Chairman: Associate Professor Arshad Abd. Samad, PhD

Faculty: Educational Studies

Considering the growing interest in task-based language teaching, research that investigates the effects of task complexity on second language (L2) development is needed. Currently, there is insufficient classroom-based research that investigates the language learning outcomes that may occur as a result of engaging in tasks of differing reasoning demands in a variety of task conditions. This study aims to fill in some of the gap by investigating the main and interaction effects of two levels of Task Reasoning Demand (TRD) and individual versus dyadic Task Conditions (TC) on learner perceptions of affective factors, as well as the accuracy and syntactic complexity of learner written output. Also, this study investigated the effects of TRD and types of negotiation (negotiation of form versus negotiation of meaning) on frequency of LREs. In addition, this study investigated the effects of TRD and repair practices (self-

initiated repair versus other-initiated repair, and self-repair versus other-repair) on the repair outcomes (whether errors were correctly resolved, incorrectly resolved or abandoned).

The study draws on the Noticing Hypothesis (1990), the Output Hypothesis (1995), and the Interaction Hypothesis (1996) to rationalise the use of focus-on-form in a task-based context, while Robinson's Cognition Hypothesis (2007) for task-based language Teaching (TBLT) and Skehan's Trade-off Hypothesis (2009) underpin the use of task complexity variables to influence language production.

The participants were 76 Form six students in a public secondary school in Selangor, Malaysia. Using a quasi-experimental research design incorporating a repeated-measures Latin-square design, participants were randomly assigned to one of four groups. Each group was exposed to all four combinations of the two levels of TRD and two levels of TC, but in different orders. Data were gathered using an affective questionnaire administered after each session, audio-recordings of learner-learner interaction, and learner written output.

The data collected were analysed using descriptive statistics, repeated-measures MANOVA and repeated-measures factorial ANOVAs. Some of the main findings were that both TRD and TC had significant main effects on learner perceptions of affective factors. Also, the number of LREs during negotiation of form was significantly lower during the +TRD task

compared to the –TRD task. Results also showed beneficial effects of learner repair practices in eliciting correct resolutions of errors during LREs. Finally, both TRD and TC had significant main effects on grammatical accuracy and syntactic complexity. TRD and TC also had a significant interaction effect on syntactic complexity.

The results provided some empirical and theoretical support for Robinson's Cognition Hypothesis (2007) and Skehan's Trade-off Hypothesis (2009). It also highlights the beneficial effects of using learner repair practices in a task-based context. The study also implies that educators should consider the effects of TRD on the frequency of LREs involving negotiation of meaning and negotiation of form when using tasks in the L2 classroom. Finally, the study suggests that, when using tasks in the classroom, educators should consider the effects of TRD and TC on learner affective factors, as well as their effects on grammatical accuracy and syntactic complexity in learner output.

Fakulti: Pengajian Pendidikan

Memandangkan terdapat peningkatan perhatian terhadap penggunaan pengajaran berasaskan tugas (*task-based language teaching*), kajian tentang kesan-kesan kerumitan tugas (*task complexity*) terhadap perkembangan penggunaan bahasa kedua diperlukan. Buat masa ini, terdapat kekurangan kajian yang menyelidik hasil pembelajaran apabila pelajar terlibat dalam tugas-tugas yang memerlukan tahap penaakulan yang berbeza di dalam konteks pembelajaran yang berbeza. Kajian ini bertujuan menyumbang kepada literatur dengan mengkaji kesan penggunaan dua tahap keperluan penggunaan kebolehan menaakul (TRD) dalam dua konteks iaitu melaksanakan tugas secara individu atau perbincangan dengan rakan (TC) terhadap factor-faktor afektif. Kajian ini juga mengkaji kesan utama dan interaksi TRD dan TC terhadap hasil penulisan pelajar, khususnya dari segi ketepatan penggunaan tatabahasa dan tahap kerumitan sintaksis. Untuk mengkaji kesan-kesan TRD terhadap

perbincangan pelajar yang boleh menjurus kepada peluang pembelajaran bahasa kedua, kesan utama dan interaksi TRD dan jenis rundingan terhadap kekerapan episod yang membincangkan penggunaan bahasa (LREs) juga dianalisis. Selain itu, kesan-kesan utama dan interaksi TRD dan praktis pembaikan bahasa (*repair practice*) terhadap hasil perbincangan LREs juga diukur.

Kajian ini menggunakan Hipotesis *Noticing* (Shmidt, 1990), Hipotesis *Output* (Swain, 1995), dan Hipotesis Interaksi (Long, 1996) sebagai rasional memberikan fokus terhadap tatabahasa (*focus-on-form*) di dalam konteks pengajaran berasaskan tugas. Manakala, Hipotesis Kognitif (Robinson, 2007) untuk pengajaran berasaskan tugas dan Hipotesis *Trade-off* (Skehan, 2009) menjadi asas kepada penggunaan pembolehubah kerumitan tugas untuk mempengaruhi penggunaan bahasa.

Para peserta kajian adalah 76 orang pelajar tingkatan enam di sebuah sekolah menengah harian kerajaan di Selangor, Malaysia. Dengan menggunakan reka bentuk penyelidikan kuasi-eksperimen dengan ukuran berulang *latin-square*, peserta dibahagi secara rawak kepada salah satu daripada empat kumpulan. Setiap kumpulan telah didedahkan kepada kesemua empat kombinasi dua peringkat TRD dan dua peringkat TC, tetapi dalam turutan yang berbeza. Data dikumpul dengan menggunakan soal selidik afektif yang ditadbir selepas setiap sesi, audio-rakaman interaksi pelajar, dan hasil penulisan pelajar.

Data dianalisis menggunakan statistik deskriptif, ukuran berulang MANOVA dan ukuran berulang faktorial ANOVA. Antara penemuan utama ialah kedua-dua TRD dan TC mempunyai kesan utama yang signifikan pada persepsi pelajar tentang faktor-faktor afektif. Juga, bilangan LREs semasa rundingan tatabahasa adalah jauh lebih rendah semasa tugas yang mempunyai tahap TRD yang relatif tinggi berbanding dengan tugas yang mempunyai tahap TRD yang relatif rendah. Keputusan juga menunjukkan kesan positif amalan pembaikan penggunaan bahasa untuk mencapai resolusi yang tepat bagi memperbaiki kesilapan tatabahasa yang berlaku semasa LREs. Akhir sekali, kedua-dua TRD dan TC mempunyai kesan utama yang signifikan terhadap ketepatan tatabahasa dan kerumitan sintaksis. TRD dan TC juga mempunyai kesan interaksi yang signifikan kepada kerumitan sintaksis.

Keputusan memberi sokongan empirik dan teori bagi Hipotesis Kognitif (Robinson, 2007) dan Hipotesis *Trade-off* (Skehan, 2009). Ia juga menunjukkan kesan positif menggunakan amalan pembaikan penggunaan bahasa dalam konteks pengajaran berasaskan tugas. Kajian ini juga menunjukkan bahawa pendidik harus mempertimbangkan kesan TRD pada kekerapan LREs melibatkan rundingan makna dan rundingan tatabahasa apabila menggunakan tugas-tugas di dalam kelas. Akhir sekali, kajian ini mencadangkan bahawa, apabila menggunakan tugas di dalam kelas, pendidik harus mempertimbangkan kesan-kesan TRD dan TC ke atas faktor afektif diri pelajar, serta kesan TRD dan TC terhadap ketepatan tatabahasa dan kerumitan sintaktik dalam hasil penulisan pelajar.

ACKNOWLEDGEMENTS

First and foremost, I am grateful to the Almighty Allah for bestowing His blessings upon me and allowing for the completion of this dissertation.

It has been a challenging yet gratifying journey, and I will forever be indebted to the individuals who have helped me reach my destination. My special thanks and appreciation go to the chairman of my supervisory committee, Associate Professor Dr. Arshad Abd. Samad, whose insights and intellectual support have helped me from the early stages of the research until its completion. Without his comments, encouragement and contributions, this research might still be a work in progress. I would also like to express my heartfelt gratitude to the other members of my supervisory committee, Associate Professor Dr. Wong Bee Eng and Dr. Nooreen Noordin. I truly appreciate all their insightful comments, intellectual input, encouragement and guidance. Without their help, I might still be struggling with various issues in the research.

I would like to express my deepest gratitude to my husband, Encik Mat Rosani bin Hashim, for being so understanding and supportive. Also, I would like to express my appreciation to my parents, En. Ismail bin Bujang and Puan Hadijah bt. Busu, for their encouragement and unwavering support. Thank you so much for believing in me and instilling in me the strength and tenacity to achieve my goals. Also, my thanks go to my wonderful children, Aiman Najmi, Arif Fahmi and Sarah Hanim,

whose smiles give me all the strength that I need to face life's challenges. They are my true inspiration. My appreciation also goes to my sister and brother, Kak Syafini and Abang Bel, for always being there for me.

My sincere gratitude goes to the Ministry of Education for awarding me a scholarship to pursue my doctoral study. I am also thankful to the Educational Planning and Research Department, Ministry of Education and the Selangor State Education Department for allowing me to conduct this study. My appreciation also goes to the principal, teachers and students of SMK Kepong, Selangor for their support and cooperation during the data collection stage of the study. Last but not least, my heartfelt thanks go to my circle of friends who have helped me, directly or indirectly, throughout the course of this study.

I certify that an Examination Committee has met on 30 April 2013 to conduct the final examination of Lilliati Ismail on her Doctor of Philosophy thesis entitled "Effects of Task Reasoning Demand, Task Condition, Negotiation and Repair Practices on Affective Variables, Language-related Episodes, and Written Output" in accordance with Universiti Pertanian Malaysia (Higher Degree) Act 1980 and Universiti Pertanian Malaysia (Higher Degree) Regulations 1981. The Committee recommends that the student be awarded the degree of Doctor of Philosophy.

Members of the Examination Committee were as follows:

Rosnaini binti Mahmud, PhD

Faculty of Educational Studies
Universiti Putra Malaysia
(Chairman)

Ain Nadzimah binti Abdullah, PhD

Associate Professor
Faculty of Modern Languages and Communication
Universiti Putra Malaysia
(Internal Examiner)
