Chairman: Professor Borhanuddin Mohd. Ali, PhD

Faculty: Engineering

There have been rapid changes in the networking field in the past decade or so, mainly due to an exponential growth in the number of users and traffic volumes, and emergence of new applications. This has caused a higher demand for bandwidth, with better quality of service and reduced blocking probability. Meeting this demand efficiently would be possible in high-speed optical networks with a proper switching paradigm employing dynamic reservation schemes.

Optical burst switching (OBS) is a new switching concept, based on ideas developed for electronic burst switching almost two decades ago. Now the idea has evolved to become a paradigm, which combines the best of both switching techniques i.e. circuit switching and packet switching, thus overcoming the inherent setbacks in the respective switching techniques. OBS applies an out of band signaling technique, which enables the bandwidth reservations to be made in advance.

In this thesis, two modified reservation schemes are proposed based on the prioritized just enough time (pJET) and Horizon reservation schemes, which are referred to as the prioritized just enough time with variable extra offset time (pJET_VEOT) and the prioritized Horizon (pHorizon), respectively.

These reservation schemes are designed to reduce the blocking probabilities of both classes of traffic, i.e. real-time (RT) and non real-time traffic (NRT), while provisioning sufficient Quality of Service (QoS) for ensured and timely delivery of higher priority traffic. Performance evaluation is conducted in order to analyze the reduction in blocking probability, the effect on system delay and to display the service differentiation achieved. This is done by comparing the proposed schemes to its predecessor schemes respectively. The predecessor schemes used in the simulation are pJET, Just Enough Time (JET) and Horizon.

The proposed schemes, pHorizon and pJET_VEOT show a significant reduction in blocking probabilities and along with sufficient provisioning of QoS for both classes of traffic tested, i.e. the RT and NRT when compared to Horizon, JET and pJET respectively.

Abstrak tesis yang dikemukakan kepada Senat Universiti Putra Malaysia sebagai memenuhi sebahagian keperluan untuk ijazah Master Sains

**PENILAIAN PERLAKSANAAN SKIMA PENEMPAHAN PHORIZON DAN
PJET_VEOT BAGI PENSUISAN LEDAKAN OPTIK**

Oleh

DEEPALAXMI SILVARAJAH

Fakulti: Kejuruteraan

Perubahan yang pantas dalam bidang rangkaian sejak sedekad yang lalu disebabkan oleh peningkatan yang pesat dalam pengguna internet, peningkatan saiz trafik dan kemunculan aplikasi-aplikasi baru. Ini secara tidak langsung telah menyebabkan tuntutan yang tinggi ke atas jalur lebar-lingkaran, kualiti perkhidmatan yang lebih baik, dan juga telah mengurangkan kebarangkalian penghalangan. Tuntutan ini mungkin boleh dihadapi dengan efisien dengan penggunaan rangkaian optik pantas serta paradigma pensuisan baik yang mengaplikasikan skima penempahan yang dinamik.

Pensuisan ledakan optik (OBS) merupakan suatu konsep pensuisan baru, yang telah dibangunkan daripada idea-idea pensuisan ledakan elektronik lebih kurang dua dekad lalu. Kini, idea ini telah berkembang menjadi sebuah paradigma yang terdiri daripada gabungan kelebihan-kelebihan daripada dua teknik pensuisan yang terkenal iaitu pensuisan litar dan pensuisan paket, sekaligus ia mengatasi kekurangan yang dihadapi oleh kedua-dua teknik pensuisan tersebut. Ia mengaplikasikan teknik pengisyaratan di luar lingkaran, yang membolehkan penempahan jalur lebar-lingkaran di buat lebih dahulu

Dalam tesis ini, dua skima penempahan yang diubahsuai daripada *prioritized just enough time (pJET)* dan *Horizon*, iaitu *prioritized just enough time with variable extra offset time (pJET_VEOT)* dan *prioritized Horizon (pHorizon)* telah dicadangkan.

Skima-skima penempahan in telah direkabentuk supaya ia dapat mengurangkan kebarangkalian penghalangan bagi kedua-dua jenis trafik, iaitu trafik masa-nyata dan trafik masa-tak-nyata, serentak memberi kualiti perkhidmatan yang secukupnya bagi memastikan penghantaran trafik keutamaan tinggi. Penilaian pelaksanaan telah dijalankan bagi mendapatkan perbandingan bagi tujuan

menganalisa kekurangan dalam kebarangkalian penghalangan, kesan kelambatan sistem and juga memaparkan kewujudan pembezaan perkhidmatan. Ini dijalankan dengan membuat perbandingan diantara skema-skema penempahan yang telah dicadangkan dengan skema-skema tetua tertentu. Diantaranya adalah, pJET, *just enough time* (JET) dan *Horizon*.

Skema-skema yang dicadangkan, pJET_VEOT dan pHorizon menunjukkan pengurangan yang ketara dalam penghalangan dan pemberian kualiti perkhidmatan yang secukupnya bagi kedua-dua kelas trafik iaitu trafik masa-nyata dan trafik masa-tak-nyata jika dibandingkan dengan Horizon, JET dan pJET.

ACKNOWLEDGEMENTS

I pay my obeisance and gratitude to the Almighty for giving me the ability to carry out this research work and completing it.

I would like to express my sincere appreciation to my supervisor, Prof. Dr. Borhanuddin Mohd. Ali, for guiding me throughout the conduct of my research and thesis writing.

I would also like to take this opportunity to thank my co-supervisor, Associate Prof. Dr. Sabira Khatun for her comments and suggestions that were of immense help in completing this thesis.

My sincere gratitude also goes to my examiner, Associate Prof. Dr. Mohamad Khazani Abdullah for generously providing very useful guidance and suggestion, which enabled me to strengthen this thesis in terms of scope and clarity.

My appreciation also goes to my former supervisor, Dr. Mohamad Hadi Habaebi, for introducing me to the concept of Optical Burst Switching and the reservation schemes involved. He also provided me with all the necessary journals, papers and publications for me to start on this research.

I sincerely wish to thank my friends and colleagues for their motivation, support and help accorded throughout my study at University Putra Malaysia. This is also extended to everyone who has helped me directly or indirectly in making my graduate studies a smooth journey.

Last but not the least, I would like to express my gratitude and appreciation to my family for their guidance, encouragements, moral support and their patience in tolerating my idiosyncrasies throughout my course of study and research work.

I certify that an Examination Committee has met on 21st April 2006 to conduct the final examination of Deepalaxmi Silvarajah on her Master of Science thesis entitled “Performance Evaluation of pHorizon and pJET_VEOT Reservation Schemes for Optical Burst Switching” in accordance with Universiti Pertanian Malaysia (Higher Degree) Act 1980 and Universiti Pertanian Malaysia (Higher Degree) Regulations 1981. The Committee recommends that the candidate be awarded the relevant degree. Members of the Examination Committee are as follows:

MOHAMMAD HAMIRUCE MARHABAN, PhD

Lecturer
Faculty of Engineering
Universiti Putra Malaysia
(Chairman)

MOHAMAD KHAZANI ABDULLAH, PhD

Associate Professor
Faculty of Engineering
Universiti Putra Malaysia
(Internal Examiner)

MOHD. ADZIR MAHDI, PhD

Associate Professor
Faculty of Engineering
Universiti Putra Malaysia
(Internal Examiner)

ABU BAKAR MOHAMMAD, PhD

Professor
Faculty of Engineering
Universiti Teknologi Malaysia
(External Examiner)

HASANAH MOHD. GHAZALI, PhD

Professor/Deputy Dean
School of Graduate Studies
Universiti Putra Malaysia

Date:

This thesis submitted to the Senate of Universiti Putra Malaysia and has been accepted as fulfilment of the requirement for the degree of Master of Science. The members of the Supervisory Committee are as follows:
