NUTRITIONAL COMPOSITION AND ANTIOXIDANT ACTIVITIES OF
Ficus Carica L. FRUITS AND LEAVES FROM SAUDI ARABIA

By

FATIMAH GHAZI HILAL ALQATHAMA

Thesis submitted to the School of Graduate Studies, Universiti Putra Malaysia, in
Fulfillment of the Requirement for the Degree of Master of Science

December 2012
DEDICATION

This thesis is dedicated to my parents and who have supported me all the way since the beginning of my studies and for instilling the importance of hard work. Also, this thesis is dedicated to my brothers who have been a great source of motivation and patience and understanding. My sisters, who offered me unconditional love, support throughout the course and encouragement. Thanks also to my friends, who were always willing to partake. Finally, I offer my regards and blessings to all of those who supported me in any respect during the completion of the project.
Abstract of thesis presented to the senate of Universiti Putra Malaysia in fulfillment of the requirement for the degree of Master of Science

NUTRITIONAL COMPOSITION AND ANTIOXIDANT ACTIVITIES OF *Ficus Carica* L. FRUITS AND LEAVES FROM SAUDI ARABIA

By

FATIMAH GHAZI HILAL ALQATHAMA

December 2012

Chairman: Asmah bt Rahmat, PhD

Faculty: Medicine and Health Sciences

Traditional medicines derived from medicinal plants are used by about 60% of the world’s population. Fruits and herbs contain constituents which have antioxidant properties and may have an inhibitory effect on free radical-induced oxidative damage to biological substances and tissues. Studies of the effective antioxidants in fruits and herbs may provide a great potential in prevention of disease. *Ficus carica* have been identified as one of the nutritional sources of antioxidants. In this study the total phenolic compounds, antioxidant activity and nutritional value in *F. carica* fruits and leaves from Saudi Arabia was investigated. The total phenolic content (Folin-Ciocalteu assay), antioxidant capacity FRAP assay (Ferric Reducing Antioxidant Power) and DPPH assay (1, 1-diphenyl-2-picrylhydrazyl) were determined (methanol and aqueous extract using solvent. In addition, vitamins C and E contents in *Ficus carica* was also investigated using high performance liquid chromatography (HPLC),
as well as mineral using atomic absorption spectrophotometric (AAS) methods was also evaluated. This research was focused on two species of *F. carica*. Both Hamat and Balas were differentiated according to the size of fruits and leaves. The results indicated that the Hamat fruit had greater antioxidant capacity, total phenols, and ascorbic acid content than Balas fruits. Aqueous extract of Hamat had a significantly much higher content of total phenolic 347.31±4.38 mg GAE/100g while methanolic extract 229.15 ±1235 mg GAE/100g. The aqueous extract of Hamat had the higher DPPH radical scavenging activity 83.67±1.19% than Balas fruit 46.02±2.87%. Balas leaf aqueous extract achieved the higher percentage of radical scavenging activity 74.58±1.60% compared to methanolic extract 63.29±2.5174%. Balas fruit had the high carbohydrate content 19.2±0.17 and low fat content 0.3±0.14 g /100 g. The Balas leaf had high protein content 5.1 ±0.46 and fat content 1.3 ±0.35 g /100 g. Additionally, both leaves and fruits were shown to contain high amounts of minerals as well as vitamins C and E. In summary, both *F. carica* fruits and leaves are good sources of dietary antioxidants and processing products as dietary supplements. The *F. carica* are rich in mineral elements especially in calcium and potassium and also good nutritional composition. *F. carica* seems to contain high amounts of phenolic compounds with antioxidant activities as well as a good natural source of antioxidants which may potentially reduce the oxidative stress (triggered by chronic diseases). Thus, *F. carica* could be considered as an alternative and potential source of natural antioxidant. Generally, the present study showed *Ficus carica* juice and its components are good source of macronutrients. *F. carica* juices are rich in antioxidant vitamins. In the current study, the DDPH and FRAP indicates a strong antioxidant activities, this could be due to total phenolic content and vitamins of *F. carica* juice.
Abstrak tesis yang dikemukakan kepada Senat Universiti Putra Malaysia sebagai memenuhi keperluan untuk ijazah Master Sains

KOMPOSISI PEMAKANAN DAN AKTIVITI ANTIOKSIDAN BUAH DAN DAUN *Ficus Carica* L. DARI SAUDI ARABIA

Oleh

FATIMAH GHAZI HILAL ALQATHAMA

Disember 2012

Pengerusi: Asmah bt Rahmat, PhD

Fakulti: Perubatan dan Sains Kesihatan

Perubatan tradisional daripada tumbuhan dengan ciri perubatan telah digunakan sebanyak 60% populasi dunia. Buah-buahan dan herba-herba mengandungi konstituen yang menunjukkan ciri antioksidan dan mungkin mempunyai kesan perencatan ke atas radikal bebas yang menginduksi masalah oksidasi kepada bahan biologi dan tisu. Kajian tentang antioksidan yang efektif di dalam buah dan herba boleh memberi potensi hebat dalam pencegahan penyakit. *Ficus carica* telah dikenalpasti sebagai salah satu sumber antioksidan. Dalam kajian ini, jumlah polifenol, aktiviti antioksidan dan nilai pemakanan dalam buah *Ficus carica* dan daun spesies dari Saudi Arabia ini telah ditentukan. Jumlah kandungan polifenol (kaedah Folin-Ciocalteu), kapasiti antioksidan FRAP kaedah penurunan ion ferum/potensi antioksidan dan DPPH kaedah 1,1-diphenyl-2-pircrylhydrazyl telah ditentukan (ekstrak metanol dan akueus digunakan sebagai pelarut). Tambahan lagi, kandungan vitamin C dan E dalam *Ficus carica* juga ditentukan menggunakan kromatografi cecair berprestasi tinggi (HPLC) serta mineral menggunakan kaedah spektrofotometri penyerapan atom (AAS) telah dinilai. Penyelidikan ini telah difokuskan ke atas dua spesies *F. carica*. Kedua-dua
Hamat dan Balas telah dibeza berdasarkan saiz buah dan daun. Keputusan menunjukkan buah Hamat mempunyai kapasiti antioksidan, jumlah polifenol dan asid askorbik yang lebih tinggi daripada buah Balas. Ekstrak akueus Hamat mempunyai kandungan yang signifikan bagi jumlah polifenol (347.31±4.38 mg GAE/100g), manakala ekstrak metanol 229.15 ±1235 mg GAE/100g. Ekstrak akueus Hamat mempunyai aktiviti penghapusan radikal DPPH yang lebih tinggi (83.67±1.19%) daripada buah Balas (46.02±2.87%). Ekstrak akueus daun Balas mencapai peratus aktiviti penghapusan radikal yang lebih tinggi (74.58±1.60%) berbanding dengan ekstrak methanol (63.29±2.52%). Buah Balas mempunyai tinggi kandungan karbohidrat 19.2±0.17 dan rendah lemak 0.3 ±0.14 g /100 g. Manakala daun Balas mempunyai tinggi kandungan protein 5.1 ±0.46 dan kandungan lemak 1.3 ±0.35 g /100 g. Tambahan itu, kedua-dua daun dan buah telah menunjukkan tinggi kandungan mineral serta vitamin C dan E. Sebagai ringkasan, kedua-dua buah dan daun F. carica adalah sumber antioksidan yang bagus digunakan dalam pembuatan produk seperti diet tambahan. F. carica adalah kaya dalam kandungan mineral terutama kalsium dan kalium serta komposisi pemakanan yang bagus. F. carica mengandungi tinggi kandungan kompound polifenol dengan aktiviti antioksidan serta sumber antioksidan semula jadi yang bagus di mana mungkin berpotensi mengurangkan stress oksidatif (dicetuskan dari penyakit kronik). Maka, F. carica boleh dipertimbangkan sebagai alternatif dan sumber potensi antioksidan semula jadi. Secara umum, kajian ini menunjukkan jus Ficus carica dan komponennya adalah sumber yang bagus dengan makronutrien. Jus Ficus carica juga kaya dengan vitamin antioksidan. Dalam kajian ini, DPPH dan FRAP menunjukkan aktiviti antioksidan yang tinggi, ini boleh disebabkan kehadiran kandungan jumlah polifenol dan vitamin dalam jus Ficus carica.
I am heartily thankful to my helpful supervisor Prof. Dr. Asmah bt Rahmat, my grateful thanks to my co-supervisor Assoc. Prof Dr. Zaitun Bt Yassin for her encouragement, guidance and support from the initial to the final level of this study which enabled me to understand the subject. I would like to thank the laboratory staffs of Nutritional Science Department for their support.

I would like to thank my family members, especially my Mum and Am-Ahmad for supporting and encouraging me to pursue this degree. Without their encouragement, I would not have finished the degree.

I also wish to express my heartfelt thanks to the many friends who responded to my numerous questions. Last but not least I would like to express my deepest gratitude to everybody who has a hand on my success without mentioning each.
I certify that a Thesis Examination Committee has met on 21 Disember 2012 viva voce to conduct the final examination of Fatimah Ghazi Hilal Alqathama on her thesis entitled "Nutritional Composition and Antioxidant Activities of Ficus Carica L. Fruits and Leaves From Saudi Arabia" in accordance with the Universities and University Colleges Act 1971 and the Constitution of the Universiti Putra Malaysia [P.U.(A) 106] 15 March 1998. The Committee recommends that the student be awarded the Master of Science.

Members of the Thesis Examination Committee were as follows:

Rokiah binti Mohd Yusof, PhD
Associate Professor
Faculty of Medicine and Health Sciences
Universiti Putra Malaysia
(Chairman)

Norhaizan binti Mohd Esa, PhD
Associate Professor
Faculty of Medicine and Health Sciences
Universiti Putra Malaysia
(Internal Examiner)

Huzwah binti Khazaai, PhD
Senior Lecturer
Faculty of Medicine and Health Sciences
Universiti Putra Malaysia
(Internal Examiner)

Suzana Makpol, PhD
Professor
Faculty of Medicine
Universiti Kebangsaan Malaysia
Malaysia
(External Examiner)

SEOW HENG FONG, PhD
Professor and Deputy Dean
School of Graduate Studies
Universiti Putra Malaysia

Date: 30 April 2013
This thesis was submitted to the Senate of Universiti Putra Malaysia and has been accepted as fulfilment of the requirement for the degree of Master of Science. The members of the Supervisory Committee were as follows:

**Asmah Rahmat, PhD**  
Professor  
Faculty of Medicine and Health Sciences  
Universiti Putra Malaysia  
(Chairman)

**Zaitun Bt. Yassin, PhD**  
Associate Professor  
Faculty of Medicine and Health Sciences  
Universiti Putra Malaysia  
(Member)

## CHAPTER

### 1 INTRODUCTION
1.1 Introduction                                                               1
1.2 Problem statement                                                          3
1.3 Significance of the study                                                  4
1.4 Objectives
   1.4.1 General objectives                                                     4
   1.4.2 Specific objectives                                                    5

### 2 LITERATURE REVIEW
2.1 *Ficus carica*                                                            6
   2.1.1 *Ficus carica* leaf and root                                           7
   2.1.2 *Ficus carica* fruit                                                   9
2.2 Medicine plants in Saudi Arabia                                           12
2.3 Physical characteristics of *Ficus carica* fruit and leaf                12
2.4 Recommended intakes of *Ficus carica*                                     14
2.5 Antioxidants
   2.5.1 Definition of antioxidants and its implication on health             16
   2.5.2 Natural antioxidants                                                 18
   2.5.3 Phenolic compounds                                                   19
   2.5.4 Vitamins                                                            20
   2.5.4.1 Vitamin C                                                          21
   2.5.5.2 Vitamin E                                                        22
2.6 Antioxidant activity                                                      22
   2.6.1 DPPH(1, 1-Diphenyl-2-picrylhydrazyl) assay                           23
   2.6.2 FRAP(Ferric reducing antioxidant power)assay                         24
2.7 Minerals
   2.7.1 Potassium                                                            26
   2.7.2 Calcium                                                              26
   2.7.3 Magnesium                                                            27
   2.7.4 Iron                                                                27
   2.7.5 Manganese                                                           27
MATERIALS AND METHODS

3.1 Samples
3.2 Chemicals
3.3 Instruments
3.4 Study design
3.5 Sample preparation
3.6 Preparation of Ficus carica juice
3.7 Extract preparation
3.8 Proximate analysis

RESULTS

4.1 Proximate nutrient analysis
4.1.1 Proximate analysis of fresh and dried Ficus carica fruit
4.1.2 Proximate analysis of dried Ficus carica leaf
4.2 Mineral content Ficus carica fruit and leaf
4.3 Vitamins
4.3.1 Ascorbic acid content of Ficus carica fruit and leaf extracts
4.3.2 Vitamin E content of Ficus carica fruit and leaf extracts
4.4 Total phenolic content
4.4.1 Total phenolic content in 80% methanol extracts
4.4.2 Total phenolic content in aqueous extracts
4.5 DPPH (1,1-diphenyl-2-picrylhydrazyl) assay
4.5.1 DPPH (1,1-diphenyl-2-picrylhydrazyl) assay in 80% methanol extracts
4.5.2 DPPH (1,1-diphenyl-2-picrylhydrazyl) assay in aqueous extracts
4.6 FRAP (Ferric reducing antioxidant power) assay
4.6.1 FRAP (Ferric reducing antioxidant power) assay in 80% methanol extracts
4.6.2 FRAP (Ferric reducing antioxidant power) assay in...
4.7 Correlation between total phenolic content and antioxidant capacities

4.8 Nutritional composition of fresh Ficus carica juice
  4.8.1 Proximate analyses of fresh Ficus carica juice
  4.8.2 Ascorbic acid contents of fresh Ficus carica juice
  4.8.3 Vitamin E contents of fresh Ficus carica juice
  4.8.4 Total phenolic content of fresh Ficus carica juice
  4.8.5 DPPH (1,1-diphenyl-2-picrylhydrazyl) assay of fresh Ficus carica juice
  4.8.6 FRAP (Ferric reducing antioxidant power) assay of fresh Ficus carica juice

5 DISCUSSION
  5.1 Sample preparation and extraction
  5.2 Proximate analysis of Ficus carica fruit
  5.3 Proximate analysis of Ficus carica leaf
  5.4 Mineral content of Ficus carica fruit and leaf
  5.5 Ascorbic acid content of Ficus carica fruit and leaf
  5.6 Vitamin E content of Ficus carica fruit and leaf
  5.7 Total phenolic content of Ficus carica fruit and leaf
  5.8 DPPH(1,1-diphenyl-2-picrylhydrazyl) assay of Ficus carica fruit and leaf
  5.9 FRAP (Ferric reducing antioxidant power) assay of Ficus carica fruit and leaf
  5.10 Correlation between total phenolic content and antioxidant capacities
  5.11 Nutritional composition of fresh Ficus carica juice
    5.11.1 Proximate analyses of fresh Ficus carica juice
    5.11.2 Ascorbic acid contents of fresh Ficus carica juice
    5.11.3 Vitamin E contents of fresh Ficus carica juice
    5.11.4 Total phenolic content of fresh Ficus carica juice
    5.11.5 DPPH(1,1-diphenyl-2-picrylhydrazyl) assay of fresh Ficus carica juice
    5.11.6 FRAP (Ferric reducing antioxidant power) assay of fresh Ficus carica juice

6 CONCLUSION AND RECOMMENDATION FOR FUTURE RESEARCH
  6.1 Conclusion
  6.2 Recommendation
