2,2'-[2,5-Bis(hexyloxy)-1,4-phenylene]dithiophene.

ABSTRACT

The asymmetric unit of the title compound, C26H34O2S2, comprises one half-molecule located on an inversion centre. The thiophene groups are twisted relative to the benzene ring, making a dihedral angle of $5.30~(7)^{\circ}$, and the n-hexyl groups are in a fully extended conformation. In the crystal, there are short C— $H(...)\pi$ contacts involving the thiophene groups.
