Keywords: Entrepreneurial characteristics, Living Skills, teacher education programme

ABSTRACT
Entrepreneurial efforts in the form of small, new businesses have become an important force in the economic growth of a nation. Living Skills subject (KHB) with an entrepreneurship component was introduced in the Malaysian school curriculum since 1988, but a question arise whether the teachers themselves possess the entrepreneurial characteristics needed. A survey was conducted to investigate the levels of the perceived entrepreneurial characteristics of the Integrated Living Skills teachers (KHB) in Malaysian secondary schools. Findings indicated that a majority of the teachers participated in the study had a moderate level of perceived entrepreneurial characteristics. Male teachers were more entrepreneurial compared to female teachers. The entrepreneurial characteristics of teachers with different teaching responsibility did not differ. Teachers who aspired for entrepreneurship were more entrepreneurial than the teachers who did not have such an aspiration. It is believed that all KHB teachers should possess the entrepreneurship characteristics and it can be developed through in-service training. It is suggested that all teacher education programme should have a 3 credit course in entrepreneurship education.

INTRODUCTION
The growing interest of entrepreneurship, especially on the part of the government, is prompted in part by the assumptions that much of the economy’s ability to innovate, diversify, and create new jobs comes from the small business sectors (Shapero 1985). Small businesses are presumed to be a major driving force behind the job creation as well as sustaining the economic development of a country. In fact, entrepreneurial efforts in the form of small, new businesses have become an important force...
in the economic growth of a nation (Oslo 
1985). Birch (1990) stated that during the 
1980s the Fortune 500 firms in the US eliminated 
4 million workers, but during the same period 
the total U.S. employment expanded by more 
than 20 million. Majority of them were employed 
by small business companies. The entrepreneurial 
sector as posited by Birley (1989) is viewed as a 
significant factor in designing the strategies for 
the recovery and economic growth of many nations.

Entrepreneurship itself has been diversely 
defined by many people. Entrepreneurship as 
defined by Gunderson (1990) is the 
enhancement of skills to serve the consumers. 
It has been defined by Kuratko and Hodgetts 
(1992) as a process of innovation and venture 
creation. Entrepreneurship is also defined as a 
process of creating something different with 
value (Hisrich and Peter 1995).

Who are the entrepreneurs? According to 
Burch (1986), typically an entrepreneur is seen 
as someone who owns and operates small 
businesses. However, he argued that simply to 
own or operate a small business does not make 
someone an entrepreneur. It is more than 
owning and operating a small business. 
Entrepreneurs are the initiators of economic 
growth. They are the self-starters and doers. 
Kuehl and Lambing (1990) regarded the 
entrepreneur as a person who takes initiative for 
a business project, organizes the resources it 
requires, and assumes the risks it entails. An 
entrepreneur is someone with a unique idea 
beyond the imagination of others. He or she is 
someone who always goes against the odds 
because he or she can see the future of his or 
her venture. As such, Oslo (1985) defined the 
entrepreneur as a future-oriented, risk-taking 
person who engages in the identification and 
development of new ideas. In the field of 
education, we may defined a teacher who is 
entrepreneurial as a teacher who is innovative, 
creative, and futuristic. Those teachers have 
ideas on how to make teaching and learning 
appealing to students.

Studies have unearthed different 
characteristics of successful entrepreneurs. For 
example, Moorman and Haloran (1996) 
postulated that in order to be successful, an 
entrepreneur should have the confidence, 
determination, perseverance, creativity, and need 
for achievement. Hisrich and Peters (1995), on 
the other hand perceived that an entrepreneur 
should have three basic skills which include 
technical skills, business management skills, and 
personal entrepreneurial skills.

STATEMENT OF THE RESEARCH PROBLEM

Studies on the entrepreneurial characteristics of 
students are numerous (e.g. Kourilsky 1990; 
Solomon and Fernald 1990; and Hatten and 
Ruthland 1995). Their findings showed that 
entrepreneurial characteristics are inherent 
among students. However, the writers are not 
able to find a research investigating the 
entrepreneurial characteristics of vocational and 
technical teachers. Lachman (1980) believed that 
if a person has the same characteristics as 
entrepreneurs he or she will have a higher 
tendency to perform entrepreneurial acts than 
people who do not possess such characteristics.

Entrepreneurs can be developed if given 
proper training and exposure. Meyers (1992) 
suggested that if students are to be prepared to 
be entrepreneurs, they should be provided with 
experiences to assist them in the development of 
entrepreneurial skills. In Malaysia, various 
government agencies, such as the Ministry of 
Entrepreneurs Development, Ministry of 
Education, Ministry of Youth and Sports have 
undertaken steps to create entrepreneurs. 
However, in order to provide a good 
entrepreneurial training, it is very proper for 
the trainer in this case, the school teachers to be 
entrepreneurial. But, a question arises as to 
whether or not the school teachers, especially 
the integrated living skill (KHB) teachers possess 
the entrepreneurial characteristics. Thus, a study 
was conducted to ascertain the entrepreneurial 
characteristic of the KHB teachers.

OBJECTIVE OF THE STUDY

The primary purpose of the study was to assess 
the perceived entrepreneurial characteristics of 
the KHB teachers. More specifically, the study 
attempted to answer the following research 
questions:

- What are the levels of perceived 
entrepreneurial characteristics of the KHB 
teachers?
- Do the perceived entrepreneurial 
characteristics of teachers who primarily 
teach KHB subject differ than teachers who 
did not primarily teach KHB subject?
Entrepreneurial Characteristics of Malaysian Living Skill Teachers

- Do the perceived entrepreneurial characteristics of male and female teachers differ significantly?
- Do the perceived entrepreneurial characteristics of teachers with different specialization during teacher training differ significantly?
- Do the perceived entrepreneurial characteristics of teachers who aspire to be entrepreneurs differ significantly from those who do not aspire to be entrepreneurs?
- Do the perceived entrepreneurial characteristics differ significantly among teachers of different races?

METHODOLOGY

The study employed a descriptive correlational research method. The independent variables were selected demographic variables which include gender, training specialization, race and aspiration. The dependent variable was the perceived entrepreneurial characteristics.

Population and Sample

The target population was all integrated living skill teachers in Malaysia. The sample consisted of 153 KHB teachers from the selected academic schools in Malaysia. A multi-stage random sampling procedure was employed to obtain the sample. Four states were randomly selected. From each of the four selected states, two school districts were randomly selected. From the selected school district, a random selection of secondary schools was done. All KHB teachers from the selected schools formed the sample of the study.

Instrumentation

The research instrument was developed by the researchers. It consists of the section about demographic variables and the section containing statements describing the entrepreneurial characteristics. The section on the entrepreneurial characteristics was developed based on the literature about entrepreneurship. Originally, the research instrument contained 84 statements/items that describe the entrepreneurial characteristics. The perceived entrepreneurial characteristics were measured using 5 point Likert scale (5= strongly agree, 4=agree, 3=moderately agree, 2=disagree, and 1=strongly disagree). However, based on the pilot-test results, the statement/items in the research instrument were reduced to 42 statements on entrepreneurial characteristics (Table 5). The elimination of the statements was done based on the reliability test results. The statements were removed from the questionnaire on two basis: (1) negative total item correlation and (2) close to zero correlation. The estimated reliability coefficient of the final research instrument containing 42 items was 0.93.

RESULTS

One hundred and fifty-three Integrated Living Skills (KHB) teachers were involved in the study. About 61% of them were female teachers and 39% were male teachers. A majority of them were Malay teachers (Table 1). Their ages were between 21 and 54 years old with a mean of 34.6 years old. On the average the KHB teachers have been in the teaching profession for almost 12 years. They have taught the KHB subjects for about 6.5 years. Most of them (81%) were educated at the Teacher Training Colleges. They were trained in home science, agricultural science, industrial arts, integrated living skills, and commerce (Table 2). Even though their training specializations differed, most of them taught the KHB subject in school (Table 3).

The first research question was designed to ascertain the perceived entrepreneurial

characteristics of the KHB teachers. As shown in Table 5, the respondents reacted favorably to the statements describing their entrepreneurial characteristics (M=3.98, SD. =.31). The respondents' perceptions of their entrepreneurial characteristics were divided into three categories (Table 4). The total score of the perceived entrepreneurial characteristics which was the accumulated scores of all 42 items was used as the basis to classify the levels of perceived entrepreneurial characteristics of the KHB teachers. The total scores of the perceived entrepreneurial characteristics of the KHB teachers were between 106 and 203 with a mean of 164.14 and a standard deviation of 13.99. Although the KHB teachers reacted favorably to the statements of their entrepreneurial characteristics, a majority of them possess a medium level of entrepreneurial characteristics.

Another objective of the study was to ascertain if the perceived entrepreneurial characteristics differ among the male and female KHB teachers. The study showed that the perceived entrepreneurial characteristics were more prominent among male teachers than female teachers (M= 168.33 and M=161.23 respectively, t = 3.01, p = .003). The entrepreneurial characteristics were also more prominent among teachers who aspired to be entrepreneurs than teachers who did not aspire to be entrepreneurs (M = 165.05 and M = 156.78 respectively; t = 2.09, p = .019). On the other hand, the study showed that the perceived entrepreneurial characteristics did not differ among teachers of different ethnic groups (t= .72, p = .48), among teachers with different specializations (F(5.118) = 1.06, p = .38), and among teachers with different teaching emphasis in schools (t= .33, p >.05), as illustrated in Table 6.

DISCUSSION
Possessing the entrepreneurial characteristics will benefit teachers even if they themselves are not entrepreneurs. Teaching is a very complex process requiring a teacher to possess all the necessary qualities of an effective teacher. Miller (1983) contended that teachers are the most important element in vocational education. The values, skills, professional knowledge, experience, and human relation skills that a teacher possesses will determine the quality of the entrepreneurial learning opportunities available to students.

Teachers have to be entrepreneurial because they will determine the success of education. Their innovativeness and creativity in their teaching approaches will enhance not only the teaching process, but the learning process as well. They have to make the correct decisions with regard to the teaching strategies to be used with which different of students. They have to constantly look for opportunities to improve and update their knowledge and skills to be able to provide a good entrepreneurship education to students. Enterprise development and enterprise education is not so much on the development of individual businesses, but the process of developing the entrepreneur and people who may work in the businesses (Rosa 1992).

Regardless of the differences in demographic characteristics, teachers should be entrepreneurial in order to be successful in their profession. However, the present study shows the entrepreneurial characteristics differ among teachers of different gender and entrepreneurial aspirations. The study showed that the entrepreneurial characteristics did not differ among teachers with different training specializations and the subject primarily taught by the KHB teachers. The study also shows that majority of the teachers possess a medium level of the perceived entrepreneurial characteristics. We believe that every teacher who teaches the integrated living skills subject should have a high level of entrepreneurial characteristics in order to train students to be educated entrepreneurs. Scott (1988) believed that long term supply of well educated and well qualified entrepreneurs is essential to the strong modern economy. Hynes (1996) believed that it is necessary to encourage and foster enterprise at an earlier age and this can be effectively actioned through the promotion of enterprise through education. The KHB teachers should possess all the characteristics associated with the successful entrepreneurs. Based on the findings of the study, the training programs should emphasize on developing teachers to be innovative, be able to take risk, be self-confident, be able to look for opportunities, and efficiency. However, other characteristics should be developed as well if we are to have teachers who are entrepreneurial.

CONCLUSION
The following conclusions based on the findings of the study were:
- Majority of the teachers participated in the study had a medium level of perceived entrepreneurial characteristics.
- Male KHB teachers were more entrepreneurial compared to female KHB teachers.
- KHB teachers who aspired to be entrepreneurs perceived themselves to be more entrepreneurial than the KHB teachers who did not aspire to be entrepreneurs.
- There was no significant difference of perceived entrepreneurial characteristics among teachers who had different training specializations.
- There was no significant difference of perceived entrepreneurial characteristics among teachers who had different teaching responsibilities.

RECOMMENDATION
The entrepreneurship education will result in the birth of new generation of entrepreneurs who will spur the economic growth of a nation. As noted by Singh (1990) entrepreneurship education can be used as a means of safeguarding the economic sovereignty of the Third World countries. Therefore, students should be trained to gradually adopt the spirit of being entrepreneurs. They should be provided the experiences through various activities in order for them to develop the entrepreneurial spirit and characteristics needed for the success in their chosen profession. The educators of the future workforce (entrepreneurs or non-entrepreneurs) must be entrepreneurial.

The educational system is one of the several environmental influences which may help form entrepreneurs who will make such contribution. Hence, schools should serve as a training ground for entrepreneurial skills development where
future entrepreneurs could adopt a positive attitude while anticipating changing needs and prepare them optimally by coupling themselves and their skills to the needs of the ever-changing environment (Leo-Paul Dana 1993). Leo suggested that entrepreneurship education should have a greater emphasis on practical experience. More activities (eg. selling of souvenirs, hari raya cards) should be planned and implemented through clubs and societies in schools. The entrepreneurial activities conducted through societies and clubs will encourage students to be entrepreneurial regardless of the type of professions they will enter. The country needs a pool of entrepreneurial workforce in order to be competitive.

With regard to teacher preparation, we would like to suggest that a general 3 credit hour course on entrepreneurship education to be included in the curriculum of teacher education. Each prospective teacher needs to be exposed to entrepreneurship regardless of their teaching specializations. Prospective teachers have to acquire the knowledge about and skill of entrepreneurship simply because by being entrepreneurial the teachers can make teaching and learning more effective. As for prospective technical and vocational education students who do not major or minor in entrepreneurship or business education, a different structure of an entrepreneurship education must be made compulsory to them. The course should have both theoretical as well as practical components. In other words, prospective teachers of technical and vocational education will have to undergo a laboratory training in entrepreneurship. Hatten and Ruthand (1995) believed that nurturing potential entrepreneur through the educational process could produce more entrepreneurs. In the case of teacher preparation, it implies that prospective teachers will be able to acquire the entrepreneurship skills that may make their teaching more successful. Some of the entrepreneurial skills that may relate well with the teaching professions are initiative, creative thinking, organizing, innovativeness and many more. It is believed (Lachman 1980) that a person who has the same characteristics as entrepreneurs will have a higher tendency to perform entrepreneurial acts than people who do not possess such characteristics.
