Abstract of thesis presented to Senate of Universiti Putra Malaysia in fulfillment of the requirement for the degree of Master of Science

DATA CACHING FRAMEWORK AND STRATEGIES FOR INTEGRITY CONSTRAINT CHECKING IN MOBILE DATABASE SYSTEM

By

ZARINA DZOLKHIFLI

July 2012

Chairman : Associate Professor Hamidah Ibrahim, PhD
Faculty : Computer Science and Information Technology

In a mobile environment, due to the various constraints inherited from limitations of wireless communication and mobile devices, checking for integrity constraints to maintain the consistent state of mobile databases is an important issue that needs to be addressed. Due to limited storage capabilities, a mobile host is not capable of storing all data items in the network, thus it must share some data item with a database in the fixed network. Data caching technique is used to cache frequently accessed data from the base station into mobile hosts. By caching the needed data items, it allows the mobile host to continue processing without worrying about disconnection. The main aim of this research is to propose a framework of data caching for the purpose of checking integrity constraints in a mobile environment. Four caching strategies have been proposed, namely: Blind Strategy (BS), Quantifier Strategy (QS), Strict Strategy (SS), and Relax Strategy (RS) which are embedded in the proposed framework. The BS strategy blindly caches data items into mobile host while the QS strategy caches data items based on the quantifier of the integrity test. The SS and RS strategies analyze the relationships
between integrity tests in identifying the data items to be cached. These four strategies adopted the simplified form of integrity tests, which are sufficient and complete tests. The RS and SS strategies improve the checking mechanism by not only preventing delays during the process of checking constraints and performing the update but also reducing the amount of data items to be cached. The result shows that both the strategies managed to cache small amount of data items and at the same time achieved nearly 100% of hit ratio.
Abstrak tesis yang dikemukakan kepada senat Universiti Putra Malaysia sebagai memenuhi keperluan untuk ijazah Master of Sains

RANGKA KERJA DAN STRATEGI MEMPARA DATA UNTUK SEMAKAN KEKANGAN INTEGRITI DALAM SISTEM PANGKALAN DATA BERGERAK

Oleh

ZARINA DZOLKHIFLI

Julai 2012

Pengerusi : Profesor Madya Hamidah Ibrahim, PhD
Fakulti : Sains Komputer dan Teknologi Maklumat

Dalam persekitaran data bergerak, disebabkan pelbagai kekangan diwarisi daripada keterbatasan komunikasi tanpa wayar dan peranti bergerak, semakan kekangan integriti bagi memelihara keadaan konsisten pangkalan data bergerak adalah isu penting yang perlu dititik beratkan. Disebabkan keupayaan storan yang terbatas, hos bergerak tidak berupaya untuk menyimpan kesemua item data di dalam rangkaian, maka ia mesti berkongsi beberapa item data dengan suatu pangkalan data di dalam rangkaian tetap. Teknik mempara (caching) data digunakan untuk para (cache) data yang kerap dicapai daripada stesen pangkalan ke dalam hos bergerak. Dengan mempara item data yang diperlukan, ia membenarkan hos bergerak meneruskan pemprosessan tanpa khutair tentang pemutusan talian. Matlamat utama penyelidikan ini adalah untuk mencadangkan satu rangka kerja para data bagi tujuan menyemak kekangan integriti di dalam persekitaran bergerak. Empat strategi para data telah dicadangkan, iaitu: Buta Strategi (BS), Pengkuantiti Strategi (QS), Tegas Strategi (SS), dan Santai Strategi (RS) yang dibenam ke dalam rangka kerja yang dicadangkan. Strategi BS para data secara buta-tuli
ke dalam hos bergerak dan strategi QS *cache* item data berdasarkan pengkuantiti ujian integriti. Strategi SS dan RS menganalisa perhubungan antara ujian integriti dalam mengenal pasti item data untuk di para. Keempat-empat strategi ini mengadaptasi bentuk mudah ujian integriti iaitu ujian kecukupan dan lengkap. Strategi RS dan SS meningkatkan mekanisma semakan bukan hanya dengan mengelak kelewatan semasa proses menyemak kekangan dan melaksanakan pengemaskinian tetapi juga mengurangkan jumlah item data untuk di para. Hasil keputusan menunjukkan bahawa kedua-dua strategi berupaya untuk para jumlah item data yang kecil dan pada masa yang sama mencapai hampir 100% kadar nisbah ketukan.
ACKNOWLEDGEMENTS

ALHAMDULILLAH, Praise to ALLAH S. W. T. who has granted me the strength, courage, patience and inspirations to complete this work.

I express my deepest gratitude to my supervisor Associate Professor Dr. Hamidah Ibrahim, for her support and encouragement and for helping to bring it all to an end. Always having time for me and readily providing her technical expertise throughout the period of my study. This thesis would not have been possible without her support and guidance. To my thesis committee member, Dr. Lilly Suriani Affendey, I would like to express my appreciation for her insightful comments, questions, criticisms, and suggestions on the work.

I am grateful to my parents, Mama and Abah for all their love, patience and sacrifices. Their constant words of wisdom and encouragement have kept me motivated. Also to my in-laws, Ibu and Ayah for their support and prayers. My lovely brothers and sisters, not forgetting my true friends, I thank them for their faith and support in all my endeavors. My special thanks to my dear Abang and my son, who always support me, all the sacrifices, giving positive feedbacks and encouragement as well as motivated me to successfully complete my master program. Thank you so much.

Zarina Dzolkhifli
July 2012
I certify that a Thesis Examination Committee has met on 9/7/2012 to conduct the final examination of Zarina binti Dzolkhifli on her thesis entitled "Data Caching Framework and Strategies for Integrity Constraint Checking in Mobile Database System" in accordance with the Universities and University Colleges Act 1971 and the Constitution of the Universiti Putra Malaysia [P.U.(A) 106] 15 March 1998. The Committee recommends that the student be awarded the Master of Science.

Members of the Thesis Examination Committee were as follows:

**Md. Nasir Sulaiman, PhD**  
Associate Professor  
Faculty of Computer Science and Information Technology  
Universiti Putra Malaysia  
(Chairman)

**Nur Izura Udziir, PhD**  
Associate Professor  
Faculty of Computer Science and Information Technology  
Universiti Putra Malaysia  
(Internal Examiner)

**Fatinah Sidi, PhD**  
Senior Lecturer  
Faculty of Computer Science and Information Technology  
Universiti Putra Malaysia  
(Internal Examiner)

**Naomie Salim, PhD**  
Professor  
Faculty of Computer Science and Information Systems  
Universiti Teknologi Malaysia  
Malaysia  
(External Examiner)
