate (163) 212
4.75 IR spectrum of traxateryl acetate (163) 215
4.76 EIMS spectrum of traxateryl acetate (163) 216
4.77 $^1$H NMR spectrum of of traxateryl acetate (163) 217
4.78 $^1$H NMR spectrum of of traxateryl acetate (163) (expended) 218
4.79 $^{13}$C NMR spectrum of traxateryl acetate (163) 219
4.80 $^{13}$C NMR spectrum of traxateryl acetate (163) (expended) 220
4.81 $^{13}$C NMR spectrum of traxateryl acetate (163) (expended) 221
4.82 DEPT spectrum of traxateryl acetate (163) 222
4.83 Fragmentation pattern of artosimmin (164) 226
4.84 UV spectrum of artosimmin (164) 230
4.85 IR spectrum of artosimmin (164) 231
4.86 EIMS spectrum of artosimmin (164) 232
