Let p be a prime and $f(x,y)$ be a polynomial in $Z_p[x,y]$. For $\alpha > 1$, the exponential sums associated with f modulo a prime p^α is defined as $S(f; p^\alpha) = \sum_{x,y \bmod p^\alpha} e_{p^\alpha}(f(x,y))$. Estimation of $S(f; p^\alpha)$ has been shown to depend on the number and p -adic sizes of common roots of the partial derivative polynomials of f . The objective of this research is to arrive at such estimations associated with a quadratic and cubic polynomials $f(x,y)$.

To achieve this objective we employ the p -adic methods and Newton polyhedron technique to estimate the p -adic sizes of common zeros of partial derivative polynomials associated with quadratic and cubic forms. The combination of indicator diagrams associated with the polynomials are examined and analyzed especially on cases where p -adic sizes of common zeros occur at the overlapping segments of the indicator diagrams. Cases involving p -adic sizes of common zeros

that occur at simple points of intersection and the vertices have been investigated by earlier researchers.

The information obtained above is then applied to estimate the cardinality of the set $V(f_x, f_y; p^\alpha)$. This estimation is then applied in turn to arrive at the estimation of exponential sums for quadratic and cubic polynomials.

Katakan p suatu nombor perdana dan $f(x,y)$ suatu polinomial dalam $Z_p[x,y]$. Untuk $\alpha > 1$, hasil tambah eksponen yang disekutukan dengan f modulo p^α ditakrifkan sebagai $S(f; p^\alpha) = \sum_{x,y \bmod p^\alpha} e_{p^\alpha}(f(x,y))$ yang dinilai bagi semua x dan y di dalam set reja lengkap modulo p^α . Penganggaran $S(f; p^\alpha)$ telah ditunjukkan bersandar kepada bilangan dan saiz p -adic pensifar sepunya polinomial terbitan separa f . Objektif kajian ini adalah untuk mendapatkan penganggaran hasil tambah eksponen disekutukan dengan polinomial $f(x,y)$ berbentuk kuadratik dan kubik.

Untuk mencapai objektif di atas kami menggunakan kaedah p -adic dan teknik polihedron Newton untuk menganggarkan saiz p -adic pensifar sepunya polinomial terbitan separa yang disekutukan dengan polinomial kuadratik dan kubik. Kombinasi

gambar rajah penunjuk yang disekutukan dengan polinomial di atas diperiksa dan dianalisis terutama bagi kes saiz p -adic pensifar sepunya yang berlaku di tembereng bertindih gambar rajah penunjuk. Kes saiz p -adic pensifar sepunya berlaku pada titik persilangan mudah dan bucu telah disiasat oleh pengkaji dahulu.

Keputusan yang diperolehi digunakan untuk menganggarkan kekardinalan bagi set $V(f_x, f_y; p^\alpha)$. Penganggaran tersebut kemudiannya digunakan untuk mendapatkan penganggaran hasil tambah eksponen yang disekutukan dengan polinomial kuadratik dan kubik.

ACKNOWLEDGEMENTS

I am thankful to Professor Dato' Dr. Haji Kamel Ariffin Bin Mohd Atan, my supervisor, for his guidance, encouragement, patience, advice and critical reviews towards completion of my study and thesis. Without his guidance and help from the initial to the final level that enabled me to develop an understanding of the study, I could never accomplish this difficult task. I would also like to extend my gratitude to my co-supervisor, Dr. Siti Hasana Binti Sapar for her guidance, providing related information, and advice. I would also like to express my gratitude to all lecturers who had taught me before.

I am grateful to all my friends for giving me advice and providing related information in my study. They also gave me support and encouragement whenever I encounter problems.

Finally, my appreciation goes to my dearest parents and beloved family for their understanding, endless patience and encouragement when it was most required. I would like to share my enjoyment with them, they will always in my heart.

I certify that a Thesis Examination Committee has met on 2 December 2010 to conduct the final examination of Yap Hong Keat on his thesis entitled “Estimation of Exponential Sums using P-Adic Methods and Newton Polyhedron Technique” in accordance with the Universities and University College Act 1971 and the Constitution of the Universiti Putra Malaysia [P.U.(A) 106] 15 March 1998. The committee recommends that the student be awarded the Master of Science.

Members of the Thesis Examination Committee were as follows:

Mohamad Rushdan bin Md Said, PhD

Associate Professor
Faculty of Science
Universiti Putra Malaysia
(Chairman)

Isamiddin S.Rakhimov, PhD

Associate Professor
Faculty of Science
Universiti Putra Malaysia
(Internal Examiner)

Nik Mohd Asri bin Nik Long, PhD

Associate Professor
