## DEDICATION

*“Dedicated to my parents”*

Abstract of this thesis presented to the Senate of the Universiti Putra Malaysia in fulfillment of the requirement for the degree of Master of Science

**FAST ADAPTIVE MOTION ESTIMATION SEARCH ALGORITHM FOR H.264 ENCODER**

**By**

**MD. ANWARUL KAIUM PATWARY**

**July 2012**

**Chair : Professor Mohamed Othman, PhD**

**Faculty : Faculty of Computer Science and Information Technology**

The latest H.264/AVC encoder adopted more advanced techniques such as multiple reference-frame motion estimation, 4 x 4 integers Discrete Cosine Transform (DCT), intra prediction, de-blocking filter, quarter pixel Motion Estimation (ME) with variable block size and novel entropy. Motion estimation is a technique of video compression and video processing applications; it extracts motion information from the video sequence. Multiple reference-frame motion estimation can gain better compression efficiency of video coding for H.264 than previous video standards (e.g MPEG-2, H.263, JPEG). But it leads to higher computational cost and complexity in coding. In this study we proposed an efficient early termination searching method to reduce the computational complexity and achieve better compression ratio.

Adaptive search strategy is applied to reduce the search point in a search range. Furthermore this study presents an analysis of the performance of the proposed algorithm in terms of motion estimation time, total encoding time, video quality (PSNR), and bit rate. Simulation result shows that as compared to previous research, this

algorithm achieves up to average 60% reduction in motion estimation time without degrading the video quality.

Abstrak tesis yang dikemukakan kepada Senat Universiti Putra Malaysia  
sebagai memenuhi keperluan untuk ijazah Master Sains

**ALGORITMA CARIAN ANGGARAN GERAKAN KELAJUAN ADAPTIF  
UNTUK PENGEKOD H.264**

oleh

Pengekod H.264/AVC terkini menggunakan teknik-teknik yang lebih maju seperti rangkaiannya pelbagai anggaran gerakan,  $4 \times 4$  pengubah integer diskret kosinus (DCT), ramalan intra, penapisan, anggaran gerakansukupixel (ME) dengan blok boleh saiz, dan novel entropi. Anggaran gerakannya ialah teknik pemampatan video dan aplikasi pemprosesan video, iaitu mengekstrak maklumat gerak dari urutan video. Anggaran gerakannya rangkaiannya berbilang boleh memperoleh kecekapan pemampatan pengkodan video yang lebih baik untuk H.264 daripada video yang sebelumnya (contohnya MPEG-2, H.263, JPEG). Tetapi ia membawa kepada kos pengiraan yang lebih tinggi dan kerumitan dalam pengkodan. Dalam kajian ini, kami mencadangkan satu kaedah carian penamatan yang lebih cekap untuk mengurangkan kerumitan pengiraan dan mencapai nisbah pemampatan yang lebih baik.

Strategi carian penyelesaian digunakan untuk mengurangkan titik carian dalam julat carian. Selain itu, kajian ini membentangkan analisis prestasi algoritma yang dicadangkan ini sebagai anggaran gerakan, jumlah masapengkodan, kualiti video

(PSNR), dan kadar bit. Keputusan menunjukkan simulasi yang dibandingkan dengan penyelidikan dahulu, algoritma ini mencapai sehingga purata 60% pengurangan masa anggaran bergerak dan pamangkurang kualiti video.

## ACKNOWLEDGEMENTS

First and foremost, all grace and thanks belongs to Almighty Allah for giving me the strength in mentally and have patience to complete this study. I am very thankful and grateful to Professor Dr. Mohamed Othman for his careful guidance, valuable advice, support, and his endless recommendations to complete this research successfully and precisely. Once again my heartiest thanks to him that I could have contacted anytime with him wherever he is. My many thanks to my co-supervisor Dr. RohayaLatip, her guidance and advice was very helpful to write this thesis flawlessly.

My sincere thanks to all the staff of Faculty of Computer Science and Information Technology, School of Graduate Studies, Library, and Universiti Putra Malaysia for providing me the rich research environment.

At last, many thanks to parents, brother, sister for their support what was very valuable to me to complete this study. I would like express my heartiest thanks to my dear fellow friends and research lab mate for their support and help in my hard time and trouble.

## DECLARATION

I declare that the thesis is my original work except for quotations and citations, which have been properly acknowledged. I also declare that it has not been previously, and is not concurrently, submitted for any other degree at Universiti Putra Malaysia or at any other institution.
