Roots of *Garcinia mangostana* L. and the stem bark of *Mesua corneri* L. were chemically investigated. Detail phytochemical studies on the roots of *Garcinia mangostana* L. and the stem bark of *Mesua corneri* L. have resulted in the isolation of eleven compounds. The structures of these compounds were elucidated using spectroscopic experiments namely NMR, IR, UV and MS.

The root bark of *Garcinia mangostana* L. furnished six xanthones, α -mangostin, β -mangostin, γ -mangostin, garcinone-D, mangostanol and gartanin. Up to now, research has only been carried out on the fruit hull and the stem bark of this plant. There have been no studies yet on the root bark of *Garcinia mangostana* L. Meanwhile, investigations on stem bark of *Mesua corneri* L gave three triterpenoid, stigmasterol,

fridelin, friedelan-1,3-dione and two xanthones, rubraxanthone and Inophylin B. So far, there has been no reports at all on this plant.

The crude hexane and chloroform extracts of *Mesua cornei L.* stem bark were active against HL-60 cell line with IC₅₀ values of less than 30 µg/ml. The crude hexane and chloroform extracts of *Garcinia mangostana L.* root bark were found to be active against CEM-SS cells line with IC₅₀ values of less than 30 µg/ml. Meanwhile, the γ-mangostin gave a significant activity with an IC₅₀ value of 4.7 µg/ml. This is a new activity for this plant.

The antimicrobial assay was carried out towards four pathogenic bacteria, Methicillin Resistant *Staphylococcus aures*, *Pseudomonas aeruginosa*, *Salmonella typhimurium* and *Bacillus subtilis*. Most of the crude extracts tested against these microbes gave only moderate or weak activities.

The larvicidal tests performed against the larvae of *Aedes aegypti*. The crude hexane and chloroform extracts of *Garcinia mangostana L.* showed a strong activity against the larvae with LC₅₀ values of less than 100 µg/ml. The pure compounds α-mangostin and γ-mangostin gave good activities with LC₅₀ value of 18.4 and 32.4 µg/ml respectively .The crude hexane and choloroform extracts of *Mesua cornei L.* showed a good activities against the larvae and gave LC₅₀ values of less than 100 µg/ml. Rubraxanthone showed a strong activity against the larvae with a LC₅₀ value of 18.4 µg/ml. These activities have not been reported before and this is a new finding.

The antifungal activity testing of the plant extracts were carried out against the fungi *Candida albican*, *Aspergillus ochraceaus*, *Sacchoromyces cerevisiae* and *Candida lypolytica*. No activity was observed for all the crude extracts.

Abstrak tesis yang dikemukakan kepada Senat Universiti Putra Malaysia sebagai memenuhi keperluan untuk ijazah Master Sains

**KAJIAN FITOKIMIA DAN AKTIVITI BIOLOGI DARIPADA
MESUA CONERI (LINN.) DAN *GARCINIA MANGOSTANA* (LINN.)**

Akar dari pokok *Garcinia mangostana* dan kulit batang dari pokok *Mesua cornei L.* telah dikaji secara kimia. Kajian fitokimia terperinci ke atas bahagian akar *Garcinia mangostana* dan bahagian kulit batang pada tumbuhan *Mesua cornei L* telah menghasilkan sebelas sebatian. Struktur sebatian-sebatian ini ditentukan dengan menggunakan eksperimen spekstroskopi seperti NMR, IR, UV dan MS.

Akar dari *Garcinia mangostana L.* telah menghasilkan enam xanthone iaitu, α -mangostin, β -mangostin, γ -mangostin, garcinone-D, mangostanol dan gartanin. Sehingga sekarang, kebanyakkan penyelidik hanya tertumpu kepada bahagian kulit buah dan kulit batang pada tumbuhan ini dan tiada kajian mengenai bahagian akar pada tumbuhan ini. Manakala, kajian terperinci terhadap kulit batang pokok. *Mesua cornei L.* telah menghasilkan tiga triterpenoid, stigmasterol, fridelin, friedelan-1,3-dione dan dua

xanthone, rubraxanthone dan inophyllin B.Tiada lagi laporan mengenai pokok ini diterbitkan.

Ekstrak mentah heksana dan kloroform *Garcinia moangostana L.* dianggap sebagai aktif ke atas sel HL-60 dengan nilai IC₅₀ kurang daripada 30 µg/ml. Ekstrak mentah heksana dan kloroform *Meusa coneri L.* juga dianggap aktif ke atas sel CEM-SS dengan nilai IC₅₀ kurang daripada 30 µg/ml. Sebatian tulen iaitu γ-mangostin telah menunjukkan keaktifan yang baik pada dengan IC₅₀ adalah 4.7 µg/ml. Ini adalah penemuan bagi sebatian tulen ini.

Ujian anti-mikrobial dijalankan dengan menggunakan bakteria-bakteria jenis Methicillin Resistant *Staphylococcus aures*, *Pseudomonas aeruginosa*, *Salmonella typhimurium* dan *Bacillus subtilis*. Kebanyakan ekstrak yang diuji menunjukkan keaktifan yang sederhana atau rendah terhadap bakteria-bakteria.

Ujian larva telah dijalankan dengan menggunakan larva jenis *Aedes aegypti*. Kesemua ekstrak mentah *Garcinia mangostana* mempunyai aktiviti yang kuat terhadap terhadap larva dengan nilai LC₅₀ kurang 100 µg/ml. Sebatian tulen iaitu α-mangostin dan γ-mangostin memberikan aktiviti yang kuat dengan LC₅₀ adalah 18.4µg/ml dan 32.4 µg/ml. Ekstrak mentah *Mesua coneri* menunjukkan aktiviti yang baik terhadap larva dengan memberikan nilai LC₅₀ kurang daripada 100 µg/ml. Rubraxanthone menunjukkan aktiviti yang kuat terhadap larva dengan nilai LC₅₀ 18.4 µg/ml. Aktiviti ini belum pernah lagi dilaporkan sebelumnya ini dan ini adalah penemuan baru.

Aktiviti anti-fungal ekstrak tumbuhan telah dijalankan ke atas *Candida albican*, *Aspergillus ochraceaus*, *Sacchoromyces cerevisiae* dan *Candida lypolytica*. Tiada aktiviti diperhatikan ke atas semua ektrak mentah.

ACKNOWLEDGEMENTS

All praises to Allah, Lord of the universe. Only with His grace and mercy that this thesis can be completed.

I wish to express my sincere thanks to my supervisor Assoc. Prof. Dr. Gwendoline Ee Cheng Lian for her invaluable guidance, support and continuous encouragement throughout the course of this project.

My gratitude also goes to my supervisory committee Prof. Dr. Mawardi Rahmani for his support and comments. Financial support from Malaysian Government under then IRPA programme and UPM fundamental research are gratefully acknowledged.

My special thanks to my colleagues Chan Kiang, Sooi Kim, Audrey, to my best friends Mohd. Shamsul Ezzad, Shaari Daud and to my special friend Nur Syuriati for sharing the stress, laughter and useful advice during this project. Special thanks are extended to staff of the Chemistry Department of UPM especially Mr. Johadi, Mr. Zainal Abidin Kassim, and Mrs Rusnani Aminuddin for helping me to obtain NMR, GC-MS and IR data.

Last but not least, I wish to especially acknowledge my beloved mum (Siti Khadijah) and dad (Sheikh Mohd. Ghazali), and to my sisters (Siti Nur Adawiyah and Siti Nur Ahdiah) and brother (Sheikh Ahmad Firdaus) for their patience, love and understanding.

IR	Infra Red
<i>J</i>	coupling constant in Hz
l	litre
LC	Lethal Concentration
LD	Lethal Dose
m	multiplet
ml	mililitre
Me ₂ CO	acetone
MeOH	methanol
m.p.	melting point
MS	Mass Spectrum/Spectra/Spectrometry
NMR	Nuclear Magnetic Resonance
ppm	part per million
s	singlet
t	triplet
TLC	Thin Layer Chromatography
UV	Ultra Violet
