Faculty : Institute for Mathematical Research

Diophantine equation is an equation in which solutions to it are from some predetermined classes and it is one of the oldest branches of number theory. There are many types of diophantine equations, for instance linear diophantine equation, exponential diophantine equation and others.

In this research, we will investigate and find the integral solutions to the diophantine equation $x^2 + 2^a \cdot 7^b = y^n$ where a and b are positive integers and n is even. By fixing $n = 2r$, we determine the generators of x and y^r for $1 \leq a \leq 6$ with any values of b . Then, we investigate the necessary conditions to obtain integral solutions of x and y under each value of a if there is any.

The approach is by looking at the possible combinations for the product $2^a \cdot 7^b$ and solving the equations simultaneously. Then, from the results obtained, we substitute the values of a followed by b to get integer values of x and y^r under each category.

After that, the equations are grouped according to the pattern that emerged and a geometric progression formula is applied to create the general formulae for the generators of solutions to the equation examined.

Besides that, we have to identify the range of i , the number of non-negative integral solutions associated with each b for different values of a . When b is even, we find some special cases of determining the generators of solutions for x and y^r with a certain condition.

From our investigation, we find that there is no integral solution of x and y^r to the diophantine equation $x^2 + 2^a \cdot 7^b = y^n$, when n is even and $a = 1$. It is found that the number of generators to determine the integral solutions to the equation depend on the values of a . Values of y are determined by taking the r -th root of y^r for certain values of r .

Abstrak tesis yang dikemukakan kepada Senat Universiti Putra Malaysia sebagai memenuhi keperluan untuk ijazah Master Sains

PENYELESAIAN INTEGER KEPADA PERSAMAAN $x^2 + 2^a \cdot 7^b = y^n$

Persamaan diofantus merupakan persamaan di mana penyelesaiannya terdiri daripada kelas-kelas yang telah ditentukan dan ia merupakan salah satu cabang yang paling lama dalam teori nombor. Terdapat banyak jenis persamaan diofantus seperti persamaan diofantus linear, persamaan diofantus eksponen dan sebagainya.

Dalam kajian ini, kita akan mengkaji dan mencari penyelesaian integer bagi persamaan diofantus $x^2 + 2^a \cdot 7^b = y^n$ di mana a, b integer positif dan n adalah genap. Dengan menetapkan $n = 2r$, kita menentukan penjana bagi x dan y^r bagi $1 \leq a \leq 6$ dengan sebarang nilai b . Kemudian, kita akan mengkaji syarat perlu untuk memperolehi penyelesaian integer bagi x dan y bagi setiap nilai a jika wujud.

Pendekatannya adalah dengan mencari kombinasi yang mungkin wujud bagi hasil darab $2^a \cdot 7^b$ dan menyelesaikannya secara serentak. Daripada keputusan yang diperolehi, kita menggantikan nilai a diikuti dengan b untuk mendapatkan nilai

integer bagi x dan y^r dalam setiap kategori. Selepas itu, kumpulkan persamaan tersebut mengikut pola yang muncul dan menggunakan rumus janjang geometri untuk membentuk rumus umum yang menghasilkan penjana-panjana bagi penyelesaian dalam persamaan yang diperiksa.

Selain itu, kita juga akan mengenalpasti julat bagi i , bilangan penyelesaian integer tak negatif yang disekutukan dengan setiap b bagi nilai a yang berlainan. Sekiranya b adalah genap, kita dapati beberapa kes khusus bagi menentukan penjana-penjana penyelesaian untuk x dan y^r dengan syarat tertentu.

Daripada kajian ini, kita dapati bahawa tiada penyelesaian integer untuk x dan y^r bagi persamaan diofantus $x^2 + 2^a \cdot 7^b = y^n$ dengan n genap dan $a = 1$. Kemudian, bilangan panjana untuk menentukan penyelesaian integer bagi persamaan adalah bergantung kepada nilai a . Nilai bagi y ditentukan dengan mengambil punca kuasa dua r bagi y^r , dengan nilai tertentu bagi r sahaja.

ACKNOWLEDGEMENTS

First of all, I would like to express my deep appreciation and sincere gratitude to my supervisory committee, Dr. Siti Hasana Binti Sapar and Prof. Dato' Dr. Kamel Ariffin Mohd Atan for their guidance, patience, advice, and responsibility during my theoretical work and preparation for the thesis. Without their guidance, I think it will be hard for me to accomplish my every single task successfully and complete my thesis on time due to my little experience before. Therefore, from the bottom of my heart, a heart full of thanks for both of them since they are so nice and play an essential role in assisting me to complete my research.

Also, I wish to thank my partner, See Kok Leong for helping me within this period by providing me with some advantageous and beneficial ideas. His contributions are very useful and help me to take a huge step forward. Thank you for all the information that has been given.

I would like to express my deep appreciation to all my dear friends and my beloved family who are always around to give me a hand when needed and support me all the time. All the encouragement and support will be appreciated and I must apologize here for I am not able to mention all your names here.

A million thanks to everyone who has ever helped me and I would like to apologize if I miss out anyone here.

I certify that a Thesis Examination Committee has met on **28 October 2011** to conduct the final examination of Yow Kai Siong on his thesis entitled “ **Integral Solutions to the Equation $x^2 + 2^a \cdot 7^b = y^n$** ” in accordance with the Universities and University Colleges Act 1971 and the Constitution of the Universiti Putra Malaysia [P. U. (A) 106] 15 March 1998. The Committee recommends that the student be awarded the Master of Science.

Members of the Thesis Examination Committee were as follows:

Zarina Bibi Binti Ibrahim, PhD

Senior Lecturer
Faculty of Science
Universiti Putra Malaysia
(Chairman)

Mohamad Rushdan Bin Md. Said, PhD

Associate Professor
Faculty of Science
Universiti Putra Malaysia
(Internal Examiner)

Mat Rofa Bin Ismail, PhD

Associate Professor
Faculty of Science
Universiti Putra Malaysia
(Internal Examiner)

Roslan Hasni @ Abdullah, PhD

Associate Professor
School of Mathematical Sciences
Universiti Sains Malaysia
(Internal Examiner)

SEOW HENG FONG, PhD

Professor and Deputy Dean
