DEDICATION

This thesis is dedicated to all the members of my family, who supported and encouraged me, especially my mother.

Also, my deepest appreciation goes to my dear husband for his love and moral support and to my children Behnam and Peyman for their patience and understanding during the course of my study.

Abstract of thesis presented to the Senate of Universiti Putra Malaysia in fulfilment of the requirement for the degree of Doctor of Philosophy

EFFECTS OF COMMUNICATION AND CONFLICT RESOLUTION SKILLS TRAINING ON MARITAL SATISFACTION AND MENTAL HEALTH AMONG IRANIAN COUPLES

By

MAHIN ASKARI

February 2011

Chairman: Associate Professor Sidek b Mohd Noah, PhD

Faculty: Educational Studies

This study examined the effects of communication and conflict resolution skills training on marital satisfaction and mental health among Iranian couples based on the PREPARE/ENRICH program. In this study, there were two scales used to assess marital satisfaction and mental health: the ENRICH Marital Satisfaction Scale and the General Health Questionnaire (GHQ-28). The study adopted a pre- and post-control group design in emphasizing the effects of communication training and conflict resolution skills on marital satisfaction and mental health. The participants in this research consisted of couples who were referred to the researcher by counseling center. The referrals were done for about two months in 2009. Their problems were marital difficulty and marital conflict, commonly categorized as marital dissatisfaction, which were identified after formal interview, testing and screening process. In order to assign the experimental and control groups, purposive sampling with random assignment was employed. One hundred and eight participants

comprised of 54 married couples were divided equally between control and treatment groups and the training sessions lasted for eight weeks. In this training program, researchers focused on the dependent variables of marital satisfaction and mental health, while communication and conflict resolution skills training were the independent variables. Specifically, the t-test statistical analysis was employed to test for potential significant differences in couples' scores of marital satisfaction and mental health between (i) the pre- and post-training scores for couples of the experimental group; and (ii) between the post-training scores of couples of the two different groups. The results indicated that training on communication and conflict resolution skills had significant positive effects on the marital satisfaction and mental health scores of the studied couples. In addition, this training program was effective in enhancing the couples' communication skills and capabilities to resolve conflicts. On top of that, this program also affected their mental health sub-scales such as somatic symptoms, anxiety, social dysfunction, and depression. This study showed that the training investigated is relevant and useful for counseling procedures. The program presented can be regarded as an aid for family counselors in clinical and non-clinical therapy. Exclusively, the ENRICH psycho-educational program is efficient and well enough to be conducted systematically for Iranian couples. Hence, more marital counselors are recommended to be trained in applying the ENRICH program in their counseling practice.

**KESAN LATIHAN KOMUNIKASI DAN KEMAHIRAN PENYELESAIAN
KONFLIK TERHADAP KEPUASAN PERKAHWINAN DAN KESIHATAN
MENTAL DALAM KALANGAN PASANGAN IRAN**

Fakulti: Pengajian Pendidikan

Kajian ini menguji kesan latihan komunikasi dan kemahiran penyelesaian konflik terhadap kepuasan perkahwinan dan kesihatan mental di dalam kalangan pasangan Iran berdasarkan program PREPARE/ENRICH. Dalam kajian ini, terdapat dua alat ukuran yang digunakan untuk mengukur kepuasan perkahwinan dan kesihatan mental: Skala Kepuasan Perkahwinan ENRICH dan the *General Health Questionnaire* (GHQ-28). Rekabentuk kajian ini merupakan rekabentuk kajian eksperimen kumpulan rawak, ujian pra dan ujian pasca dengan menekankan kesan-kesan latihan komunikasi dan kemahiran penyelesaian konflik terhadap kepuasan perkahwinan dan kesihatan mental. Responden- responden kajian ini adalah terdiri daripada semua pasangan yang telah dirujuk kepada pengkaji melalui pusat-pusat kaunseling. Rujukan telah dibuat selama dua bulan pada tahun 2009. Antara masalah-masalah yang dirujuk adalah kesukaran yang timbul di dalam perkahwinan dan konflik perkahwinan yang dikategorikan sebagai ketidakpuasan dalam

perkahwinan di mana semua pasangan ini telah dikenalpasti melalui temubual formal, pengujian, dan proses penapisan. Teknik persampelan bertujuan dengan kaedah pembahagian rawak telah digunakan untuk membentuk kumpulan eksperimental dan kawalan. Kajian ini dilaksanakan ke atas seratus lapan orang responden di mana 54 pasangan suami isteri dibahagi sama rata di antara kumpulan eksperimen dan kawalan, dan sesi-sesi latihan berlangsung selama lapan minggu.

Di dalam program latihan ini, pengkaji telah memfokuskan ke atas pembolehubah bersandar iaitu kepuasan perkahwinan dan kesihatan mental, manakala latihan kemahiran komunikasi dan resolusi konflik bagi pembolehubah tak bersandar. Secara khususnya, analisis statistik ujian-t telah digunakan untuk menguji perbezaan yang signifikan bagi data kepuasan perkahwinan dan kesihatan mental di antara (i) ujian pra dan pasca dalam kumpulan eksperimental; dan (ii) antara ujian pasca bagi pasangan-pasangan dalam dua buah kumpulan yang berbeza. Dapatan-dapatan kajian menunjukkan latihan ke atas komunikasi dan kemahiran resolusi konflik mempunyai kesan signifikan yang positif ke atas kepuasan perkahwinan dan kesihatan mental pasangan suami-isteri. Tambahan, program latihan ini sangat berkesan dalam meningkatkan komunikasi dan kemahiran penyelesaian konflik di antara pasangan. Program ini juga telah memberi kesan yang positif ke atas sub-skala kesihatan mental pasangan seperti symptoms somatik, kebingungan, ketidakfungsian sosial, dan kemurungan. Kajian ini telah menunjukkan latihan yang dikaji adalah sangat relevan dan berguna untuk prosedur-prosedur kaunseling. Program yang ditunjukkan boleh digunakan sebagai alat bantuan untuk kaunselor keluarga di dalam terapi klinikal dan bukan klinikal. Terutamanya, program pendidikan psiko ENRICH ini sangat efisien untuk dijalankan secara sistematik untuk pasangan-pasangan Iran. Oleh itu adalah

dicadangkan agar para kaunselor perkahwinan diberi latihan dalam mengaplikasikan program ENRICH ini di dalam praktis kaunseling.

ACKNOWLEDGEMENTS

A person cannot go through life without the help and guidance from others. One is invariably indebted, knowingly or unknowingly. These debts may be physical, mental, psychological or intellectual in nature, but cannot be denied. To enlist all of them is not easy. To repay them even in words is beyond my capability. The present work is an imprint of many persons who have made significant contribution to its materialization.

The success of this thesis would not have been possible without various contributions and support to this work directly or indirectly, and I would like to convey my special appreciation to those who made it possible. To my beloved, Allahyarham Assoc. Prof. Dr. Lily Mastura Hj. Harun who guided me for three years. For all the kindness, support, understanding and love that she offered, may Allah put her with Solihin, Siddiqin and Mukminin. AL-FATIHAH. I wish to express my deep sense of appreciation and gratitude to my committee chairman and supervisor, Assoc. Professor Dr Sidek Mohd Noah for his valuable help, guidance and supervision of this thesis. Your constant support and encouragement have helped me to press on until the research was completed. I learned and experienced a lot in doing good research work.

I am grateful to my advisory committee members, Dr. Siti Aishah Bt Hassan, and Dr. Maznah Bt Baba for their recommendations and guidance that led to the successful completion of this thesis. Please accept my heartiest gratitude, you all have been sources of help, encouragement and valuable advice to me. I am also

grateful for your valuable suggestions and guidance during this study, without which the completion of my research would not have been possible.

I am equally thankful to all the staff of UPM, especially those of the Faculty of Educational Studies who contributed to my learning process. Your behaviour was so friendly, I enjoyed a lot, thanks a lot to all of you. Words are not enough to express my gratitude to my family for their patience and perseverance during my absence. I owe a lot to my mother and my mother-in-law for accepting the inconveniences my absence may have caused them. They have been a constant source of encouragement. I am also deeply indebted to many individuals who assisted me in performing this research. I would like to offer my sincere gratitude to Dr. Jafarinezhad and Ismaeil Fazel for their valuable guidance.

Finally, I am especially grateful to my dear husband and my children for their love, moral support and patience during the course of my study. And above all, I give all praise and adoration to Almighty and Merciful Allah, who enabled me to accomplish this hectic course with a sound health.

I certify that a Thesis Examination Committee has met on 22 February 2011 to conduct the final examination of Mahin Askari on her thesis entitled “Effects of communication and conflict resolution skills training on marital satisfaction and mental health among Iranian couples” in accordance with the Universities and University Colleges Act 1971 and the Constitution of Universiti Putra Malaysia [P.U. (A) 106] 15 March 1998. The committee recommends that the student be awarded the Doctor of Philosophy.

Members of the Examination Committee are as follows:

Habibah Elias, PhD

Professor
Faculty of Educational Studies
Universiti Putra Malaysia
(Chairperson)

Hajjah Rusnani Abdul Kadir, PhD

Associate Professor
Faculty of Educational Studies
