Abstract of thesis presented to the Senate of Universiti Putra Malaysia, in fulfilment of the requirement for the degree of Doctor of Philosophy

WAVELET VIDEO COMPRESSION

By

ROHMAD BIN FAKEH

December 2006

Chairman: Associate Professor Abdul Azim Bin Abd. Ghani, PhD

Faculty: Computer Science and Information Technology

The thesis proposes the current approaches in wavelet technology which has provided efficient framework of multi-resolution space-frequency representation with promising applications in video processing. This discrete wavelet transform (DWT) is becoming increasingly important in visual applications because of its flexibility in representing non-stationary signals such as images and video sequences. The main objective of this thesis is to develop a wavelet video compression system. There are however many parameters within a wavelet analysis and synthesis which govern the quality of a decoded video sequences such as boundary policies, quantization threshold, decomposition strategies and the choice of wavelet filter-banks. An evaluation of the visual quality of images and video sequences at different parameter settings leads to recommendations on the wavelet filter parameters to be used in video compression.

In this thesis the video compression schemes of 2D frame by frame and 3D spatio-temporal wavelet transformation are proposed. The standard spatio-temporal scheme has fixed number of sub-bands generated after the temporal decomposition and adopting adaptive quantization to the fixed number of sub-bands. The proposed spatio-temporal scheme proposed a flexible number of sub-bands generated depending on the penetration depth of the wavelet

transformation. The global and level-dependent-threshold quantization methodology with the statistical adaptive estimation of wavelet shrinkage for the transformed coefficients have been adopted and provides high compression performance even without entropy coding and comparable to other coding scheme utilizing other quantization methods. The level-dependent-threshold is found to be a useful tool for providing fixed rate and used throughout the simulations for the empirical evaluation of the tested parameters as compared to global threshold.

Extensive experimental investigations on a wide variety of monochrome and color images, and video sequences in QCIF, CIF and SIF resolutions are reported in this thesis. The international benchmark of visual quality evaluation of Mean Squared Error (MSE), Compression Ratio (CR), and Peak Signal to Noise Ratio (PSNR) are used as the objective measure of performance quality. Experimental results had shown that bi-orthogonal 9/7 (Bior-4.4) wavelet filters perform comparable for images and video sequences with less temporal activity however filter-banks from Symlet family (Sym-5) has shown to perform the best and out-performed others when applied to video sequences with even higher background activity such as the Car-phone and Akiyo sequences. Coding performance has been reported and performed best with dyadic DWT decomposition, periodic extensions and level-dependent threshold quantization.

Abstrak tesis yang dikemukakan kepada Senat Universiti Putra Malaysia
sebagai memenuhi keperluan untuk ijazah Doktor Falasafah

WAVELET BAGI PEMAMPATAN VIDEO

Oleh

ROHMAD BIN FAKEH

Disember 2006

Pengerusi: Profesor Madya Abdul Azim Bin Abd. Ghani, PhD

Fakulti: Sains Komputer dan Teknologi Maklumat

Tesis ini mengkaji secara mendalam konsep *wavelet* yang telah digunakan bagi aplikasi yang melibatkan pemrosesan video. *Discrete wavelet transform* – DWT, yang menggunakan kaedah multi-dimensi berupaya digunakan untuk pemrosesan imej dan gambar video secara berkesan. DWT telah menjadi penting bagi aplikasi data berbentuk video kerana kebolehannya dalam mengintegrasikan isyarat yang tidak tetap seperti video. Kajian utama tesis ini adalah bagi mengenalpasti kaedah wavelet-filter-banks dalam pemampatan sequent video. Namun terdapat beberapa kekangan yang perlu diambil-kira bagi menjamin kualiti keluaran yang tinggi seperti *boundary policies*, *quantization threshold* dan strategi decomposition. Penilaian kepada kualiti keluaran gambar dan video menggunakan beberapa *parameter* tersebut akan membolehkan cadangan terhadap penggunaan *parameter* penting untuk pemilihan wavelet filter yang boleh digunakan dalam pemampatan video.

Tesis ini mengkaji potensi skim pemampatan video menggunakan pergerakan wavelet dari *frame* ke *frame* dalam dimensi 2D, serta transformasi dalam dimensi 3D atau kaedah *spatio-temporal* dalam pemrosesan visual data. Kaedah biasa skim *spatio-temporal* ini menggunakan jumlah sub-bands yang tetap setelah dilakukan dekomposisi diantara *frame*

gambar (*temporal*). Kaedah *spatio-temporal* yang dicadangkan ini mempunyai keupayaan menjana jumlah sub-bands yang flexibal. Jadi penggunaan pemampatan menggunakan kaedah penyingkaran secara *global* dan *level-dependent threshold* ini telah menunjukkan pemampatan yang tinggi, walaupun tanpa *entropy coding* dan setanding dengan sistem yang menggunakan kaedah quantization lain.

Satu kajian *experimental* menggunakan beberapa jenis gambar imej hitam-putih dan warna serta gambar video warna dalam beberapa format seperti QCIF, CIF, SIF dalam beberapa nisbah pemampatan telah dilakukan menggunakan pengukuran *Mean Squared Error* (MSE), Nisbah Pemampatan (CR) dan *Peak Signal to Noise Ratio* (PSNR). Kajian mendapati jenis wavelet bi-orthogonal 9/7 (bior-4.4) telah menunjukkan prestasi yang kurang baik jika digunakan bagi gambar yang kurang pergerakan dan terbaik, namun jenis wavelet Symlet (sym-5) telah menunjukkan prestasi memberangsangkan jika digunakan bagi pemampatan gambar yang mempunyai pergerakan yang banyak terutamanya dibahagian latar belakang, seperti sequen Carphone dan Akiyo. Prestasi pemampatan yang tinggi telah dilaporkan menggunakan dekomposisi secara *dyadic DWT*, *periodic extensions* dan *level-dependent threshold quantization*, dengan jumlah kedalaman transformasi bergantung kepada saiz image dan video.

ACKNOWLEDGEMENTS

**Truly, In the name of Allah, The Most Beneficent,
Most Merciful**

As usual, when a piece of work this size comes to an end there are much more people to thank than is practically possible. To those I have forgotten to mention, thank you first of all. There are, however, a few people I remember in particular.

It is my pleasure to acknowledge and thanks all persons who have influenced me in the course of this research. First, I wish to express my gratitude to my Principal Supervisor and Advisor, Associate Professor Dr. Abdul Azim Bin Abd. Ghani for his technical guidance, and providing me not only with an interesting research topic, but also the resources I needed to bring it to a satisfactory conclusion. Despite his heavy administrative responsibility as the Chairman of the Supervisory Committee, and the Dean of Faculty of Computer Science and Information Technology, University Putra Malaysia (UPM) he always found time to entertain me, for such a long time of study, gave critical suggestions and endless guidance.

My significant acknowledgement is also due to Professor Dr. Mohd. Yazid. Bin Md. Saman, the former lecturer of Faculty of Computer Science and Information Technology, UPM but now is in KUSTEM, Terengganu, and Associate Professor Dr. Abd. Rahman Bin Ramli, of Department of Communication and Computer Systems, Faculty of Engineering, UPM, who are the members of the Supervisory Committee, for their time, continued critical suggestions and endless guidance.

To carry out a research like this, one must work in a stimulating and friendly atmosphere, and enjoy the support in the form of facilities, tools, finances for international seminars and efficient organizations. I have been very fortunate to have all of the above and it has been made possible by the Faculty of Computer Science and Information Technology, led by Associate Professor Dr. Abdul Azim Bin Abdul Ghani, and the Post Graduate Coordinator, Associate Professor Dr. Hajjah Fatimah Bte Dato' Ahmad, also the former coordinators: Associate Professor Dr. Ramlan Bin Mahmod, Dr. Hamidah Bte Ibrahim and Dr. Rozita. Thank you very much.

I gratefully acknowledged the generous financial support of The Public Service Department of Malaysia (PSD), for providing Scholarship and the full salary throughout the duration of my research work in UPM, and made this research possible.

I am also indebted to: Associate Professor Dr. Ramlan Bin Mahmod (Deputy Dean-Academic), Associate Professor Dr. Ali Bin Mamat (Deputy Dean-Development), Associate Professor Dr. Hj. Mohd. Hassan Bin Selamat (Head of Department of Information System), Associate Professor Dr. Nasir (Head of Department of Computer Science), Associate Professor Dr. Mohamed Bin Othman (Head of Department of Communication Technologies and other lecturers: Dr. Elok Robert, Dr. Rosli, Mr. Noordin and Dr. Taufik. I also wish to acknowledge the anonymous internal and external examiners of this thesis.

Special thanks are due to Dr. Zulkarnain Bin Mohd. Yusof, of TM Research and Development, Serdang, and Associate Professor Dr. Mohammed Deriche of Queensland University of Technology, (QUT) Australia, for their valuable comments on this research in the field of wavelets and video compression during my course of attachments at the respective

universities. Special thanks are also due to Dr. Khairuddin Bin Omar, the Head of Department (Information System and Technology), National University of Malaysia (UKM), for some technical discussions that we had.

I would like to thank all the past and present members of the staff members of the Faculty of Computer Science and Information Technology, and the Post Graduate Research Laboratory, especially Mr. Azman and Mr Shamsul, for their help and cooperation. I still remember the unforgettable time when Mr. Nasir had help me to climb over my room for my left car key. Thank you very much indeed.

I have enjoyed very much the company of my colleagues in the Faculty of Computer Science & IT lab, Mr. Ali Aziz, Mr. Abdul Aziz Gill, and Mr. Hendry. Also to Mr. Safoor, Mr Ahmed, Mr. Yeo, Mr. Lee of the Multimedia and Imaging System Research Group (MISRG), of Department of Communication and Computer Systems, Faculty of Engineering, UPM for the good times, during academic visits and discussion we had.

Last, and by no means the least, I would like to express my special gratitude to my spouse, Dalila Yusuf, my children, Mohd. Saufy, Raihana, Mohd. Syafiq, for supporting me through the very long years of study: patience, full encouragement and support. Thank you very much. I am sure it has meant more to me than I can comprehend.

I certify that an Examination Committee has met on 7th. December 2006 to conduct the final examination of Rohmad Bin Fakeh on his Doctor of Philosophy thesis entitled "Wavelet Video Compression" in accordance with Universiti Pertanian Malaysia (Higher Degree) Act 1980 and Universiti Pertanian Malaysia (Higher Degree) Regulations 1981. The Committee recommends that the candidate be awarded the relevant degree. The Committee Members for the candidate are as follows:

Ali Bin Mamat, PhD

Associate Professor
Faculty of Computer Science and Information Technology
Universiti Putra Malaysia
(Chairman)

Ramlan Bin Mahmod, PhD

Associate Professor
Faculty of Computer Science and Information Technology
Universiti Putra Malaysia
(Internal Examiner)

Shamala Subramaniam, PhD

Lecturer
Faculty of Computer Science and Information Technology
Universiti Putra Malaysia
(Internal Examiner)

Kasmiran Jumari, PhD

Professor
Department of Computer Systems and Communications
Faculty of Engineering
National University Of Malaysia
(External Examiner)

HASANAH MOHD. GHAZALI, PhD

Professor/Deputy Dean
School of Graduate Studies,
Universiti Putra Malaysia

Date: 27 April 2007

This thesis submitted to the Senate of Universiti Putra Malaysia and has been accepted as fulfilment of the requirement for the degree of Doctor of Philosophy. The members of the Supervisory Committee are as follows:

Abdul Azim Abd. Ghani, PhD

Associate Professor
Faculty of Computer Science and Information Technology
Universiti Putra Malaysia
(Chairman)

Abdul Rahman Ramli, PhD

Associate Professor
Faculty of Engineering
Universiti Putra Malaysia
(Member)

Mohd. Yazid Md. Saman, PhD

Professor
Kolej Universiti Sains dan Teknologi Malaysia (KUSTEM)
(Member)

AINI IDERIS, PhD

Professor/ Dean
School of Graduate Studies
Universiti Putra Malaysia

Date: 10 MAY 2007

DECLARATION

I hereby declare that the thesis is based on my original work except for quotations and citations which have been duly acknowledged. I also declare that it has not been previously or concurrently submitted for any other degree at UPM or other institutions.

ROHMAD BIN FAKEH

Date : 6 April 2007

5.50	For LVD of Level 1 of Mean Squared error (MSE), with $m=100$, $CR=4:1$, Density=6371, Periodic, Ten (10) Source Video Sequences in QCIF Format.	5.96
5.51	For LVD of Level 2 of Mean Squared error (MSE), with $m=100$, $CR=15:1$, Density=1638, Periodic, Ten (10) Source Video Sequences in QCIF Format.	5.96
5.52	For LVD of Level 3 of Mean Squared error (MSE), with $m=100$, $CR=54:1$, Density=463, Periodic, Ten (10) Source Video Sequences in QCIF Format.	5.97
5.53	For LVD of Level 4 of Mean Squared error (MSE), with $m=100$, $CR=144:1$, Density=175, Periodic, Ten (10) Source Video Sequences in QCIF Format.	5.97
5.54	For LVD of Level 5 of Mean Squared error (MSE), with $m=100$, $CR=150:1$, Density=168, Periodic, Ten (10) Source Video Sequences in QCIF Format.	5.98
5.55	The average Mean Squared Error (MSE) for LVD of Level 1 to 5 for 10 QCIF Video Sequences using Periodic Extensions.	5.98
5.56	Simulation results for Carphone sequences of QCIF size at 15fps decoded at average data rate of 64 kbps using the proposed algorithm with Biorthogonal filter	5.100
5.57	Simulation results for Carphone sequences of QCIF size at 15fps decoded at average data rate of 64 kbps using the proposed algorithm with Daubechies filter	5.101
5.58	Simulation results for Carphone sequences of QCIF size at 15fps decoded at average data rate of 64 kbps using the proposed algorithm with Coiflets filter	5.102
5.59	Simulation results for Carphone sequences of QCIF size at 15fps decoded at average data rate of 64 kbps using the proposed algorithm with Symlets filter	5.103
5.60	Simulation results for Carphone sequences of QCIF size at 15fps decoded at average data rate of 64 kbps using the proposed algorithm with the best Biorthogonal, Coiflets and Symlets filters	5.104
5.61	Simulation results for Miss America and Carphone Sequence of QCIF size, at 5 fps decoded at data rates of 16kbps and 64kbps respectively, using the proposed algorithm with bi-orthogonal filters, Daubechies, Coiflets and Symlets	5.105

5.62	Simulation results for Foreman sequences of QCIF size 174x144 pixels, at 10 frames per second decoded at different data rates of 20,32,64,128 and 256 kbps respectively, using the proposed algorithm with bi-orthogonal filter of length 17/11	5.106
5.63	Simulation results for Foreman sequences of QCIF size 174x144 pixels, at 15 frames per second decoded at different data rates of 20,32,64,128 and 256 kbps respectively, using the proposed algorithm with bi-orthogonal filter of length 17/11	5.106
5.64	Overall Video Sequence Usage Ranking for the best Wavelet Filter Using Level Dependent Threshold Based Individual Video	5.107
5.65	Results of tested video sequences using the proposed video compression scheme with (1) Periodic Extension (2) Biorthogonal:4.4 (3) Level-dependent Threshold (4) Frame rate of 10fps	5.109
5.66	Results of MSE and PSNR values of the tested video sequences using the proposed video compression scheme, with (1) Periodic Extension (2) Biorthogonal:4.4 (3) Level-dependent Threshold (4) Frame rate of 10fps.	5.111
5.67	Results of PSNR values of the tested video sequences using the proposed video compression scheme, with (1) Periodic Extension (2) Biorthogonal:4.4 (3) Level-dependent Threshold (4) Frame rate of 10fps	5.112
5.68	Performance Evaluation of the proposed WVC compared to Ashourian (2001) in PSNR, Bitrate and Compression Ratio for the decoded Luminance Y of Claire, Miss America, salesman, Suzie and and Carphone video sequences in QCIF Resolutions	5.127
5.69	Performance Evaluation of the proposed WVC compared to Peter (1999) in PSNR, Bitrate and Compression Ratio for Miss America and Carphone of QCIF Resolution	5.131
570	Overall analysis of the 4 Color Images of 512x512 pixels off MSE/CR for the tested video using the proposed video compression scheme, with Periodic Extension, Bior-4.4, Level-dependent Threshold, 10fps	5.134
5.71	Overall analysis of the 10 QCIF Video Sequences of MSE/CR for the tested video using the proposed video compression scheme, with Periodic Extension, Bior-4.4, Level-dependent Threshold, 10fps	5.135

LIST OF FIGURES

Figure	Page
1.1 Future DVB-X Receiver	1.2
2.1 The Encoder and decoder in a vector quantizer	2.4
2.2 1- D cosine basis functions	2.10
2.3 2-DCT basis functions	2.10
2.4 JPEG Picture Coder Architecture	2.12
2.5 H.261 Video Coder Architecture	2.14
2.6 MPEG-1/2 frame encoding	2.16
2.7 H.263 PB-frame encoding	2.16
2.8 Windowed Fourier Transform Domain	2.22
2.9 Two dimensional decomposition	2.23
2.10 Wavelet Transform Binary Graph	2.24
2.11 Wavelet Packet Transform binary graph, fully decomposed	2.25
2.12 Two level Wavelet Dyadic Horizontal and Vertical Filtering	2.26
2.13 Two dimensional Tree Structured Decomposition	2.26
2.14 Parent-Child Dependencies of Subbands	2.32
2.15 An 11 sub-bands tree-structured spatio-temporal decomposition	2.34
2.16 Template for displaying the 11-band decomposition	2.35
2.17 For the comparison of quality Average PSNR versus bitrate for several QCIF video sequences, at 10 and 30fps	2.39
2.18 For the comparison of quality Average PSNR versus Compression Ratio for several QCIF video sequences, at 10 and 30fps	2.40
2.19 Forward and inverse integer transform	2.45
3.1 Multi-resolution Representation	3.9
3.2 Multi-resolution Representation of $L \times S \times R$	3.11

3.3	Decomposition of signal using analysis filters	3.13
4.1	Proposed Wavelet Image Compression	4.3
4.2	Proposed 2D Wavelet Video Compression	4.7
4.3	Proposed 3D Wavelet Video Compression	4.9
4.4	(a) The original Lena Image, (b) Level 5 decomposition of Lena image, (c) Histogram plot of the original Lena image, (d) Frequency response after level 5 decomposition of Lena image	4.13
4.5	The Original, Y, Cb and Cr components for the Akiyo QCIF Sequence	4.16
4.6	The Original, Y, Cb and Cr components for the News CIF Sequence	4.16
4.7	The Original, Y, Cb and Cr components for the Stefan SIF Sequence	4.17
4.8	Decomposition of QCIF size Suzie Video Sequence	4.18
4.9	Wavelet decomposition of Average and Difference frame and the corresponding histogram plot for the 1 st . frame of Akiyo video sequence	4.19
4.10	Level one of 2-D DWT applied on an image	4.21
4.11	Level one of 2-D DWT of High-pass and Low-pass	4.21
4.12	Level Three Dyadic DWT scheme used for Image Compression	4.22
4.13	High-Pass Temporal and Low-Pass Temporal for Video sequences Compression	4.22
4.14	Scaling and Wavelets functions of Bior-2.2	4.28
4.15	Original Mesh of Lena	4.38
4.16	Mesh of Lena using Zero-padding	4.39
4.17	Mesh of Lena using Symmetrization	4.40
4.18	Mesh of Lena using Smooth Padding	4.41
4.19	Mesh of Lena using Periodic Padding	4.41
5.1	(a) Original QCIF of Miss America, (b) Mesh plot of original Miss America, (c) Histogram of original Miss America, and (d) Histogram of decoded Miss America at 32kbps/5fps, using Zero Padding.	5.6
5.2	Mesh plots of Miss America,(a) Periodic Extension, (b) Symmetric Extension, (c) Smooth-Padding, and (d) Zero-Padding.	5.7

5.3	The decoded Miss America at 32kbps/5fps using (a) Periodic Extension: 37.46dB, (b) Symmetric Extension: 36.79dB,(c) Smooth-Padding: 36.19 dB, and (d) Zero-Padding: 33.88 dB	5.8
5.4	The plots of the 100 frames Miss America at 32kbps/5fps using (a) Periodic Extension: 37.46dB, (b) Symmetric Extension: 36.79 dB, (c) Smooth-Padding: 36.19dB, and (d) Zero-Padding: 33.88dB. The PSNR difference between (a) and (d - which is the default setting) is 3.58dB	5.9
5.5	Plot for 100 frames of Salesman sequences of QCIF size at 5fps decoded at average data rate of 32kbps using the proposed algorithm with bior-4.4	5.10
5.6	Plot for 100 frames of Carphone sequences of QCIF size at 5fps decoded at average data rate of 32kbps using the proposed algorithm with bior-4.4	5.11
5.7	Plot for 100 frames of Claire sequences of QCIF size at 5fps decoded at average data rate of 32kbps using the proposed algorithm bior-4.4.	5.12
5.8	Plot of Foreman sequences of QCIF size at 5fps decoded at average data rate of 32kbps using the proposed algorithm with bior-4.4.	5.13
5.9	Plot of Suzie sequences of QCIF size at 5fps decoded at average data rate of 32kbps using the proposed algorithm with bior-4.4.	5.13
5.10	Decoded Miss America Sequence with (Average video bit-rate of 62 kbps, 7.5 fps Periodic Extensions, and using bior-4.4) average PSNR of 41.5	5.14
5.11	Decoded Miss America Sequence with (Average video bit-rate of 62 kbps, 7.5 fps, Symmetric Extensions, and using bior-4.4) average PSNR of 39.0 dB	5.15
5.12	Decoded Miss America Sequence with (Average video bit-rate of 62 kbps, 15 fps Symmetric Extensions, and using bior-4.4) average PSNR of 34.0 dB.	5.16
5.13	Decoded Miss America Sequence with (Average video bit-rate of 62 kbps, 15 fps Symmetric Extensions, and using bior-4.4) average PSNR of 34.0 dB	5.17
5.14	The Plot of PSNR against Global Threshold values for Stefan SIF Video sequences decoded using the four boundary strategies, and bior-4.4	5.18
5.15	The Plot of Compression Ratio against Global Threshold values for Stefan SIF Video sequences decoded using the four boundary strategies, and bior-4.4	5.18
5.16	Plot of PSNR Vs Number of Miss America Video Frames using Symlets wavelet family, Periodic Extensions and Global Threshold	5.22
5.17	Plot of Compression Ratio Vs Number of Miss America Video Frames using Symlets wavelet family, Periodic Extensions and Global Threshold	5.23

5.18	Plot of PSNR Vs Number of Akiyo Video Frames using Symlets wavelet family, Periodic Extensions and Global Threshold	5.23
5.19	Plot of Compression Ratio Vs Number of Akiyo Video Frames using Symlets wavelet family, Periodic Extensions and Global Threshold	5.24
5.20	Plot of PSNR Vs Number of Miss America Video Frames using Symlets wavelet family, Periodic Extensions and Level-Dependent Threshold	5.26
5.21	Plot of Compression Ratio Vs Number of Miss America Video Frames using Symlets wavelet family, Periodic Extensions and Level-Dependent Threshold	5.26
5.22	Plot of Density Vs Number of Miss America Video Frames using Symlets wavelet family, Periodic Extensions and Level-Dependent Threshold	5.27
5.23	Plot of MAE Vs Number of Miss America Video Frames using Symlets wavelet family, Periodic Extensions and Level-Dependent Threshold	5.27
5.24	Plot of MSE Vs Number of Miss America Video Frames using Symlets wavelet family, Periodic Extensions and Level-Dependent Threshold	5.28
5.25	Plot of PSNR Vs Number of Akiyo Video Frames using Symlets wavelet family, Periodic Extensions and Level-Dependent Threshold	5.28
5.26	Plot of MAE Vs Number of Akiyo Video Frames using Symlets wavelet family, Periodic Extensions and Level-Dependent Threshold	5.29
5.27	Plot of Density Vs Number of Akiyo Video Frames using Symlets wavelet family, Periodic Extensions and Level-Dependent Threshold	5.29
5.28	Plot of Compression Ratio Vs Number of Akiyo Video Frames using Symlets wavelet family, Periodic Extensions and Level-Dependent Threshold	5.30
5.29	Color image of size 1280x720, using Bi-Orthogonal of length 5/3 (bior-2.2), at Level 1 Wavelet Decomposition, Threshold value of 100, gives PSNR value of 26.46 dB, Compression Ratio of 4:1, MAE=119.6 and MSE=146.6.	5.32
5.30	The decoded color video sequence of Akiyo at average Compression Ratio of 1,407:1 when Level-Dependent Threshold at Penetration depth of 7, giving the overall decoded PSNR of only 22.66dB	5.35
5.31	The decoded color video sequence of Akiyo at average Compression Ratio of 11,650:1 when Level-Dependent Threshold at Penetration depth of 7, giving the overall decoded PSNR of only 19.44dB	5.36
5.32	The Plot for Average PSNR for Wavelet Packet and Discrete Wavelet Transform of using the best eight types of wavelet filters and Global threshold of 10	5.38

5.33	The Plot for Average PSNR for Wavelet Packet and Discrete Wavelet Transform of using the best eight types of wavelet filters and Global threshold of 20	5.39
5.34	The Plot for Average PSNR for Wavelet Packet and Discrete Wavelet Transform of using the best eight types of wavelet filters and Global threshold of 45	5.40
5.35	The Plot for Average PSNR for Wavelet Packet and Discrete Wavelet Transform of using the best eight types of wavelet filters and Global threshold of 85	5.41
5.36	The Plot for Average PSNR for Wavelet Packet and Discrete Wavelet Transform of using the best eight types of wavelet filters and Global threshold of 125	5.42
5.37	Plot of Density Versus Penetration Depth of Lena of size 512x512 pixels using the Periodic Extension and Level Dependent Threshold with bi-orthogonal filters	5.46
5.38	Plot of Compression Ratio Versus Penetration Depth of Lena of size 512x512 pixels using the Periodic Extension and Level Dependent Threshold with bi-orthogonal filters	5.46
5.39	Plot of Peak Signal to Noise Ratio (PSNR) Versus Penetration Depth of Lena of size 512x512 pixels using the Periodic Extension and Level Dependent Threshold with bi-orthogonal filters	5.47
5.40	Plot of Peak Signal to Noise Ratio (PSNR) Versus Penetration Depth of Lena of size 512x512 pixels using the Periodic Extension and Level Dependent Threshold with Coiflets filters	5.47
5.41	Plot of Peak Signal to Noise Ratio (PSNR) Versus Penetration Depth of Lena of size 512x512 pixels using the Periodic Extension and Level Dependent Threshold with Daubechies Wavelet filters	5.48
5.42	Plot of Peak Signal to Noise Ratio (PSNR) Versus Penetration Depth of Lena of size 512x512 pixels using the Periodic Extension and Level Dependent Threshold with Symlets Wavelet filters	5.48
5.43	Plot of Peak Signal to Noise Ratio (PSNR) Versus Penetration Depth of Barbara of size 512x512 pixels using the Periodic Extension and Level Dependent Threshold with Bi-orthogonal Wavelet filters	5.50
5.44	Plot of Peak Signal to Noise Ratio (PSNR) Versus Penetration Depth of Barbara of size 512x512 pixels using the Periodic Extension and Level Dependent Threshold with Coiflets Wavelet filters	5.50
5.45	Plot of Peak Signal to Noise Ratio (PSNR) Versus Penetration Depth of Barbara of size 512x512 pixels using the Periodic Extension and Level Dependent Threshold with Daubechies Wavelet filters	5.51

5.46	Plot of Peak Signal to Noise Ratio (PSNR) Versus Penetration Depth of Barbara of size 512x512 pixels using the Periodic Extension and Level Dependent Threshold with Coiflets Wavelet filters	5.51
5.47	Plot of Peak Signal to Noise Ratio (PSNR) Versus Penetration Depth of Goldhill of size 512x512 pixels using the Periodic Extension and Level Dependent Threshold with bi-orthogonal Wavelet filters	5.53
5.48	Plot of Peak Signal to Noise Ratio (PSNR) Versus Penetration Depth of Goldhill of size 512x512 pixels using the Periodic Extension and Level Dependent Threshold with Coiflets Wavelet filters	5.53
5.49	Plot of Peak Signal to Noise Ratio (PSNR) Versus Penetration Depth of Goldhill of size 512x512 pixels using the Periodic Extension and Level Dependent Threshold with Daubechies Wavelet filters	5.54
5.50	Plot of Peak Signal to Noise Ratio (PSNR) Versus Penetration Depth of Goldhill of size 512x512 pixels using the Periodic Extension and Level Dependent Threshold with Symlets Wavelet filters	5.54
5.51	Plot of Peak Signal to Noise Ratio (PSNR) Versus Penetration Depth of Akiyo of QCIF size using the Periodic Extension and Level Dependent Threshold with Bi-orthogonal Wavelet filters	5.56
5.52	Plot of Peak Signal to Noise Ratio (PSNR) Versus Penetration Depth of Akiyo of QCIF size using the Periodic Extension and Level Dependent Threshold with Coiflets Wavelet filters	5.56
5.53	Plot of Peak Signal to Noise Ratio (PSNR) Versus Penetration Depth of Akiyo of QCIF size using the Periodic Extension and Level Dependent Threshold with Daubechies Wavelet filters	5.57
5.54	Plot of Peak Signal to Noise Ratio (PSNR) Versus Penetration Depth of Akiyo of QCIF size using the Periodic Extension and Level Dependent Threshold with Symlets Wavelet filters	5.57
5.55	The original Lena (a) and the decoded images of Lena at 1.0 bpp, 0.5 bpp and 0.4 bpp using the proposed algorithm.	5.60
5.56	The decoded images of Lena at 0.3bpp, 0.25bpp, 0.125bpp ,and 0.0625bpp using the proposed algorithm.	5.61
5.57	Plot of Peak Signal to Noise Ratio (PSNR) Versus Number of Akiyo Video Frames of QCIF size using the Periodic Extension and Level Dependent Threshold with Bi-orthogonal Wavelet filters	5.66
5.58	Plot of Peak Signal to Noise Ratio (PSNR) Versus Number of Akiyo Video Frames of QCIF size using the Periodic Extension and Level Dependent Threshold with Coiffels Wavelet filters.	5.66

5.59	Plot of Peak Signal to Noise Ratio (PSNR) Versus Number of Akiyo Video Frames of QCIF size using the Periodic Extension and Level Dependent Threshold with Daubechies Wavelet filters	5.67
5.60	Plot of Peak Signal to Noise Ratio (PSNR) Versus Number of Akiyo Video Frames of QCIF size using the Periodic Extension and Level Dependent Threshold with Symlets Wavelet filters	5.67
5.61	Plot of Peak Signal to Noise Ratio (PSNR) Versus Number of Claire Video Frames of QCIF size using the Periodic Extension and Level Dependent Threshold with Bi-orthogonal Wavelet filters.	5.69
5.62	Plot of Peak Signal to Noise Ratio (PSNR) Versus Number of Claire Video Frames of QCIF size using the Periodic Extension and Level Dependent Threshold with Coiflets Wavelet filters.	5.69
5.63	Plot of Peak Signal to Noise Ratio (PSNR) Versus Number of Claire Video Frames of QCIF size using the Periodic Extension and Level Dependent Threshold with Daubechies Wavelet filters	5.70
5.64	Plot of Peak Signal to Noise Ratio (PSNR) Versus Number of Claire Video Frames of QCIF size using the Periodic Extension and Level Dependent Threshold with Symlets Wavelet filters.	5.70
5.65	Plot of Peak Signal to Noise Ratio (PSNR) Versus Number of Carphone Video Frames of QCIF size using the Periodic Extension and Level Dependent Threshold with Bi-orthogonal Wavelet filters.	5.72
5.66	Plot of Peak Signal to Noise Ratio (PSNR) Versus Number of Carphone Video Frames of QCIF size using the Periodic Extension and Level Dependent Threshold with Coiflets Wavelet filters.	5.72
5.67	Plot of Peak Signal to Noise Ratio (PSNR) Versus Number of Carphone Video Frames of QCIF size using the Periodic Extension and Level Dependent Threshold with Daubechies Wavelet filters.	5.73
5.68	Plot of Peak Signal to Noise Ratio (PSNR) Versus Number of Carphone Video Frames of QCIF size using the Periodic Extension and Level Dependent Threshold with Symlets Wavelet filters.	5.73
5.69	Plot of Peak Signal to Noise Ratio (PSNR) Versus Number of Foreman Video Frames of QCIF size using the Periodic Extension and Level Dependent Threshold with Bi-orthogonal Wavelet filters	5.75
5.70	Plot of Peak Signal to Noise Ratio (PSNR) Versus Number of Foreman Video Frames of QCIF size using the Periodic Extension and Level Dependent Threshold with Coiflets Wavelet filters	5.75
5.71	Plot of Peak Signal to Noise Ratio (PSNR) Versus Number of Foreman Video Frames of QCIF size using the Periodic Extension and Level Dependent Threshold with Daubechies Wavelet filters	5.76

5.72	Plot of Peak Signal to Noise Ratio (PSNR) Versus Number of Foreman Video Frames of QCIF size using the Periodic Extension and Level Dependent Threshold with Symlets Wavelet filters	5.76
5.73	Plot of Peak Signal to Noise Ratio (PSNR) Versus Number of Grandma Video Frames of QCIF size using the Periodic Extension and Level Dependent Threshold with Bi-orthogonal Wavelet filters	5.78
5.74	Plot of Peak Signal to Noise Ratio (PSNR) Versus Number of Grandma Video Frames of QCIF size using the Periodic Extension and Level Dependent Threshold with Bi-orthogonal Wavelet filters	5.78
5.75	Plot of Peak Signal to Noise Ratio (PSNR) Versus Number of Grandma Video Frames of QCIF size using the Periodic Extension and Level Dependent Threshold with Daubechies Wavelet filters	5.79
5.76	Plot of Peak Signal to Noise Ratio (PSNR) Versus Number of Grandma Video Frames of QCIF size using the Periodic Extension and Level Dependent Threshold with Symlets Wavelet filters	5.79
5.77	Plot of Peak Signal to Noise Ratio (PSNR) Versus Number of Miss America Video Frames of QCIF size using the Periodic Extension and Level Dependent Threshold with Bi-orthogonal Wavelet filters	7.81
5.78	Plot of Peak Signal to Noise Ratio (PSNR) Versus Number of Miss America Video Frames of QCIF size using the Periodic Extension and Level Dependent Threshold with Coiflets Wavelet filters	7.81
5.79	Plot of Peak Signal to Noise Ratio (PSNR) Versus Number of Miss America Video Frames of QCIF size using the Periodic Extension and Level Dependent Threshold with Daubechies Wavelet filters	7.82
5.80	Plot of Peak Signal to Noise Ratio (PSNR) Versus Number of Miss America Video Frames of QCIF size using the Periodic Extension and Level Dependent Threshold with Symlets Wavelet filters	7.82
5.81	Plot of Peak Signal to Noise Ratio (PSNR) Versus Number of Mother & Daughter Video Frames of QCIF size using the Periodic Extension and Level Dependent Threshold with Bi-orthogonal Wavelet filters	5.84
5.82	Plot of Peak Signal to Noise Ratio (PSNR) Versus Number of Mother & Daughter Video Frames of QCIF size using the Periodic Extension and Level Dependent Threshold with Bi-orthogonal Wavelet filters	5.84
5.83	Plot of Peak Signal to Noise Ratio (PSNR) Versus Number of Mother & Daughter Video Frames of QCIF size using the Periodic Extension and Level Dependent Threshold with Daubechies Wavelet filters	5.85
5.84	Plot of Peak Signal to Noise Ratio (PSNR) Versus Number of Mother & Daughter Video Frames of QCIF size using the Periodic Extension and Level Dependent Threshold with Symlets Wavelet filters	5.85

5.85	Plot of Peak Signal to Noise Ratio (PSNR) Versus Number of News Video Frames of QCIF size using the Periodic Extension and Level Dependent Threshold with Bi-Orthogonal Wavelet filters	5.87
5.86	Plot of Peak Signal to Noise Ratio (PSNR) Versus Number of News Video Frames of QCIF size using the Periodic Extension and Level Dependent Threshold with Coiflets Wavelet filters	5.87
5.87	Plot of Peak Signal to Noise Ratio (PSNR) Versus Number of News Video Frames of QCIF size using the Periodic Extension and Level Dependent Threshold with Daubechies Wavelet filters	5.88
5.88	Plot of Peak Signal to Noise Ratio (PSNR) Versus Number of News Video Frames of CIF size using the Periodic Extension and Level Dependent Threshold with Symlets Wavelet filters	5.88
5.89	Plot of Peak Signal to Noise Ratio (PSNR) Versus Number of Salesman Video Frames of QCIF size using the Periodic Extension and Level Dependent Threshold with Bi-orthogonal Wavelet filters	5.90
5.90	Plot of Peak Signal to Noise Ratio (PSNR) Versus Number of Salesman Video Frames of QCIF size using the Periodic Extension and Level Dependent Threshold with Coiflets Wavelet filters	5.90
5.91	Plot of Peak Signal to Noise Ratio (PSNR) Versus Number of Salesman Video Frames of QCIF size using the Periodic Extension and Level Dependent Threshold with Daubechies Wavelet filters	5.91
5.92	Plot of Peak Signal to Noise Ratio (PSNR) Versus Number of Salesman Video Frames of QCIF size using the Periodic Extension and Level Dependent Threshold with Symlets Wavelet filters	5.91
5.93	Plot of Peak Signal to Noise Ratio (PSNR) Versus Number of Suzie Video Frames of QCIF size using the Periodic Extension and Level Dependent Threshold with Bi-orthogonal Wavelet filters	5.93
5.94	Plot of Peak Signal to Noise Ratio (PSNR) Versus Number of Suzie Video Frames of QCIF size using the Periodic Extension and Level Dependent Threshold with Coiflets Wavelet filters	5.93
5.95	Plot of Peak Signal to Noise Ratio (PSNR) Versus Number of Suzie Video Frames of QCIF size using the Periodic Extension and Level Dependent Threshold with Daubechies Wavelet filters	5.94
5.96	Plot of Peak Signal to Noise Ratio (PSNR) Versus Number of Suzie Video Frames of QCIF size using the Periodic Extension and Level Dependent Threshold with Symlets Wavelet filters	5.94
5.97	Bi-orthogonal Filter-bank Performance for 100 frames of QCIF format, Miss America @ 16 kbps/ 5fps	5.99

5.98	Plot for 100 frames of Carphone sequences of QCIF size at 15fps decoded at data rate of 64 kbps using the proposed algorithm with bi-orthogonal filters	5.101
5.99	Plot for 100 frames of Carphone sequences of QCIF size at 15fps decoded at data rate of 64 kbps using the proposed algorithm with Daubechiesl filters	5.102
5.100	Plot for 100 frames of Carphone sequences of QCIF size at 15fps decoded at data rate of 64 kbps using the proposed algorithm with Coiflets filters	5.103
5.101	Plot for 100 frames of Carphone sequences of QCIF size at 15fps decoded at data rate of 64 kbps using the proposed algorithm with Symlets filters	5.104
5.102	Plot for 100 frames of Carphone sequences of QCIF size at 15fps decoded at data rate of 64 kbps using the proposed algorithm with the best Biorthogonal, Coiflets and Symlets filters	5.105
5.103	Results of PSNR values of the tested video sequences using the proposed video compression scheme against the video data rate (1) 686 kbps (2) 195kbps (3) 74kbps (4) 53kbps (5) 41kbps (6) 21 kbps, with Periodic Extension; Biorthogonal:4.4; Level-dependent Threshold ; Frame rate of 10fps	5.111
5.104	Results of PSNR values of the tested video sequences using the proposed video compression scheme against the Video Data Rates in kbps, with Periodic Extension; Biorthogonal:4.4; Level-dependent Threshold ; Frame rate of 10fps	5.112
5.105	Results of PSNR values of the tested video sequences using the proposed video compression scheme against the Compression Ratio, with Periodic Extension; Biorthogonal:4.4 ; Level-dependent Threshold ; Frame rate of 10fps	5.112
5.106	The decoded SIF of Flower Garden Using Extension: Periodic, and Filter : Bior4.4,Level Dependent Threshold, fps=10, for CR of 3:1, 10:1,and 12:1	5.113
5.107	The decoded SIF of Flower Garden Using Extension: Periodic, and Filter : Bior4.4,Level Dependent Threshold, fps=10, for CR of 27:1, 38:1, 48:1 and 100:1	5.114
5.108	The decoded SIF Format of Football Sequences Using Extension: Periodic, and Filter : Bior4.4,Level Dependent Threshold, fps=10, for CR of 3:1, 10:1,and 12:1	5.115
5.109	The decoded SIF of Flower Garden Using Extension: Periodic, and Filter : Bior4.4,Level Dependent Threshold, fps=10, for CR of 27:1, 38:1, 48:1 and 100:1	5.116

5.110	The decoded Mobile sequences of CIF size at 10fps at average data rate of about 3Mbps using the proposed algorithm with Haar filter	5.117
5.111	The plot of PSNR Vs Number of Miss America sequences of QCIF size at 10fps at average data rate of about 177bps using the proposed 2D and 3D algorithms	5.119
5.112	plot of Compression Ratio Vs Number of Miss America sequences of QCIF size at 10fps at average data rate of about 177bps using the proposed 2D and 3D algorithms	5.119
5.113	The plot of MSE Vs Number of Miss America sequences of QCIF size at 10fps at average data rate of about 177bps using the proposed 2D and 3D algorithms	5.120
5.114	The plot of PSNR Vs Number of Foreman sequences of QCIF size at 10fps at average data rate of about 177bps using the proposed 2D and 3D algorithms	5.121
5.115	The plot of Compression Ratio Vs Number of Foreman sequences of QCIF size at 10fps at average data rate of about 177bps using the proposed 2D and 3D algorithms	5.121
5.116	The plot of MSE Vs Number of Foreman sequences of QCIF size at 10fps at average data rate of about 177bps using the proposed 2D and 3D algorithms	5.122
5.117	The plot of PSNR Vs Number of Akiyo sequences of QCIF size at 10fps at average data rate of about 177bps using the proposed 2D and 3D algorithms	5.123
5.118	The plot of Compression Ratio Vs Number of Akiyo sequences of QCIF size at 10fps at average data rate of about 168kbps using the proposed 2D and 3D algorithms	5.123
5.119	The plot of MSE Vs Number of Akiyo sequences of QCIF size at 10fps at average data rate of about 168kbps using the proposed 2D and 3D algorithms	5.124
5.120	The plot of PSNR Vs Number of Carphone sequences of QCIF size at 10fps at average data rate of about 168kbps using the proposed 2D and 3D algorithms using Sym5	5.125
5.121	The plot of Compression Ratio Vs Number of Carphone sequences of QCIF size at 10fps at average data rate of about 168kbps using the proposed 2D and 3D algorithms	5.125
5.122	The plot of MSE Vs Number of Carphone sequences of QCIF size at 10fps at average data rate of about 177kbps using the proposed 2D and 3D algorithms	5.126

5.123	The plot of Y-Video Bitrate Vs Number of Carphone sequences of QCIF size at 10fps at average data rate of about 62, 113 and 355kbps using the proposed 3D WVC algorithms	5.128
5.124	The plot of Y-PSNR Vs Number of Carphone sequences of QCIF size at 10fps at average data rate of about 62, 113 and 355kbps using the proposed 3D WVC algorithms	5.128
5.125	The plot of Y-Compression Ratio Vs Number of Carphone sequences of QCIF size at 10fps at average data rate of about 62, 113 and 355kbps using the proposed 3D WVC algorithms.	5.129
5.126	The plot of Video Bitrates Vs Number of Video Frames of Miss America QCIF size at 10fps at average data rate of 20, 50, 100 and 500kbps using the proposed 3D-WVC algorithms	5.131
5.127	The plot of PSNR Vs Number of Video Frames of Miss America QCIF size at 10fps at average data rate of 20, 50, 100 and 500kbps using the proposed 3D-WVC algorithms	5.131
5.128	The plot of Video Bitrate Vs Number of Video Frames of Carphone QCIF size at 10fps at average data rate of 20, 50, 100 and 500kbps using the proposed 3D-WVC algorithms	5.132
5.129	The plot of PSNR Vs Number of Video Frames of Carphone QCIF size at 10fps at average data rate of 20, 50, 100 and 500kbps, using the proposed 3D-WVC algorithms	5.132

LIST OF ABBREVIATIONS

ADC	Analog to Digital Converter
ATM	Asynchronous Transfer Mode
AVC	Advanced Video Coding
AWPT	Adaptive Wavelet Packet Transform
bpp	Bit-per-pixel
CCIR	Comite Consultatif International de Radiodiffusion
CCITT	International Consultative Committee for Telephone and Telegraph
CDF	Cumulative distribution function
CD-I	Compact Disk - Interactive
CD-ROM	Compact Disk - Read Only Memory
CIF	Common Intermediate Format
codec	compressor/decompressor
CPU	Central Processing Unit
CR	Compression Ratio
CWT	Continuous wavelet transform
DAC	Digital to Analogue Converter
DCT	Discrete Cosine Transform
DFT	Discrete Fourier Transform
DPCM	Differential Pulse Code Modulation
DTFT	Discrete Time Fourier Transform
DVD	Digital Versatile Disk
DWT	Discrete Wavelet Transform
FBI	Federal bureau investigations

EZW	Embedded zerotree wavelets
FFT	Fast Fourier Transform
FIR	Finite impulse response
FT	Fourier Transform
GOF	Group of Frames
GOP	Group of Pictures
GGD	Generalized Gaussian distribution
HDTV	High Definition Television
HVS	Human Visual System
HPT	High-Pass Temporal
i.i.d.	Independent and identically distributed
ISDN	Integrated Services Distributed Network
ISO	International Standard Organisation
ITU	International Telecommunications Union
JPEG	Joint Photographic's Expert Group
kb	kilobit (1024 bits)
KLT	Karhunen-Loeve Transform
LOT	Lapped orthogonal transform
LPT	Low-Pass Temporal
LVQ	Lattice vector quantization
MAE	Mean absolute error
MSE	Mean Squared Error
Mb	Megabit (1024 kb)
MBps	MegaByte per second
MHz	MegaHertz

MPEG	Motion Picture's Expert Group
MRA	Multiresolution analysis
MSE	Mean Square Error
NVOD	Near Video of Demand
PDF	Probability density function
PLVQ	Pyramid lattice vector quantization
PR	Perfect Reconstruction
PSD	Power spectral density
PSNR	Peak Signal to Noise Ratio
QMF	Quadrature Mirror Filter
QCIF	Quarter Common Intermediate Format
SBC	Subband Coding
SBD	Subband Decomposition
SIF	Standard Interchange Format
SLCCA	Significance-linked connected component analysis
SNR	Signal--to--noise ratio
SPIHT	Set Partitioning In Hierarchical Trees
SQ	Scalar Quantisation
STFT	Short Time Fourier Transform
SVC	Scalable Video Coding
TCG	Transform Coding Gain
VCR	Video Cassette Recorder
VLBR	Very Low Bit rate Video
VLSI	Very Large Scale Integration
VOD	Video of Demand

VOP	Video Object Plane
VQ	vector quantization
WFT	Windowed Fourier Transform (same as STFT)
WPT	Wavelet Packet Transform
WSQ	Wavelet/scalar quantization
WSS	Wide sense stationary
WT	Wavelet transform
Y	Luminance or intensity plane of a picture
