COMMUNICATION IN CHORDAL RING NETWORKS

By

ATHEER ABBAS MATROUD

April 2006

Chairman : Associate Professor Mohamed Othman, PhD

Faculty : Computer Science and Information Technology

The chordal ring networks have been the objects of a great deal of attention in recent years, and several parallel computers have configurations based on the chordal ring topology. Common ways to improve the network performance are to increase its connectivity and decrease its diameter. Therefore, this thesis addresses the fundamental problems of communication in chordal ring of high degree and studies the degree diameter problem in such topology. In particular, we concentrate on Compact Routing, a family of routing methods that minimizes the space and time complexity. An efficient boolean routing scheme that has $O(1)$ time complexity and $O(\log n)$ space complexity is introduced. Based on the existing results in [61] done by Narayanan and Opatrny, we propose a new algorithm for some families of chordal ring of de-

degree six graphs. New properties for this families of graphs have been introduced such as finding the maximum number of nodes for a given diameter; it has been found that the chordal ring that has the maximum number of nodes for diameter k is $G(4k^2 + 2k + 1; 2k + 1; 2k^2)$. Moreover, a broadcasting scheme for this family of chordal rings of degree six has been constructed. It has been found that this scheme can broadcast the message to all nodes in the graph by time at most $k + 3$ where k is the diameter. The uniqueness property of the shortest path type between any two nodes in chordal rings of degree four and six has been introduced, this property helps us in deriving our results.

Abstrak tesis yang diserahkan kepada Senat Universiti Putra Malaysia sebagai memenuhi keperluan untuk ijazah Doktor Falsafah

KOMUNIKASI DALAM RANGKAIAN CINCIN CHORDAL

Oleh

ATHEER ABBAS MATROUD

April 2006

Pengerusi : Profesor Madya Mohamed Othman, PhD

Fakulti : Sains Komputer dan Teknologi Maklumat

Rangkaian cincin *chordal* telah memperolehi perhatian yang meluas sejak kebelakangan ini dan beberapa komputer selari telah dikongurasikan dengan menggunakan topologi cincin *chordal*. Kebiasaannya untuk memperbaiki prestasi rangkaian adalah dengan memperbanyakkan sambungan dan mengurangkan garispusatnya. Oleh yang demikian, thesis ini menerangkan masalah asas bagi komunikasi cincin *chordal* darjah tertinggi dan kajian tentang permasalahan penetapan darjah garispusat bagi topologi tersebut.

Secara terperinci, kami menfokuskan kepada *Compact Routing*, iaitu satu kaedah penghalaan yang meminimumkan kompleksiti ruang dan masa. Algoritma pengha-

laan *boolean* efektif yang mempunyai kompleksiti masa $O(1)$ dan ruang $O(\log n)$ diperkenalkan.

Berdasarkan keputusan daripada kajian yang dilakukan oleh Narayanan dan Opatrny [61], kami mencadangkan satu algoritma baru bagi beberapa keluarga cincin *chordal* darjah enam.

ceri-ceri terbaru keluarga ini diperkenalkan seperti pencarian bilangan nod maksimum bagi setiap garispusat yang diberi. Dalam mencari cincin *chordal* mempunyai bilangan nod maksimum bagi garispusat k ialah $G(4k^2 + 2k + 1; 2k + 1; 2k^2)$. Tambahan pula, kami telah membangunkan algoritma penyebaran bagi jenis cincin *chordal* darjah enam. Ianya didapati bahawa algoritma ini boleh menyebarkan mesej kepada semua nod dalam graf dengan masatidak melebihi $k + 3$ di mana k adalah garispusat. Keunikkan ciri jenis laluan terpendek antara mana-mana dua nod dalam cincin *chordal* darjah empat dan enam telah diperkenalkan. Justeru itu, ciri tersebut membantu kami dalam perolehi keputusan.

ACKNOWLEDGMENTS

First of all, I would like to praise ALLAH (S.W.T) for his uncounted favours which I cannot reckon them.

I am very thankful to my supervisor Associate Professor Dr. Mohamed Othman. I also appreciate all the cooperation from the committee members Associate Professor Mohd Hasan Selamat and Dr. Rozita Johari. Thanks to every person who have supported me to produce my thesis. I am thankful to Associate Professor Dr. Abdul Azim Abd Ghani and Associate Professor Dr. Ramlan Mahmod for their advices and encouragment. I am very grateful to the Faculty of Computer Science and Information Technology and the staff of Postgraduate office, Library and University Putra Malaysia, for providing a studying and research environment.

Thanks to Dr. Thomas Bier for his great help. Without him my thesis would not be the way it is. I am very grateful to all my friends who help and support me during my study (specially Nasrulddin who checked the chapter of Introduction, Salah and Payam).

I would like to thank my big family for their moral and financial support. Last but not least, thanks to my wife who always motivates me and encourages me in all my endeavors.

ATHEER ABBAS MATROUD

I certify that an Examination Committee has met on 10th April 2006 to conduct the final examination of Atheer Abbas Matroud on his Doctor of Philosophy thesis entitled "Communication in Chordal Ring Networks" in accordance with Universiti Pertanian Malaysia (Higher Degree) Act 1980 and Universiti Pertanian Malaysia (Higher Degree) Regulations 1981. The Committee recommends that the candidate be awarded the relevant degree. Members of Examination Committee are as follows:

RAMLAN MAHMUD, PhD
Associate Professor
Faculty of Computer Science and Information Technology
University Putra Malaysia
(Chairman)

ABDUL AZIM ABD GHANI, PhD
Associate Professor
Faculty of Computer Science and Information Technology
University Putra Malaysia
(Internal Examiner)

SHAMALA SUBRAMANIAM
Lecturer
Faculty of Computer Science and Information Technology
University Putra Malaysia
(Internal Examiner)

COMELLAS FRANCESCO, PhD
Associate Professor
Matemática Aplicada IV
Universitat Politècnica de Catalunya
(External Examiner)

HASANAH MOHD GHAZALI, PhD
Professor, Deputy Dean
School of Graduate Studies
Universiti Putra Malaysia

Date:

DECLARATION

I hereby declare that the thesis is based on my original work except for quotations and citations which have been duly acknowledged. I also declare that it has not been previously or concurrently submitted for any other degree at UPM or other institutions.
