**RUNGE-KUTTA-NYSTROM METHODS FOR
SOLVING OSCILLATORY PROBLEMS**

By

NORAZAK BIN SENU

February 2010

Chairman : Professor Dato' Mohamed bin Suleiman, PhD

Faculty : Science

New Runge-Kutta-Nyström (RKN) methods are derived for solving system of second-order Ordinary Differential Equations (ODEs) in which the solutions are in the oscillatory form. The dispersion and dissipation relations are imposed to get methods with the highest possible order of dispersion and dissipation. The derivation of Embedded Explicit RKN (ERKN) methods for variable step size codes are also given. The strategies in choosing the free parameters are also discussed. We analyze the numerical behavior of the RKN and ERKN methods both theoretically and experimentally and comparisons are made over the existing methods.

In the second part of this thesis, a Block Embedded Explicit RKN (BERKN) method are developed. The implementation of BERKN method is discussed. The numerical results are compared with non block method. We find that the new code on Block Embedded Explicit RKN (BERKN) method is more efficient for solving system of second-order ODEs directly.

Next, we discussed the derivation of Diagonally Implicit RKN (DIRKN) methods for solving stiff second order ODEs in which the solutions are oscillating functions. The dispersion and

dissipation relations are developed and again are imposed in the derivation of the methods. For solving oscillatory problems with high frequency, method with P-stability property is discussed. We also derive the Embedded Diagonally Implicit RKN (EDIRKN) methods for variable step size codes. To see the preciseness and effectiveness of the methods, the constant and variable step size codes are developed and numerical results are compared with current methods given in the literature.

Finally, the Parallel Embedded Explicit RKN (PERKN) method is developed. The parallel implementation of PERKN on the parallel machine is discussed. The performance of the PERKN algorithm for solving large system of ODEs are presented. We observe that the PERKN gives the better performance when solving large system of ODEs.

In conclusion, the new codes developed in this thesis are suitable for solving system of second-order ODEs in which the solutions are in the oscillatory form.

Abstrak tesis yang dikemukakan kepada Senat Universiti Putra Malaysia sebagai memenuhi keperluan untuk ijazah Doktor Falsafah

**KAEDAH RUNGE-KUTTA-NYSTROM BAGI
MENYELESAIKAN MASALAH BERAYUNAN**

Oleh

NORAZAK BIN SENU

Februari 2010

Pengerusi : Professor Dato' Mohamed bin Suleiman, PhD

Fakulti : Sains

Kaedah baharu Runge-Kutta-Nyström (RKN) diterbitkan bagi menyelesaikan Persamaan Pembezaan Biasa (PPB) peringkat dua yang mana penyelesaiannya adalah dalam bentuk berayunan. Hubungan serakan dan lesapan dikenakan bagi mendapatkan kaedah dengan peringkat serakan dan lesapan setinggi yang mungkin. Penerbitan kaedah Benaman Tak Tersirat RKN (BTRKN) untuk kod panjang langkah berubah turut diberikan. Strategi pemilihan parameter bebas juga dibincangkan. Kami menganalisa kelakuan berangka bagi kaedah RKN dan BTRKN secara teori dan eksperimen serta perbandingan dibuat terhadap kaedah sedia ada.

Di dalam bahagian kedua tesis, kaedah Blok Benaman Tak Tersirat RKN (BBRKN) dibincangkan. Implimentasi ke atas kaedah BBRKN turut dibincangkan. Keputusan berangka dibandingkan dengan kaedah bukan blok. Kami perolehi bahawa kod baharu Blok Benaman Tak Tersirat RKN (BBRKN) adalah lebih efisien bagi menyelesaikan sistem PPB peringkat dua.

Seterusnya, kami membincangkan penerbitan kaedah Pepenjuru Tersirat (PTRKN) bagi menyelesaikan PPB kaku peringkat dua yang penyelesaiannya berbentuk berkala. Hubungan serakan dan lesapan dibangunkan dan sekali lagi diaplikasikan dalam penerbitan kaedah. Untuk menyelesaikan masalah berkala dengan frekuensi tinggi, kaedah dengan sifat P-kestabilan dibincangkan. Kami juga menerbitkan kaedah Benaman Pepenjuru Tersirat RKN (BPTRKN) bagi kod panjang langkah berubah. Untuk melihat kejituan dan keefisienan kaedah, kod panjang langkah tetap dan berubah dibangunkan serta keputusan berangka dibandingkan terhadap kaedah sedia ada.

Akhir sekali, kaedah Selari Benaman Tak Tersirat RKN (SBTRKN) dibangunkan. Implimentasi SBTRKN ke atas mesin selari dibincangkan. Prestasi algoritma SBTRKN bagi menyelesaikan sistem PPB berdimensi besar diberikan. Kami perolehi SBTRKN memberikan prestasi yang baik bila dilaksanakan terhadap sistem PPB berdimensi besar.

Kesimpulannya, kod baharu yang dibangunkan di dalam tesis ini sesuai untuk sistem PPB peringkat dua yang mana penyelesaian adalah dalam bentuk berayunan.

ACKNOWLEDGEMENTS

**In the Name of Allah the Most Compassionate,
the Most Merciful First and foremost**

First all, praise is for *Allah Subhanahu Wa Taala* for giving me the strength, guidance and patience to complete this thesis. May blessing and peace be upon Prophet Muhammad *Sallallahu Alaihi Wasallam*, who was sent for mercy to the world.

I wish to express my sincere and deepest gratitude to the chairman of the supervisory committee, YBhg. Professor Dato' Dr. Mohamed bin Suleiman for his invaluable advice, guidance, assistance and most of all, for his constructive criticisms. This work would not have been completed without his help that I received in various aspects of the research.

I am also grateful to the member of the supervisory committee, Associate Professor Dr. Fudziah bt Ismail and Professor Dr. Mohamed bin Othman. I also wish to express my thanks to all of my friends during my study in Universiti Putra Malaysia. I would like to thank all staffs of the Department of Mathematics. Their continuous help, encouragement and support are highly appreciated. I thank my employer, Universiti Putra Malaysia for providing me with the UPM scholarship which funded this research during most of my studies and also who granted me study leave.

Finally, I cannot put into words how much I appreciate the continuous support, understanding and patience of my wife, Norfifah, and my children, Nor Fatin Aqilah, Muhammad Farhan Aqil and Muhammad Fath Hadif and special thanks to my mother Hjh. Jamenah bt. Sirat and my father Hj. Senu bin Sabikan for their continuous encouragement. Thank you.

I certify that a Thesis Examination Committee has met on 22 February 2010 to conduct the final examination of Norazak bin Senu on his thesis entitled “Runge-Kutta-Nyström Methods for Solving Oscillatory Problems” in accordance with Universities and University Colleges Act 1971 and the Constitution of the Universiti Putra Malaysia [P.U.(A) 106] 15 March 1998. The Committee recommends that the student be awarded the Doctor of Philosophy.

Members of the Thesis Examination Committee were as follows:

Norihan Md. Arifin, PhD

Associate Professor
Faculty of Science
Universiti Putra Malaysia
(Chairman)

Malik Hj Abu Hassan, PhD

Professor
Faculty of Science
Universiti Putra Malaysia
(Internal Examiner)

Leong Wah Jun, PhD

Universiti Putra Malaysia

Date: 15 April 2010

This thesis was submitted to the Senate of Universiti Putra Malaysia and has been accepted as fulfilment of the requirement for the degree of Doctor of Philosophy. The members of the Supervisory Committee were as follows:

Dato' Mohamed Suleiman, PhD

Professor
Faculty of Science
Universiti Putra Malaysia
(Chairman)

Fudziah Ismail, PhD

Associate Professor
Faculty of Science
Universiti Putra Malaysia
(Member)

Mohamed Othman, PhD

Professor
Faculty of Computer Science and Information Technology
Universiti Putra Malaysia
(Member)

HASANAH MOHD GHAZALI, PhD

Professor and Dean
School of Graduate Studies
Universiti Putra Malaysia

Date: 13 May 2010

DECLARATION

I hereby declare that the thesis is based on my original work except for quotations and citations which have been duly acknowledged. I also declare that it has not been previously or concurrently submitted for any other degree at UPM or other institutions.

5.3	The DIRKN3(4,6)(a) method	200
5.4	The DIRKN3(4,6)(b) method	201
5.5	Summary of the characteristic of the three-stage fourth-order DIRKN methods	202
5.6	Comparing our results with the methods in the literature for Problem 5.1	207
5.7	Comparing our results with the methods in the literature for Problem 5.2	208
5.8	Comparing our results with the methods in the literature for Problem 5.3	209
5.9	Comparing our results with the methods in the literature for Problem 5.4	210
5.10	The DIRKN4(4,4)a method	217
5.11	The DIRKN4(4,4)b method	218
5.12	The DIRKN4(4,8) method	223
5.13	The DIRKN4(4,4)P method	227

5.14	Summary of the characteristic of the four-stage fourth-order DIRKN methods	228
5.15	Comparison numerical results between DIRKN4(4,4)(a), DIRKN4(4,4)(b), DIRKN4(4,6), DIRKN4(4,8) and DIRKN4(4,4)Raed methods for Problem 5.1	229
5.16	Comparison numerical results between DIRKN4(4,4)(a), DIRKN4(4,4)(b), DIRKN4(4,6), DIRKN4(4,8) and DIRKN4(4,4)Raed methods for Problem 5.2	230
5.17	Comparison numerical results between DIRKN4(4,4)(a), DIRKN4(4,4)(b), DIRKN4(4,6), DIRKN4(4,8) and DIRKN4(4,4)Raed methods for Problem 5.3	231
5.18	Comparison numerical results between DIRKN4(4,4)(a), DIRKN4(4,4)(b), DIRKN4(4,6), DIRKN4(4,8) and DIRKN4(4,4)Raed methods for Problem 5.4	232
5.19	Comparison results for DIRKN4(4,4)P with the DIRKN3(4,4)P-Fine, DIRKN4(4,6)P-Franco and DIRKN4(4,8)P-Franco methods for Problem 5.5	236
5.20	Comparison results for DIRKN4(4,4)P with the DIRKN3(4,4)P-Fine, DIRKN4(4,6)P-Franco and DIRKN4(4,8)P-Franco methods for Problem 5.6	236
6.1	The DIRKN34(3)6 method	243
6.2	The DIRKN44(3)8 method	245
6.3	Comparison results between DIRKN34(3)6, DIRKN44(3)8, DIRKN44(3)Raed and DIRKN34(3)Imoni for Problem 5.1	247
6.4	Comparison results between DIRKN34(3)6, DIRKN44(3)8, DIRKN44(3)Raed and DIRKN34(3)Imoni for Problem 5.2	248
6.5	Comparison results between DIRKN34(3)6, DIRKN44(3)8, DIRKN44(3)Raed and DIRKN34(3)Imoni for Problem 5.3	249
6.6	Comparison results between DIRKN34(3)6, DIRKN44(3)8, DIRKN44(3)Raed and DIRKN34(3)Imoni for Problem 5.4	250
6.7	The DIRKN4(3)P method	257
6.8	Comparison numerical results between EDIRKN34(3)P and DIRK4(3)B for Problem 5.5	258
6.9	Comparison numerical results between EDIRKN34(3)P and DIRK4(3)B for Problem 5.6	259

6.10	Comparison numerical results between EDIRKN4(3)P and DIRK4(3)B for Problem 5.7	259
6.11	Comparison numerical results between EDIRKN4(3)P and DIRK4(3)B for Problem 5.8	260
7.1	Hardware Configuration of Sunfire 1280	267
7.2	Runge-Kutta matrix suggested by Burrage (1990)	272
7.3	A new Runge-Kutta matrix adapted for PERKN method	272
7.4	The Parallel Embedded Explicit RKN (PERKN5(4)) method	274
7.5	Numerical results of sequential and parallel implementation of PERKN5(4) for Problem 7.1	280
7.6	Numerical results of sequential and parallel implementation of PERKN5(4) for Problem 7.2	282

LIST OF FIGURES

Figure	Page
2.1 Stability region for RKN3(3,6,3)M method with $m = 3$; $p = 3$; $q = 6$ and $r = 3$	35
2.2 Stability region for RKN3(3,6,3)S method with $m = 3$; $p = 3$; $q = 6$ and $r = 3$	36
2.3 Stability region for RKN3(3,6,5) method with $m = 3$; $p = 3$; $q = 6$ and $r = 5$	38
2.4 Histogram of accuracy for third-order RKN methods for Problem 2.1 with $h = 0.025$	52
2.5 Histogram of accuracy for third-order RKN methods for Problem 2.2 with $h = 0.025$	52
2.6 Histogram of accuracy for third-order RKN methods for Problem 2.3 with $h = 0.025$	53
2.7 Histogram of accuracy for third-order RKN methods for Problem 2.4 with $h = 0.025$	53
2.8 Histogram of accuracy for third-order RKN methods for Problem 2.5 with $h = 0.025$	54
2.9 Histogram of accuracy for third-order RKN methods for Problem 2.6 with $h = 0.025$	54
2.10 Stability region for RKN4(4,8,5)S method with $m = 4$; $p = 4$; and $q = 8$	60
2.11 Stability region for RKN4(4,8,5)S method for the range $-2 \leq \text{Re}(H) \leq 0$	60
2.12 Stability region for RKN4(4,8,7) method	62
2.13 Histogram of accuracy for fourth-order RKN methods for Problem 2.1 with $h = 0.025$	72
2.14 Histogram of accuracy for fourth-order RKN methods for Problem 2.2 with $h = 0.025$	72
2.15 Histogram of accuracy for fourth-order RKN methods for Problem 2.3 with $h = 0.025$	73
2.16 Histogram of accuracy for fourth-order RKN methods for Problem 2.4 with $h = 0.025$	73
2.17 Histogram of accuracy for fourth-order RKN methods for Problem 2.5 with $h = 0.05$	74

2.18	Histogram of accuracy for fourth-order RKN methods for Problem 2.6 with $h = 0.05$	74
2.19	Stability region for RKN4(5,8,5)S method	78
2.20	Stability region for RKN4(5,8,5)S method for the range $-2.5 \leq \text{Re}(H) \leq 0$	79
2.21	Stability region for RKN4(5,8,7) method	80
2.22	Stability region for RKN4(5,8,7) method for the range $-2.5 \leq \text{Re}(H) \leq 0$	82
2.23	Histogram of accuracy for fifth-order RKN methods for Problem 2.1 with $h = 0.025$	91
2.24	Histogram of accuracy for fifth-order RKN methods for Problem 2.2 with $h = 0.025$	91
2.25	Histogram of accuracy for fifth-order RKN methods for Problem 2.3 with $h = 0.05$	92
2.26	Histogram of accuracy for fifth-order RKN methods for Problem 2.4 with $h = 0.05$	92
2.27	Histogram of accuracy for fifth-order RKN methods for Problem 2.5 with $h = 0.1$	93
2.28	Histogram of accuracy for fifth-order RKN methods for Problem 2.6 with $h = 0.05$	93
3.1	Efficiency curve for 3(2) pair of RKN methods for Problem 2.1	112
3.2	Efficiency curve for 3(2) pair of RKN methods for Problem 2.2	112
3.3	Efficiency curve for 3(2) pair of RKN methods for Problem 2.3	113
3.4	Efficiency curve for 3(2) pair of RKN methods for Problem 2.6	113
3.5	Efficiency curve for 4(3) pair of RKN methods for Problem 2.1	128
3.6	Efficiency curve for 4(3) pair of RKN methods for Problem 2.2	128
3.7	Efficiency curve for 4(3) pair of RKN methods for Problem 2.5	129
3.8	Efficiency curve for 4(3) pair of RKN methods for Problem 2.7	129
3.9	Efficiency curve for 5(4) pair of RKN methods for Problem 2.1	144
3.10	Efficiency curve for 5(4) pair of RKN methods for Problem 2.2	144
3.11	Efficiency curve for 5(4) pair of RKN methods for Problem 2.3	145

3.12	Efficiency curve for 5(4) pair of RKN methods for Problem 2.6	145
4.1	Stability region for Block Explicit RKN method of Type A	161
4.2	Stability region for Block Explicit RKN method of Type B	172
4.3	Efficiency curve for block methods for Problem 2.1	181
4.4	Efficiency curve for block methods for Problem 2.3	181
4.5	Efficiency curve for block methods for Problem 2.4	182
4.6	Efficiency curve for block methods for Problem 2.7	182
4.7	Efficiency curve for block methods for Problem 2.8	183
5.1	Stability region for DIRKN3(4,6)(a) method	201
5.2	Stability region for DIRKN3(4,6)(b) method	202
5.3	Histogram of accuracy for three-stage forth-order DIRKN method for Problem 5.1 with $h = 0.01$	211
5.4	Histogram of accuracy for three-stage forth-order DIRKN method for Problem 5.2 method with $h = 0.25$	211
5.5	Histogram of accuracy for three-stage forth-order DIRKN method for Problem 5.3 method with $h = 0.0625$	212
5.6	Histogram of accuracy for three-stage forth-order DIRKN method for Problem 5.4 method with $h = 0.01$	212
5.7	Stability region for DIRKN4(4,8) method	224
5.8	Histogram of accuracy for four-stage forth-order DIRKN method for Problem 5.1 with $h = 0.01$	233
5.9	Histogram of accuracy for four-stage forth-order DIRKN method for Problem 5.2 with $h = 0.0625$	233
5.10	Histogram of accuracy for four-stage forth-order DIRKN method for Problem 5.3 with $h = 0.25$	234
5.11	Histogram of accuracy for four-stage forth-order DIRKN method for Problem 5.4 with $h = 0.01$	234
5.12	Histogram of accuracy for P-stable four-stage forth-order DIRKN method for Problem 5.5 with $h = 0.0025$	237
5.13	Histogram of accuracy for P-stable four-stage forth-order DIRKN method for Problem 5.6 with $h = 0.0625$	237

6.1	Efficiency curve for 4(3) pair DIRKN methods for Problem 5.1	251
6.2	Efficiency curve for 4(3) pair DIRKN methods for Problem 5.2	251
6.3	Efficiency curve for 4(3) pair DIRKN methods for Problem 5.3	252
6.4	Efficiency curve for 4(3) pair DIRKN methods for Problem 5.4	252
6.5	Stability region for embedded formula of DIRKN4(3)P	256
6.6	Efficiency curve for DIRKN4(3)P method for Problem 5.5	261
6.7	Efficiency curve for DIRKN4(3)P method for Problem 5.6	261
6.8	Efficiency curve for DIRKN4(3)P method for Problem 5.7	262
6.9	Efficiency curve for DIRKN4(3)P method for Problem 5.8	262
7.1	MPI program structure	269
7.2	Speedup for PERKN5(4) method on Parallel Machine when solving Problem 7.1	281
7.3	Efficiency for PERKN5(4) method on Parallel Machine when solving Problem 7.1	281
7.4	Speedup for PERKN5(4) method on Parallel Machine when solving Problem 7.2	283
7.5	Efficiency for PERKN5(4) method on Parallel Machine when solving Problem 7.2	283
