DEDICATION

In the name of Allah, Most Gracious, Most Merciful,
Praise Be to Allah, the Cherisher and Sustainer of the Worlds,
and Peace and Prayer be upon the final
Prophet and Messenger.

In memory of My Father and My Mother
Mohd Marjan bin Ismail and Salmah Binti Jais.
Thank you for all the love you had given me,
moulding me into who I am today.

and a special dedication

To the cancer survivors who go through life every day while silently
encouraging the rest of us to live life to the fullest.

Abstract of Thesis presented to the Senate of Universiti Putra Malaysia in fulfillment of the requirement for the degree of Doctor of Philosophy

**MODELLING OF ACCIDENTS ON TWO-LANE SINGLE
CARRIAGEWAY ROADS IN MALAYSIA**

By

JAMILAH MOHD MARJAN

April 2011

Chairman: Dato' Ir. Radin Umar Radin Sohadi, Ph.D

Faculty: Engineering

Road safety management in Malaysia comprises implementation of road safety auditing, blackspot treatment, maintenance management and the safe system approach road assessment programme. All these efforts are implemented on two-lane carriageway roads where a high percentage of accidents occur. Currently the interventions are based on guidelines from developed countries and studies from local research.

The purpose of this research is to develop accident prediction models with respect to traffic and road geometry on a two-lane single carriageway road network. This research focused on modeling accident rates in relation to various categories of roadway conditions. The models derived would be used by engineers to guide them in making choices in terms of road safety enhancement to the road network.

This research was carried out in the State of Selangor on the Federal trunk roads and it was a representative of Federal road network in the country in terms of conditions and environment. The research was focused on accidents along a two-lane single carriageway road. Traffic and geometric data were collected, analysed and modelled using the GENSTAT software. Poisson regression was used in the modeling of accidents; which is the common method in analysing accident data.

Two groups of model were developed. The 'Engineers' models' were developed for the use of practicing engineers in the region and the 'HDM models' developed for the use of road managers in accident prediction and economic analysis in the maintenance management HDM4 system. These models are very useful to compute accident cost savings with the implementation of specific infrastructure improvement.

It was found that different explanatory variables affect differently for different types of accidents. Total and damage accidents were very similar, while casualty and injury accidents resulted in different variables in the models developed. Casualty is fatal and injury accidents combined in this research. Fatal accident model was the most difficult to model as most of the variables were not significant in explaining fatal accidents. The 'Engineers' models' and the 'HDM models' are very similar in the fact that the variables that had a significant effect on total, damage, casualty, injury and fatal accident were similar in both models.

Abstrak tesis yang dikemukakan kepada Senat Universiti Putra Malaysia
sebagai memenuhi keperluan untuk ijazah Doktor Falsafah

**MODEL KEMALANGAN DI JALAN DUA LORONG DUA HALA
DI MALAYSIA**

Oleh

JAMILAH MOHD MARJAN

April 2011

Pengerusi: Dato' Ir. Radin Umar Radin Sohadi, Ph.D

Fakulti: Kejuruteraan

Di Malaysia, pengurusan keselamatan jalan raya merangkumi pelaksanaan audit keselamatan jalan, memperbaiki lokasi-lokasi yang kerap berlaku kemalangan, pengurusan penyelenggaraan dan pendekatan mengadakan persekitaran jalan yang selamat dengan pelaksanaan program penilaian jalan. Kesemua usaha-usaha dilaksanakan di jalan dua lorong dua hala dimana banyak berlakunya kemalangan. Usaha pembaikan ini adalah berdasarkan kajian-kajian yang dijalankan di luar dan juga didalam Negara.

Tujuan kajian ini adalah untuk pembentukan model-model ramalan kemalangan dari aspek trafik dan kejuruteraan jalan bagi jalan jenis dua lorong dua-hala. Kajian ini tertumpu kepada pembentukan model-model dengan kaitan kepada keadaan dan geometri jalan yang berbeza-beza. Model-model ini dapat membantu jurutera-jurutera memilih jenis dan kaedah pembaikan keatas jalan raya untuk meningkatkan tahap keselamatan.

Kajian ini dijalankan di Negeri Selangor di jalan Persekutuan yang menggambarkan jalan-jalan Persekutuan di seluruh Negara yang ada persamaan dari segi keadaan dan persekitaran. Kajian ini tertumpu kepada jenis jalan dua lorong dua-hala. Pengumpulan data trafik dan ciri-ciri kejuruteraan jalan dilaksanakan, dianalisa dan pembentukan model dengan menggunakan perisian GENSTAT. Regresi 'Poisson' yang lazim digunakan dalam pembentukan model-model kemalangan telah digunakan dalam kajian ini.

Pembentukan model ini terbahagi kepada dua kumpulan. Model pertama dinamakan model 'Engineers' yang direkabentuk khusus untuk diguna oleh jurutera-jurutera di Daerah manakala model kedua dinamakan model 'HDM' dimana model ini boleh digunakan oleh jurutera yang ditanggungjawab dengan pengurusan penyelenggaraan untuk menjangka kadar kemalangan dan menjalankan penganalisaan ekonomi di dalam sistem pengurusan penyelenggaraan HDM-4. Model kemalangan ini diguna membantu dalam pengiraan penjimatan kos kemalangan dengan pelaksanaan pembaikan infrastruktur yang tertentu.

Adalah didapati dari kajian ini bahawa pembolehubah yang berbeza menyebabkan jenis-jenis kemalangan yang berbeza. Model jumlah kemalangan dan kemalangan rosak mempunyai banyak persamaan, sementara model kemalangan mengakibatkan kecederaan mengandungi pembolehubah yang agak berbeza. Model kemalangan maut adalah yang

paling rumit dalam pembentukan model. Kebanyakan pembolehubah tidak signifikan untuk model kemalangan maut. Walaubagaimanapun model 'Engineers' dan 'HDM' mempunyai banyak persamaan dimana pembolehubah yang signifikan adalah sama bagi kedua-dua model untuk semua jenis kemalangan.

ACKNOWLEDGEMENTS

Without a doubt, I am most grateful to the Chairman of the supervisory committee, Dato' Ir. Dr. Radin Umar Radin Sohadi for his guidance, invaluable advice, criticisms, encouragement, challenge and trust throughout the course of this study. Despite his illness, he has continuously assisted me till the completion of my thesis and I am honoured to have been under his chairmanship. My heartfelt thanks to my co-supervisors, Dr. Wong Shaw Voon and Dato' Ir. Dr. Safry Kamal Ahmad for their help and guidance in the course of this study. My appreciation also goes to Ir. Dr. Dadang Mohamad Ma'some, who was my co-supervisor at the initial stage of my studies until he left for home in Indonesia.

Thank you to the Director General of the Public Works Department Malaysia for trusting and allowing me to pursue my studies on a full time basis. My appreciation to the Director General of Malaysian Institute of Road Safety Research (MIROS) for allowing me to continue the studies on a part time basis after reporting for duty.

I would like to thank the Road Facility Maintenance Division, Public Works Department (JKR), Head Quarters then under the leadership of Dato' Ir Dr Safry Kamal Ahmad for all their help in the organization of the data collection for the research. I too would like to extend my appreciation to Ir Jamal Sulaiman, JKR Selangor then, under whose leadership made it possible for

the District engineers and their team, who had been a great help in assisting me during the data collection period. These districts were:

Pejabat JKR Selangor

Pejabat JKR Petaling

Pejabat JKR Daerah Klang

Pejabat JKR Daerah Gombak

Pejabat JKR Daerah Hulu Langat

Pejabat JKR Daerah Kuala Langat

Pejabat JKR Daerah Sepang

Pejabat JKR Daerah Kuala Selangor

Pejabat JKR Daerah Hulu Selangor

Pejabat JKR Sabak Bernam

Also, thank you to the team from these organisations:

Cawangan Jalan, Ibu Pejabat JKR.

Unit Keselamatan Jalan, Cawangan Jalan, Ibu Pejabat JKR

Kumpulan Ikram Sdn. Bhd.

Polis DiRaja Malaysia Bukit Aman

Pejabat Polis Daerah Petaling Jaya

Pejabat Polis Daerah Kajang

Pejabat Polis Daerah Sungai Buloh

Road Safety Research Centre, Universiti Putra Malaysia.

To everyone involved, my sincerest thanks of which without your assistance this research would not have been possible to undertake.

I am indebted to ACP Rosli Mohd Noor, SI Ahmad Shah Muhayat, and all the staff of Traffic Branch, Royal Malaysian Police, Bukit Aman, Kuala Lumpur and SI Rosli Ahmad and his team from the Petaling Jaya Branch, for their advice and guidance in using the CARS database.

Thank you to Dr. Law Teik Hwa and Dr Hussain Hamid from the Engineering Faculty for all their help in assisting me with the Statistics and the usage of the GENSTAT software. My appreciation also goes to Mr. Jamaluddin, Mr. Alvin Poi, Miss Sharifah Allyana and Mrs. Iman Liyana who were then Research Assistants at the Road Safety Research Centre, Universiti Putra Malaysia. To the staff of the UPM Engineering Faculty, Mr Azlia, Ms. Noriah, Ms. Nadia and Ms Messiah, whose assistance made the University's procedures seemed easier to abide.

To my three children Josey Areza, Juaini Ayla and Mohamad Azeem, thank you for being patient and understanding throughout my study period. Kindly accept my sincerest apologies as there were times when I was not playing my role as a mother. My appreciation goes to my sisters who were always there for my children when the tasks were too much for me to bear. To all the new additions to the family including Shida, Syahmi, Almira and Amir, juggling my new roles were at times very daunting. Thank you for accepting me the way I am. To all my best friends, only you know the role you played in my life through this study period. Last but not least, to my husband, Wan, thank you for everything.

I certify that a Thesis Examination Committee met on 7th April 2011 to conduct the final examination of Jamilah binti Mohd Marjan on her thesis entitled “Modelling of Accidents on Two-Lane Single Carriageway Roads in Malaysia” in accordance with the Universities and University College Act 1971 and the Constitution of the Universiti Putra Malaysia [P.U.(A) 106] 15 March 1998. The committee recommends that the student be awarded the Doctor of Philosophy.

Members of the Thesis Examination Committee were as follows:

Thamer Ahmad Mohammad Ali, PhD

Professor
Faculty of Engineering
Universiti Putra Malaysia
(Chairman)

Hussain bin Hamid, PhD

Senior Lecturer
Faculty of Engineering
Universiti Putra Malaysia
(Internal Examiner)

Law Teik Hua, PhD

Lecturer
Faculty of Engineering
Universiti Putra Malaysia
(Internal Examiner)

S.C. Wong, PhD

Professor
The University of Hong Kong
Hong Kong
(External Examiner)

NORITAH OMAR, PhD

Associate Professor and Deputy Dean
School of Graduate Studies
Universiti Putra Malaysia

Date: 23 August 2011

This thesis was submitted to the Senate of Universiti Putra Malaysia and has been accepted as fulfillment of the requirement for the degree of Doctor of Philosophy. The members of the Supervisory Committee were as follows:

Dato' Ir. Radin Umar Radin Sohadi, PhD

Faculty of Engineering
Universiti Putra Malaysia
(Chairman)

Wong Shaw Voon, PhD

Associate Professor
Faculty of Engineering
Universiti Putra Malaysia
(Member)

Dato' Ir. Safry Kamal Ahmad, PhD

Director
Perak Public Works Department
Perak, Malaysia
(Member)

HASANAH MOHD GHAZALI, PhD

Professor and Dean
School of Graduate Studies
Universiti Putra Malaysia

Date:

DECLARATION

I hereby declare that the thesis is based on my original work except for quotations and citations, which have been duly acknowledged. I also declare that it has not been previously or concurrently submitted for any other degree at UPM or other institutions.

JAMILAH MOHD MARJAN

Date: 24 December 2010
