The Association of Southeast Asian Institutions of Higher Learning (ASAIHL) now has a larger agenda to promote Southeast Asia as an education hub as the region is now experiencing a new landscape of higher education.

ASAIHL President, Prof Datin Paduka Dr. Aini Ideris said as the 21st century progressed, the new world of global higher education became fast moving and at the same time, more complex. Prof Datin Paduka Dr. Aini, who is also UPM Vice-Chancellor, said there was a greater need to transform the way people were taught and trained in the required competencies in ICT, research and critical thinking.

She said that they must also be encouraged to develop a global mindset to understand the diversity of universal cultures and appreciate the reality and necessity of functioning interculturally in the modern era. READ MORE
Equitable education achievable through investment

Equitable education is achievable through investment or spending in education as it bears a long-term, positive impact.

Former President of Timor-Leste, Dr. Jose Ramos-Horta, said investment and spending on education would increase the number of educated and skilled persons which in turn enhance employability, and potentially, productivity. READ MORE

Produce learned human capital to lead the world: Dato’ Seri Idris

“Therefore, hand in hand, we will move forward with greater speed to provide the necessary infrastructure and amenities for our people, for our future generation the wealth of education and the wealth of knowledge so that we are comparable or even better than the world outside our region,” he said when opening the Association of Southeast Asian Institutions Of Higher Learning 2016 (ASAIHL) conference, themed Borderless Open Access Education. FMA resurfacing innovation minimizes potholes, cracks

A team of Universiti Putra Malaysia (UPM) researchers have succeeded in developing a Fiber Mastic Asphalt (FMA) pavement technology that seeks to boost durability and longevity of roads to minimize cases of potholes and pavement cracks. Under this technology, the fibers are processed from biomass materials such as oil palm fronds which are added to the mixture of asphalt (tar) to improve the strength and durability of pavements. READ MORE

Eco-Zyme expedites kenaf retting process to three days

Researchers of UPM have succeeded in developing Eco-Zyme, an enzyme that is extracted from locally isolated microbes to help in the process of kenaf retting in order to obtain kenaf fibres. This enzyme will degrade pectic substances that bind kenaf fibres together in bundles form, releasing the single kenaf fibres from the kenaf bundles. READ MORE

UPM holds Smart Kids, Smart Money initiative to create prudent society

Faculty of Human Ecology (FEM), UPM, with the cooperation of Kawasan Rukun Tetangga (KRT) Taman Sri Serdang here, held a “Smart Kids, Smart Money” programme in an effort to create a prudent community who could manage their finances wisely. Head of Programme, Assoc. Prof. Dr. Mohamad Fazli Sabri said the idea to organize the community-smart money program was mooted following a study that was conducted in 2014 which showed the practice of saving among students in Year 4 and Year 5 was still low.
