

Development of a bacterial-based tetrazolium dye (MTT) assay for monitoring of heavy metals

Abstract

An inhibitive assay for metals using a bacterial respiratory assay system is presented. The assay is based on the ability of bacteria to reduce the water soluble tetrazolium dye (MTT). The isolate was tentatively identified as *Bacillus* sp. strain Khayat. The *Bacillus* sp based MTT assay is sensitive towards Hg²⁺, Cu²⁺, Ag²⁺, Cd²⁺ and Zn²⁺ with concentration of toxicant giving 50% inhibition (IC₅₀) values at 0.046, 0.057, 0.044, 0.857 and 1.716 mg/L, respectively. A Limit of Detection (LOD) value was 0.001 mg/L for Hg²⁺ and Cu²⁺ while 0.003, 0.067 and 0.201 mg/L, respectively for Ag²⁺, Cd²⁺ and Zn²⁺. This assay is xenobiotics and pesticide tolerance and can be completed within 20 min. Field test on identify polluted water sample from Bukit Tinggi Industrial Estate, Penang and Bukit Tinggi Industrial Estate, Penang proved that *Bacillus* sp-based MTT assay was sensitive in toxic response.
