Visual Text Arranger

Che An Abdul Ghani

Visual language has been employed since early history till the present and is an integral part of human daily endeavours. According to the Visual Language Theory (Marriot & Meyer, 1998), the dynamics of visual language influence on humans is infinite. Based on this theory and the endless possibilities it can offer, the visual approach is adopted widely in the field of education and in the field of language acquisition. Vocabulary plays an important role in learning a new language because it is the fundamental factor that will determine one's success or failure to interact in the new language (Leu & Kinzer, 2003). One of the popular methods is teaching vocabulary through games. In this study, the researcher had invented a game that can promote enthusiasm to learn English words through Visual Text Arranger. In this game, learners will respond to the riddles and images pasted on the wall. Learners will submit answers to a WhatsApp administrator who will determine the answers are correct or incorrect and a reward will be given to the selected winner. An element of technology is added to this game to suit the present state of young minds who are generally techno-freaks. In short, Visual Text Arranger is a versatile and fun approach to develop language skill and to hone the neurolinguistic aspect of the mind.

long stem. I have
