## EVALUATION OF MUNICIPAL SOLID WASTE GENERATION IN SELECTED SABAH WATER VILLAGES

By

#### FATMA SABARIAH BINTI ALIAS

#### February 2014

Chair : Assoc. Prof. Latifah Abd Manaf, PhD

Faculty : Environmental Studies

Life in the estuary and the beach is a unique settlement patterns in the history of Malaysia. Sabah is well known for its water village settlement that built on very high wooden pillars in estuarine and coastal water area. However, nowadays solid waste has become a serious problem especially in water village where the solid waste has stranded at the surrounding of the village area. Thus, the aim of this study is to evaluate municipal solid waste generation in the selected water villages in Sabah. The solid waste evaluation conducted at three different water villages which are Kampung Tanjung Batu Laut, Tawau; Kampung Tanjung Aru, Kota Kinabalu and Kampung Sim-Sim, Sandakan. There are about 150 households involved in solid waste generation and composition study while total of 242 respondents were involves in the survey study. Total solid waste generation was 1519.30 kg which the solid waste generation rate per household was 0.29 kg/person/day respectively. Almost 48% of respondents have discharge directly their waste into the sea. This is because by using a severity index the average of respondent knowledge is 77% but only 48% of respondent aware on the proper way in handling the solid waste. Furthermore, the results from the linear model revealed that attitude have significant relationship which influence the solid waste generation. Hence, the water villages should have an effective solid waste management in order to reduce bad impact to the environment and public health.

Keyword: water village, solid waste, waste generation, solid waste management, attitude

Abstrak tesis yang dikemukakan kepada Senat Universiti Putra Malaysia sebagai memenuhi keperluan untuk Ijazah Sarjana Sains

## PENILAIAN PENJANAAN SISA PEPEJAL DI KAMPUNG AIR SABAH YANG TERPILIH

Oleh

## FATMA SABARIAH BINTI ALIAS February 2014

Pengerusi : Prof. Madya Latifah Abd Manaf, PhD

Fakulti : Pengajian Alam Sekitar

Kehidupan di muara dan pantai adalah pola penempatan yang unik dalam sejarah Malaysia. Sabah terkenal dengan penempatan kampung air yang dibina di atas tiang kayu yang sangat tinggi di muara dan kawasan pesisir pantai. Walau bagaimanapun, pada masa ini sisa pepejal telah menjadi satu masalah yang serius di mana sisa pepejal telah terapung di sekitar kawasan kampung air. Oleh itu, tujuan kajian ini adalah untuk menilai tahap penjanaan sisa pepejal di kampung-kampung air yang terpilih di Sabah. Penilaian sisa pepejal telah dijalankan di tiga buah kampung air yang berbeza iaitu Kampung Tanjung Batu Laut, Tawau; Kampung Tanjung Aru; Kota Kinabalu dan Kampung Sim-Sim; Sandakan. Terdapat kira-kira 150 isi rumah terlibat dalam kajian penjanaan sisa pepejal dan komposisi manakala sejumlah 242 responden terlibat dalam kajian soal selidik. Jumlah penjanaan sisa pepejal adalah 1519,30 kg di mana kadar penjanaan sisa pepejal bagi setiap isi rumah adalah 0.29 kg/orang/hari masing-masing. Hampir 48% daripada responden telah membuang sisa mereka ke dalam laut. Berdasarkan indeks severiti, purata pengetahuan responden adalah 77% tetapi hanya 48% responden yang tahu mengenai cara pengendalian sisa pepejal yang betul. Tambahan pula, keputusan daripada model linear mendedahkan bahawa tingkah laku mempunyai hubung kait yang signifikan dengan penjanaan sisa pepejal. Oleh itu, kampung-kampung air perlu mempunyai pengurusan sisa pepejal yang efektif untuk mengurangkan kesan buruk kepada alam sekitar dan kesihatan awam.

Kata Kunci: kampung air, sisa pepejal, penjanaan sisa, pengurusan sisa pepejal, sikap

#### ACKNOWLEDGEMENTS

#### Bismillahirrahmanirrahim,

Give thanks to Allah SWT, The Lord of Majesty and Generosity for blessing me with the patience, strong will and good health during the preparation of the Master Research project. This project is successfully completed with the support, guidance and contribution from many individuals.

Firstly, deepest appreciation and thank you to my supervisor, Assoc. Prof. Dr. Latifah Abd Manaf, my co-supervisor Dr Sabrina Ho. Abdullah and Dr Mariani Ariffin @ Ho Nyuk Onn for their precious advices, ideas, comments, encouragement and guidance. It is a wonderful journey of project implementation under their supervision, who patiently guides me to the perfection.

A heartful thanks to my beloved parents, my siblings, and all my friends that involves in this project directly and indirectly. Special thanks to my Master mate and friends, Nurashida Saad, Nurul Fadila Fadhilludin, and Nor Syahira Mohammad for the helps, support and encouragement in finishing this project.

Thank You.

This thesis was submitted to the Senate of Universiti Putra Malaysia and has been accepted as fulfilment of the requirement for the Master of Science. The members of the Supervisory Committee were as follows:

#### Latifah Abd Manaf, PhD

Associate Professor Faculty of Environmental Studies Universiti Putra Malaysia (Chairman)

#### Sabrina Ho Abdullah, PhD

Senior Lecturer Faculty of Environmental Studies Universiti Putra Malaysia (Member)

#### Mariani Ariffin @ Ho Nyuk Onn, PhD

Senior Lecturer Faculty of Environmental Studies Universiti Putra Malaysia (Member)
