Chair : Chan Yoke Mun, PhD

Faculty: Medicine and Health Sciences

Cardiovascular disease (CVD) is the leading cause of death in patients with type 2 diabetes mellitus (T2DM). Although patients with T2DM and CVD share common risk factors, the link between these diseases remains largely unexplained. Thus, this study aims to identify the determinants of CVD in T2DM patients. This study involved 313 patients aged 30 to 78 diagnosed with T2DM at two Malaysian government hospitals. Systematic random sampling method was applied in patient selection. Socio-demographic data was assessed using a pre-tested interviewer-administered structured questionnaire. Anthropometric measurements were performed according to standard procedures. Clinical and laboratory characteristics on cardiovascular risk factors [medical history, treatments, blood pressure, fasting plasma glucose, glycated haemoglobin (HbA1c), and lipid profile] were collected from patients' medical records, clinical examination and face-to-face interview. Dietary assessment (by means of a 24 h dietary recall), physical activity level [via
International Physical Activity Questionnaire (IPAQ), smoking and alcohol consumption habits were ascertained.

A positive response rate of 100% was achieved. The mean age of study subjects was 55.7±9.2 years, with a mean duration of diabetes of 10.1±8.1 years; 52.1% subjects were females; and majority were Malays (47.0%). Approximately one third (36.1%, n=113) of the subjects were suffering from CVD. High prevalence of established coronary artery disease (30.7%), cerebrovascular disease (10.2%) and peripheral vascular disease (5.1%) were identified. There are significant relationships between CVD and non-CVD patients in the age, DM duration, gender, ethnicity, education, employment, personal and household monthly income, WHR, HDL-C level, triglycerides, hypertension, dyslipidaemia, nutrient intakes (calories, carbohydrate, protein, and total fat), physical activity level, smoking status and alcohol consumption as indicated by bivariate analysis ($p<0.05$).

Binary logistic regression using forward stepwise method showed age ($B=0.056$, adjusted $OR_{95\%\, CI} = 1.058\, [1.018-1.099];\ p=0.004$), lower HDL-C level ($B=-1.466$, adjusted $OR_{95\%\, CI} = 0.231\, [0.087-0.613];\ p=0.003$), working status of self-employed ($B=1.381$, adjusted $OR_{95\%\, CI} = 3.978\, [1.626-9.733];\ p=0.002$), high ($B=-1.114$, adjusted $OR_{95\%\, CI} = 0.328\, [0.172-0.626];\ p=0.001$) compared to low physical activity level were significantly associated with higher CVD risk, upon adjustment for potential covariates.

In conclusion, increased age, lower HDL-C, low physical activity level, and working status appeared to be related with CVD among the T2DM patients studied. Therefore,
the importance of secondary and tertiary preventions to minimise the potential deterioration of metabolic control and quality of life accompanied CVD coexisted T2DM should be highly emphasized.
Abstrak tesis yang dikemukakan kepada Senat Universiti Putra Malaysia sebagai memenuhi keperluan untuk ijazah Master Sains

FAKTOR BERKAITAN DENGAN PENYAKIT KARDIOVASKULAR DALAM KALANGAN PESAKIT DENGAN DIABETES MELLITUS JENIS 2

Oleh
TAN MUN CHIENG

Februari 2013

Pengerusi : Chan Yoke Mun, PhD
Fakulti : Perubatan dan Sains Kesihatan

Penyakit kardiovaskular (CVD) ialah punca utama kematian dalam kalangan pesakit dengan diabetes mellitus jenis 2 (T2DM). Walaupun pesakit T2DM dan CVD berkongsi faktor risiko yang sama, hubungan antara penyakit ini sebahagian besarnya masih tidak dapat dijelaskan. Oleh itu, kajian ini bertujuan untuk mengenalpasti penentu CVD dalam kalangan pesakit T2DM. Penyelidikan ini melibatkan 313 orang pesakit yang berumur 30-78 tahun yang didiagnosis menghidap T2DM di dua buah hospital kerajaan Malaysia. Kaedah persampelan rawak sistematik telah digunakan dalam pemilihan pesakit. Data sosio-demografi dikumpul melalui soal selidik berstruktur menemubual yang telah diuji. Ukuran antropometri telah dilaksanakan mengikut prosedur piawai. Ciri faktor risiko kardiovaskular klinikal dan makmal [sejarah perubatan, rawatan, tekanan darah, glukosa plasma, hemoglobin bergliserin (HbA\textsubscript{1C}), dan profil lipid] dikumpul dari rekod perubatan pesakit, pemeriksaan klinikal dan temubual bersemuka. Penilaian diet (melalui pengingatan diet 24 jam), tahap aktiviti fizikal [melalui Soal Selidik
Aktiviti Fizikal Antarabangsa (IPAQ)], tabiat merokok dan pengambilan alkohol ditentukan.

Kadar respons positif 100% telah dicapai. Purata umur subjek kajian adalah 55.7±9.2 tahun dengan purata tempoh diabetes 10.1±8.1 tahun; 52.1% subjek ialah perempuan; dan majoriti ialah orang Melayu (47.0%). Kira-kira satu pertiga (36.1%, n=113) subjek kajian telah menderita CVD. Prevalens penyakit arteri koronari (30.7%), penyakit serebrovaskular (10.2%) dan penyakit vaskular periferal (5.1%) yang tinggi telah dikenalpasti. Terdapat hubungan yang signifikan antara pesakit CVD dan bukan CVD dalam peningkatan umur, tempoh DM, jantina, etnik, tahap pendidikan, status pekerjaan, peribadi dan pendapatan isi rumah bulanan, WHR, tahap lipoprotein berdensiti tinggi (HDL-C), trigliserida, hypertensi, dyslipidaemia, pengambilan nutrien (kalori, karbohidrat, protein, dan lemak), tahap aktiviti fizikal, tabiat merokok dan pengambilan alkohol seperti yang ditunjukkan oleh analisis bivariat (p<0.05).

Regresi logistik binari menggunakan kaedah ke hadapan langkah demi langkah menunjukkan umur (B=0.056, OR_{95\% CI} terlaras=1.058 [1.018-1.099]; p=0.004), tahap HDL-C yang lebih rendah (B=-1.466, OR_{95\% CI} terlaras=0.231 [0.087-0.613]; p=0.003), status pekerjaan bekerja sendiri (B=1.381, OR_{95\% CI} terlaras=3.978 [1.626-9.733]; p=0.002), tahap aktiviti fizikal yang tinggi (B=-1.114, OR_{95\% CI} terlaras=0.328 [0.172-0.626]; p=0.001) berbanding dengan tahap aktiviti fizikal yang rendah berkaitan dengan risiko CVD yang lebih tinggi secara signifikan, selepas pelarasan untuk kovariat yang berpotensi.
Kesimpulannya, peningkatan umur yang tinggi, HDL-C yang rendah, tahap aktiviti fizikal rendah, dan status pekerjaan berkait rapat dengan CVD dalam kalangan pesakit T2DM yang dikaji. Oleh itu, kepentingan pencegahan sekunder dan tertier untuk mengurangkan potensi kemerosotan kawalan metabolik dan kualiti hidup disertai CVD wujud bersama T2DM harus dititikberatkan.
ACKNOWLEDGEMENTS

This thesis would not have been possible without the guidance and the help of all of them who in one way or another contributed and extended their valuable assistance in the preparation and completion of this study. It is a pleasure to convey my gratitude to them all in my humble acknowledgment.

I would firstly like to convey my deepest gratitude wholeheartedly to my main supervisor Dr. Chan Yoke Mun for her patient and hearty supervision of my thesis and help throughout my whole research study. I could always be mightily blessed with her thorough support while reaching the objectives of this work, despite the magnitude of encountered problems, having seen my ups and downs. Thank you Dr. Chan, I am very grateful to have you in the chapters of my life.

Next, I would like to express my utmost appreciation to my supervisory committee members and research investigators – Dr. Ng Ooi Chuan, Dr. Wong Teck Wee, Dr. Joseph Anthony, Assoc. Prof. Dr. Hejar Abdul Rahman, Prof. Dr. Mirnalini Kandiah, and Dr. Rushdan Abdul Aziz for the valuable assistance and advices. Thanks for their guidance and caring in this period of my study. In particular Dr. Ng, Dr. Wong, Dr. Joseph, and Assoc. Prof. Dr. Hejar, truly thanks for your friendship and warm helping hands, not only sharing your precious medical experiences but also making the effort to facilitate my thesis writing by providing me the wholesome supervision and information. Importantly, your financial supports as the backbone of this research are highly appreciated. Apart from academic assistance, I would sincerely like to address my thankfulness to you for the warmest concerns, love, hope, happiness, trust, and motivation along the journey of my master’s research
study. Thank you very much for believing in my ability, encouraging me and supporting me at the darkest point of my life.

It is a pleasure to pay tribute to UPM, SGS and Ministry of Higher Education (MOHE) for providing me the opportunity and scholarships in pursuing my studies here. I would also sincerely like to thank the Head of Department of Nutrition and Dietetics, Assoc. Prof. Dr. Norhaizan and all the lecturers that offered me valuable assistance and advices. Furthermore, many thanks go to the medical doctors and staff nurse in HKL and Hospital Serdang for their fruitful helps. There are just too many of you to be named here, but you know who you are, thank you for your kind helps.

My hearty thanks also go to Prof. Dr. Poh Bee Koon from UKM; Prof. Dr. Harri Sintonen from the University of Helsinki, Finland; Assoc. Prof. Dr. Loke Seng Cheong, a Senior Consultant Physician and Endocrinologist; and statisticians including Prof. Dr. Jegak, Prof. Dr. Bahaman, Dato Prof. Dr. Lye Munn Sann and Assoc. Prof. Dr. Karuthan Chinna for their care, assistance and guidance.

My most cordial thanks to my parents who have disciplined and nurtured me throughout the life to give me the strength and tools in achieving any goals I may set for myself. A special thanks to my dear grandparents and brothers who are constant reminders that there are people who still inspire my world. Thanks for their understanding, endless love and supports in making my research completion a success. I am nobody without any of you.

A very warm thank you also goes to my friends in particular Yong Kig Tsuew, an old good friend of mine for her motivation, cares, supports and helps during my long
tough journey of research study. Not forgotten my postgraduate friends as good companions that accompany me throughout these years: Nor Baizura, Heng Kiang Soon, Kayvi Ang, Wong Chee Yen, Asma’ Ali, Khoo Hock Eng, Arimi Fitri, Mdm. Zalina, Zalinda Zalbahar, Nurul Husna, Tiew Kee Fong, Chew Lye Yee, and Jason Yeo. Also, special thanks to my dear friends who lightened up my world in UPM: Tan Chew Sia, Eliza Wong, Lim Jia Qi, Evelyn Teh, Khor Wern Wey, Ooi Poh Hwa, Koh Yee Ching, Tan Huay Ying, Tee Hwei Eying and a few not listed here. I will always remember the moment we studied hard in university and learned together in hospitals. Especially Tan Chew Sia whose sincerity, encouragement, thoughtfulness, and simple pure friendship I will never ever forget. Thanks for being by my side with laughter, tears, love, care, comfort, and reminders to be positive always. I am extraordinarily fortunate in having you as my friend, feeling much more confident in my abilities with your inspiration. Sincere and deep thanks to all of you that helped this thesis to see the light at the end of the tunnel.

Finally, I would like to thank everybody who is important to the successful realisation of this thesis, as well as expressing my apology that I could not mention personally one by one. Thank you.
I certify that a Thesis Examination Committee has met on 21 February 2013 to conduct the final examination of Tan Mun Chieng on her thesis entitled "Factors associated with cardiovascular disease in patients with type 2 diabetes mellitus" in accordance with the Universities and University Colleges Act 1971 and the Constitution of the Universiti Putra Malaysia [P.U.(A) 106] 15 March 1998. The Committee recommends that the student be awarded the Master of Science.

Members of the Thesis Examination Committee were as follows:

Mary Huang Soo Lee, PhD
Associate Professor
Faculty of Medicine and Health Sciences
Universiti Putra Malaysia
(Chairman)

Zalilah Bt. Mohd. Shariff, PhD
Professor
Faculty of Medicine and Health Sciences
Universiti Putra Malaysia
(Internal Examiner)

Mohd. Nasir Mohd. Taib, PhD
Associate Professor
Faculty of Medicine and Health Sciences
Universiti Putra Malaysia
(Internal Examiner)

Zahara Abdul Manaf, PhD
Associate Professor
Faculty of Health Sciences
Universiti Kebangsaan Malaysia
(External Examiner)

SEOW HENG FONG, PhD
Professor and Deputy Dean
School of Graduate Studies
Universiti Putra Malaysia

Date:
This thesis was submitted to the Senate of Universiti Putra Malaysia and has been accepted as fulfilment for the degree of Master of Science. The members of the Supervisory Committee were as follows:

**Chan Yoke Mun, PhD**  
Senior Lecturer  
Faculty of Medicine and Health Sciences  
Universiti Putra Malaysia  
(Chairman)

**Ng Ooi Chuan, MBBS, MRCP**  
Senior Medical Lecturer  
Faculty of Medicine and Health Sciences  
Universiti Putra Malaysia  
(Member)

**Wong Teck Wee, MBBS, MRCP, FAMS**  
Consultant Interventional Cardiologist  
Heart and Lung Centre  
iHEAL Medical Centre  
(Member)

**Mirnalini Kandiah, PhD**  
Professor  
Faculty of Medicine and Health Sciences  
Universiti Putra Malaysia  
(Member)
