and  
Professor, Dr Mohmad Jafar Modabernia*

Abstract of thesis presented to the Senate of Universiti Putra Malaysia in fulfilment of the requirements for the degree of Doctor of Philosophy

**DEVELOPMENT OF ANXIETY AND DEPRESSION INVENTORY  
FOR SECONDRY SCHOOL STUDENTS IN IRAN**

By

**MAHNAZ FALLAHI KHESHT MASJEDI**

**October 2012**

**Chairman : Zoharah Binti Omar, PhD**

**Faculty : Educational Studies**

The purpose of the study was: (1) To determine the validity of A&D Inventory to measure anxiety and depression in secondary schools; (2) To determine the reliability of A&D Inventory in measuring anxiety and depression in secondary schools. The participants constituted of 579 students from the secondary school, whom were selected from teenagers who live in north of Iran in 2011-2012. Item pool generation was guided by the operational definition of the construct measured by the two theories: First, the Tripartite Model, and the second theory is the cognitive content specificity.

The instrument has been devised and validated through a scientific method to ensure its reliability and validity. The results provide evidence that the developed instrument achieved sound psychometric properties. The overall reliability value of Cranach's

Alpha was .87. Also by Using EFA, the Anxiety & Depression inventory (A&D inventory) construct produced two significant factors. The hypothesized two-factor model identified via EFA in the Study consisted of 32 items, with 16 items belonging to anxiety and 16 items to depression.

The CFA results showed that the goodness-of-fit indices for the revised model were as follows:  $\chi^2 = 2111.222$ ,  $DF = 403$ ,  $CMIN/DF = 3.785$ ,  $GFI = .920$ ,  $CFI = .937$ ,  $NFI = .912$ ,  $TLI = .908$  and  $RMSEA = .047$ ; each of the indices was the threshold values.

To assess the convergent, construct reliability (CR), average variance extracted (AVE) method and discriminant validity were obtained. The construct reliability of all latent variables in this study was 0.95 in anxiety and 0.97 in depression. The average variance extracted values of latent variables in this table were between 0.78 in anxiety and 0.81 in depression and the last, AVE was greater than the squared correlation that demonstrated satisfactory discriminant validity.

Evidence for the convergent validity of the A&D Inventory demonstrated through its significant high correlation between anxiety items of A&D Inventory with BAI items were .80 and high correlation depression items of the A&D Inventory with BDI (.89).

Divergent validity of the A&D Inventory was demonstrated through its significant low correlation anxiety items of the A&D Inventory with BDI (.45) and low correlation depression items of the A&D Inventory with the BAI (.41).

The overall test-retest reliability value of Cronbach's Alpha was .90.

The A&D Inventory is simple, brief, and easy to administer. Indeed, the entire 32-item A&D Inventory takes no longer to complete than other symptom measures. Overall,

therefore, the A&D Inventory can provide differentiated symptoms between anxiety and depression in a very quick and efficient manner for Iranian secondary schools.

The measurement invariance of the Model across samples was done to test the factorial validity of the instrument. There is no significant difference between male and female in this study. The results of this study suggest that the items do not measure differences between male and female respondents. Overall, therefore, the A&D Inventory can provide differentiated symptom assessment in a very quick and efficient manner for Iranian secondary schools.

Abstrak tesis yang dikemukakan kepada Senat Universiti Putra Malaysia sebagai memenuhi keperluan untuk ijazah Doktor Falsafah

**PEMBANGUNAN INVENTORI KEBIMBANGAN DAN INVENTORI  
KEMURUNGAN UNTUK PELAJAR SEKOLAH MENENGAH DI IRAN**

Oleh

**MAHNAZ FALLAHI KHESHT MASJEDI**

**Oktober 2012**

**Pengerusi : Zoharah Binti Omar , PhD**

**Fakulti : Fakulti Pengajian Pendidikan**

Tujuan kajian ini adalah untuk: (1) menentukan kesahihan daftar barangan A&D bagi mengukur tahap kebimbangan dan kemurungan di kalangan remaja; (2) menentukan kebolehpercayaan daftar barangan A&D bagi mengukur tahap kebimbangan dan kemurungan di peringkat sekolah menengah. Subjek bagi kajian ini adalah seramai 579 pelajar dari sekolah menengah dan mereka dipilih dari kalangan remaja yang tinggal di utara Iran pada tahun 2011-2012. *Item pool generation* telah dijadikan panduan berdasarkan definasi operasi yang diukur menggunakan dua teori berkaitan: Model Tripartite dan teori kandungan ketepatan kognitif.

Alatan yang digunakan untuk kajian ini telah dicipta dan disahkan melalui kaedah saintifik untuk memastikan kesahihan dan keboleh-percayaannya. Hasilnya, alat yang dicipta telah mencapai ciri-ciri psikometrik yang sesuai. Nilai keseluruhan tahap keboleh

percayaan Alpha Cranach mencatatkan .87. Malahan, dengan menggunakan EFA, daftar barangan Kebimbangan dan Kemurungan (A&D inventory) menghasilkan dua faktor yang signifikan. Hipotesis dua-faktor model yang dikenal pasti melalui EFA mempunyai 32 item, dengan 16 item mewakili kebimbangan dan 16 item lagi mewakili kemurungan.

Keputusan CFA menunjukkan bahawa indeks kebaikan-patut bagi model yang telah dikaji semula adalah seperti berikut:  $\chi^2 = 2111.222$ ,  $DF=403$ ,  $CMIN/DF= 3.785$ ,  $GFI=.920$ ,  $CFI=.937$ ,  $NFI=.912$ ,  $TLI=.908$  and  $RMSEA =.047$ ; di mana setiap satu indeks adalah ambang nilai.

Bagi menguji pertembungan pembentukan kebolehpercayaan (CR), kaedah cabutan purata berlawanan (AVE) dan kesahihan pembezaan telah diperolehi. Pembentukan kebolehpercayaan (CR) bagi semua pemboleh ubah tersembunyi dalam kajian ini adalah 0.95 bagi kebimbangan dan 0.97 bagi kemurungan. Nilai AVE bagi pemboleh ubah tersembunyi di dalam jadual ini adalah di antara 0.78 bagi kebimbangan dan 0.81 bagi kemurungan. Pada dasarnya, AVE sepatutnya lebih besar nilainya berbanding dengan korelasi kuasa dua bagi menunjukkan kesahihan pembezaan yang memuaskan. Nilai AVE adalah 0.5 lebih besar berbanding dengan 0.5 penentuan pertembungan yang mencukupi.

Bukti bagi kesahihan pertembungan untuk daftar barangan A & D telah ditunjukkan melalui hubung kait yang tinggi antara perkara kebimbangan daripada daftar barangan A & D dengan perkara BAI adalah sebanyak 0.80 dan hubung kait yang tinggi juga bagi perkara kemurungan daripada daftar barangan A & D BDI sebanyak (.89).

Selain daripada itu, bukti bagi kesahihan pembezaan daripada daftar barangan A & D telah ditunjukkan melalui hubungan kaitnya yang rendah terhadap perkara kebimbangan daripada daftar barangan A & D dengan catatan BDI (.45) dan hubungan kait yang sedikit terhadap perkara kemurungan daripada daftar barangan A & D BAI dengan catatan hanya (41).

Ujian dan ujian semula kebolehan percayaan yang telah digunakan dalam selang masa 2 minggu melaporkan bahawa  $r = .703$  bagi kebimbangan,  $r = .841$  bagi kemurungan dan  $r = .725$  bagi keseluruhan perkara. Secara amnya, keputusan yang diperolehi telah mempamerkan tahap kebolehan percayaan yang sederhana.

Daftar barangan A & D adalah suatu alat yang mudah, ringkas dan senang untuk diuruskan. Malah, kesemua 32 perkara daftar barangan A & D mengambil masa yang singkat untuk digunakan berbanding alat-alat pengukur yang lain. Secara keseluruhannya, daftar barangan A & D boleh memberi perbezaan gejala antara kebimbangan dan kemurungan dalam suatu cara yang cekap dan pantas bagi remaja di Iran.

## ACKNOWLEDGEMENTS

In the name of God Almighty, my full praise is directed towards Him for providing me faith to complete my studies. I wish also to express my sincere gratitude and appreciation to the people who have directly and indirectly contributed to this thesis.

I would like to take the time to acknowledge not only those who have aided me in this thesis, but all those who have influenced me through my educational journey. I am forever grateful to my advisor, Dr Zoharah Binti Omar. Words cannot express my gratitude for the guidance and opportunities that she has provided me. Without all her patience, kindness, academic expertise, and of course her scientific guidance, none of this would have been possible. This project could not have been completed without the help of the other members of the committee, Associate Professor Samsilah Binti Roslan and Dr Rosnaini Binti Mahmud, to whom I am indebted for their valuable contributions and suggestions.

I would also like to express my gratitude to my first lecturer in clinical psychology, Associate Professor Mohmad Jafar Modabernia for his guidance, kindness and academic expertise; I am very grateful and hope to have the opportunity to work with him again.

The preparation of this thesis has also been helped much by the assistance of various experts, including Prof. Mousa Kafi and Prof. Maryam Kousha for their help in developing the questionnaire.

I am extraordinarily grateful to my best friends in Malaysia, Dear Dr Maryam Jalili ,Basma Alarimi, Maryam Khadem, Ali Baghdadi, Gisia Daniali , and Morvarid Akhavan for their support and encouragement.

I would especially like to thank Dr Abbas Namjoo for his friendship, kindness and guidance. He has been and continues to be a dear friend.

I also want to acknowledge my dear Shahin Khalili , Fatemeh Eslam Doost ,Mastaneh Sharif, Azim Ebadi, Amir Kameli. and Shahin Bafteh-chi for their help in the data collection for the Pilot study, and I would also like particularly to acknowledge the contribution of my dear friends and coworkers in Guilan University of Medical Science for helping me with the data collection for the main study.

Special thanks are also due to all the students who participated in this study.

Finally, I would like to thank from the bottom of my heart from my sisters and my brother for their understanding, care, everlasting love and patience. My family has always been there for me and I was privileged to receive their kind, loving upbringing.

My beloved sisters, Behnaz and Mehrnaz; my brother Hassan, thanks for being supportive and caring. I thank you from the bottom of my heart for making a difficult journey less difficult; for bringing a light when the lamps went out; for laughter at times of lonely silence: for all these reasons, and for teaching me that important lesson never to set limits for myself, may you all be blessed.

I certify that a Thesis Examination Committee has met on 30/10/2012 to conduct the final examination of Mahnaz Fallahi Khesht Masjedi on her thesis entitled "**Development of anxiety inventory and depression inventory for secondary school students in Iran**" in accordance with the Universities and University Colleges Act 1971 and the Constitution of the Universiti Putra Malaysia [P.U. (A) 106] 15 March 1998. The Committee recommends that the student be awarded the Doctor of Philosophy.

Members of the Thesis Examination Committee were as follows:

**Bahaman Abu Samah, PhD**

Associate Professor  
Institute for Social Science Studies  
Universiti Putra Malaysia  
(Chairman)

**Aminah bte Ahmad, PhD**

Professor  
Faculty Education Studies  
Universiti Putra Malaysia  
(Internal Examiner)

**Sidek bin Mohd Noah, PhD**

Associate Professor  
Faculty Education Studies  
Universiti Putra Malaysia  
(Internal Examiner)

**Catherine Salmon, PhD**

Associate Professor  
Department Chair in University of Redlands  
University of Redlands in USA  
(External Examiner)
