**SHARP-EDGES STEGANOGRAPHY IN ARABIC CHARACTERS FOR
INFORMATION HIDING**

By

NUUR ALIFAH BINTI ROSLAN

**This thesis Submitted to the School of Graduate Studies, Universiti Putra Malaysia,
in Fulfillment of the Requirement for the Degree of Master of Science**

June 2011

DEDICATION

This work is dedicated to my beloved parents and family and also my dearest friends for their endless love, patience and support.

My Parents and family

ZAINAB TAHIR, ROSLAN SARDEN, FIRDAUS, AFRINA

Abstract of thesis presented to the Senate of Universiti Putra Malaysia in fulfillment of the requirement for the degree of Master of Science

**SHARP-EDGES STEGANOGRAPHY IN ARABIC CHARACTERS FOR
INFORMATION HIDING**

By

NUUR ALIFAH BINTI ROSLAN

June 2011

Supervisor : Ramlan Mahmud, PhD

Faculty : Computer Science and Information Technology

Steganography also known as covered writing creates attention in information hiding field in the past few years in the information security research area. Since the benefit towards this knowledge as the best way of covert communication, many methods and algorithms were implemented through Steganography. Even though many research were concern on image steganography, but in the past two years the text steganography had come with many algorithms and methods. There are two main issues arise in the text steganography: firstly, is a limited redundancy place to hide secret bit which lead to low capacity in hiding secret bits; and the second issue is to have a high invisibility stego-text document at the same time. In order to resolve the problem, sharp-edges stego method focusing in the individual Arabic characters as the redundant data. By using the

sharp-edges for each Arabic character, each character in the cover text has possibility one to five places of hiding secret bits where, the number of sharp-edges is equals to the number of places to hide the secret bit. As a result, the capacity was increased up to 37.8% compared to the previous works and this method has high invisibility with 1.02 points over 10 points in invisibility ratio. Finally, the sharp-edges stego method had utilized the Arabic text for text steganography and this method also can be implemented to the same area of language such as Jawi, Persian or Urdu.

Abstrak tesis ini dikemukakan kepada Senat Universiti Putra Malaysia bagi memenuhi syarat-syarat untuk memperolehi Ijazah Master Sains

**STEGANOGRAFI PINGGIR-TAJAM DALAM AKSARA ARAB BAGI
PENYEMBUNYIAN MAKLUMAT**

Oleh

NUUR ALIFAH BINTI ROSLAN

Jun 2011

Penyelia : Ramlan Mahmod, PhD

Fakulti : Sains Komputer dan Teknologi Maklumat

Bidang kajian penyelidikan steganografi yang juga dikenali sebagai “penulisan yang tersembunyi” mencuri perhatian dalam bidang penyembunyian maklumat kebelakangan ini terutama dalam lapangan keselamatan maklumat. Memandangkan banyak kebaikan steganografi dalam lapangan penyembunyian maklumat ini sebagai komunikasi terlindung, maka terdapat banyak implementasi dari segi algoritma dan kaedah dalam bidang steganografi. Terdapat dua isu utama yang muncul didalam steganografi teks: terbatasnya bit rahsia yang menjurus kepada kurangnya muatan bagi penyembunyian bit rahsia; pada masa yang sama perlu meningkatkan kesamaran dokumen teks-stego. Bagi menyelesaikan masalah tersebut, kaedah pinggir-tajam stego telah memberi tumpuan pada setiap aksara individu bagi set aksara dalam dokumen teks sebagai data yang

berulang. Dengan menggunakan pinggir-tajam bagi setiap aksara Arab di dalam teks penyembunyi, mereka mempunyai kebarangkalian menyembunyikan satu atau lima bit rahsia dimana, jumlah pinggir-tajam itu adalah bersamaan jumlah tempat untuk menyembunyikan bit rahsia. Sebagai hasilnya, muatan bagi bit rahsia telah meningkat kepada 37.8% berbanding kaedah-kaedah sebelum ini dan kaedah ini juga memiliki kesamaran yang tinggi iaitu 1.02 mata berbanding 10 mata dalam skala kesamaran. Akhir sekali, kaedah pinggir-tajam ini telah memanfaatkan sepenuhnya ruang-rupa aksara Arab untuk teks steganografi dan kaedah ini juga boleh diaplikasikan pada bahasa yang sama jenis seperti Jawi, Parsi atau Urdu.

ACKNOWLEDGEMENTS

Syukur Alhamdulillah to The Almighty God for His shower of blessing, I am able to complete this study.

I wish to express my sincere and deep gratitude to my Supervisor Assoc. Prof. Dr. Ramlan Mahmud and my co-supervisors, Dr. Nur Izura Udzir for their invaluable ideas, guidance, patience and support which have contributed to the success of this thesis and also to Assoc. Prof. Dr. Adnan Ghutub from King Fard Engineering University, Saudi Arabia for the scientific collaboration in sharing information regarding Arabic Text Steganography.

My special appreciation goes to my family and my friends Kak Shamima, Zalinda, Huda, Wan Atiqah and Kauthar, for their encouragement through this research work and also to my foreign friends, Dhuha (Sudan) and Salwa (Iraq) for helping me in understanding the Arabic language, Arabic character and Arabic Unicode ; Roya (Iran), very helpful in my data preparation.

Last but not least, I would like to thank all the professors and lecturers from Faculty of Science Computer and Information Technology and those who had helped me directly and indirectly in order to improve and complete this thesis.

I certify that the Examination Committee has met on 20 Jun 2011 to conduct the final examination of Nuur Alifah binti Roslan on her thesis entitled “Sharp-Edges Stego Method in Arabic Character for Information Hiding” in accordance with the Universities and University Colleges Act 1971 and the Constitution of the Universiti Putra Malaysia [P.U.(A) 106] 15 March 1998. The Committee recommends that the student be awarded the Master of Science.

Members of the Examination Committee were as follows:

Rusli bin Hj Abdullah, PhD

Associate Professor
Faculty of Science Computer and Information Technology
Universiti Putra Malaysia
(Chairman)

Md Nasir bin Sulaiman, PhD

Associate Professor
Faculty of Science Computer and Information Technology
Universiti Putra Malaysia
(Internal Examiner)

Muhamad Taufik bin Abdullah, PhD

Lecturer
Faculty of Science Computer and Information Technology
Universiti Putra Malaysia
(Internal Examiner)

Azizah binti Abdul Manaf, PhD

Professor
Advanced Informatics Schools (Ais)
University Technology Malaysia
(External Examiner)

BUJANG KIM HUAT, PhD

Professor and Deputy Dean
School of Graduate Studies
Universiti Putra Malaysia

Date: 20 Jun 2011

This thesis was submitted to the Senate of Universiti Putra Malaysia and has been accepted as fulfillment of requirement for the degree of Master of Science. The members of supervisory Committee were as follows:

Ramlan Mahmud, PhD

Professor
Faculty of Computer Science
Universiti Putra Malaysia
(Chairman)

Nur Izura Udzir, PhD

Faculty of Computer Science
Universiti Putra Malaysia
(Member)

HASANAH MOHD. GHAZALI, PhD

Professor and Dean
School of Graduate Studies
Universiti Putra Malaysia

Date:

DECLARATION

I declare that the thesis is my original work except for quotations and citations, which have been duly acknowledged. I also declare that it has not been previously and is not concurrently, submitted for any other degree at Universiti Putra Malaysia or other institutions.
