Abstract of thesis presented to the Senate of Universiti Putra Malaysia in fulfilment of the requirement for the degree of Master of Science

TWO - POINT BLOCK BACKWARD DIFFERENTIATION FORMULA FOR SOLVING HIGHER ORDER ORDINARY DIFFERENTIAL EQUATIONS

By

NOORAINI BINTI ZAINUDDIN

October 2011

Chairman: Zarina Bibi Binti Ibrahim, PhD

Faculty: Science

This thesis focuses on solving higher order Ordinary Differential Equations (ODEs) directly using the Block Backward Differentiation Formula (BBDF) method. The BBDF method approximates the solution at two points concurrently. Implementation of this method is done by using equidistant stepsize on the set of stiff problems.

The first part of the thesis gives the derivation of the BBDF method for solving second order and third order stiff ODEs directly. The algorithms are written in C language and the numerical results of these methods are compared to that of reducing it to a system of first order ODEs and solves using the first order ODEs method.

The subsequent part of the thesis discusses in detail the stability properties of the BBDF method which are given in the previous part. The stability properties justify the efficiency of the BBDF method as used in solving stiff problems. The illustrations of the stability region are provided.

Finally, this thesis zooms into the implementation of the BBDF method using the variable order algorithm for the solution of second order stiff ODEs directly. The variable order strategies for the BBDF method is elaborated and the numerical result of the variable order BBDF method is compared with the variable order method which is available in MATLAB.

In conclusion, the results show that BBDF method reduces the total number of steps and the time execution when compared to the nonblock first order ODEs method. Therefore, these new methods present significant alternatives for solving higher order ODEs directly.

Abstrak tesis yang dikemukakan kepada Senat Universiti Putra Malaysia sebagai memenuhi keperluan untuk ijazah Master Sains

**DUA - TITIK BLOK FORMULASI BEZA KE BELAKANG UNTUK
PENYELESAI PERSAMAAN PEMBEZAAN BIASA PERINGKAT TINGGI**

Oleh

NOORAINI BINTI ZAINUDDIN

Oktober 2011

Pengerusi: Zarina Bibi Binti Ibrahim, PhD

Fakulti: Sains

Tesis ini tertumpu kepada penyelesaian Persamaan Pembezaan Biasa (PPB) peringkat tinggi secara terus menggunakan kaedah Blok Formulasi Beza ke Belakang (BFBB). Kaedah BFBB mengangarkan penyelesaian pada dua titik secara serentak. Pelaksanaan kaedah ini dilakukan dengan menggunakan saiz langkah sama jarak ke atas set masalah kaku.

Bahagian pertama tesis ini memberikan penerbitan kaedah BFBB untuk menyelesaikan PPB kaku peringkat kedua dan ketiga secara terus. Algoritma ditulis dalam bahasa C dan keputusan berangka kaedah ini dibandingkan dengan penurunan

kepada sistem PPB pada peringkat pertama dan diselesaikan dengan menggunakan kaedah PPB peringkat pertama.

Bahagian selanjutnya dalam tesis ini membincangkan secara terperinci ciri-ciri kestabilan oleh kaedah BFBB yang diberikan pada bahagian terdahulu. Ciri-ciri kestabilan mewajarkan keberkesanan kaedah BFBB untuk digunakan dalam menyelesaikan masalah kaku. Ilustrasi kepada rantau kestabilan diberikan.

Akhirnya, tesis ini tertumpu kepada pelaksanaan kaedah BFBB menggunakan algoritma peringkat berubah untuk penyelesaian PPB kaku peringkat kedua secara terus. Strategi peringkat berubah untuk kaedah BFBB dihuraikan dan keputusan berangka untuk kaedah BFBB peringkat berubah dibandingkan dengan kaedah peringkat berubah yang terdapat di MATLAB.

Kesimpulannya, keputusan menunjukkan kaedah BBDF mengurangkan jumlah langkah dan masa pelaksanaan apabila dibandingkan dengan kaedah PPB peringkat pertama bukan blok. Oleh itu, kaedah-kaedah baru ini menjadi pilihan yang wajar untuk menyelesaikan PBB peringkat tinggi secara terus.

ACKNOWLEDGEMENTS

In the Name of Allah

The Most Beneficent, The Most Merciful

First and foremost, I would like to express my deepest gratitude to the Chairman of the Supervisory Committee, Dr. Zarina Bibi bt. Ibrahim for her wise guidance, invaluable advice and patience throughout my research.

I am also very grateful to the member of Supervisory Committee, YBhg. Prof. Dato' Dr. Mohamed bin Suleiman and Associate Professor Dr. Khairil b. Othman for their kind support, suggestion and assistance in the completion of this research.

The financial support from Jabatan Perkhidmatan Awam (JPA) for the scholarship awarded that enables me to pursue this research. Many thanks also to my colleagues and friends for their support and help throughout the years spent in this research.

Lastly, my special thanks and deepest grateful goes to my family for their continuous understanding, caring, support and the love that has inspires me to excel in this life.

I certify that a Thesis Examination Committee has met on 17 October 2011 to conduct the final examination of Nooraini binti Zainuddin on her thesis entitled "Two-Point Block Backward Differentiation Formula for Solving Higher Order Ordinary Differential Equations" in accordance with the Universities and University College Act 1971 and the Constitution of the Universiti Putra Malaysia [P.U.(A) 106] 15 March 1998. The committee recommends that the student be awarded the Master of Science.

Members of the Thesis Examination Committee were as follows:

Idham Arif bin Hj. Alias, PhD

Senior Lecturer
Faculty of Science
Universiti Putra Malaysia
(Chairman)

Fudziah binti Ismail, PhD

Associate Professor
Faculty of Science
Universiti Putra Malaysia
(Internal Examiner)

Leong Wah June, PhD

Associate Professor
