DEDICATION

This thesis is dedicated to my late father Apayo Uguak Bouk, mother Ahok Ajang Amoi, late brothers and sister who always affected my mind and memory; May God blesses them.

Abstract of thesis presented to the Senate of Universiti Putra Malaysia in fulfilment of the requirements for the degree of Doctor of Philosophy

**PSYCHOLOGICAL FACTORS ASSOCIATED WITH
STUDENTS' ACADEMIC ACHIEVEMENT IN AN INTERNATIONAL
SCHOOL IN KUALA LUMPUR**

By

October, 2005

Chairman: Professor Habibah Bt. Elias, PhD

Faculty: Educational Studies

This study investigated the relationship between psychological factors and students' academic achievement among foreign students in an international school in Kuala Lumpur. The academic achievement of the students in the target international school was unevenly distributed among the students. This uneven distribution was studied to identify the psychological factors that best predicted the students' academic achievement. The research employed an ex post facto design and the data was collected through a set of questionnaires. One hundred and fifty subjects were randomly selected out of seven classes based on Kerlinger and Pedhazur (1973); Cohen's (1988) principles and formula respectively.

Both descriptive and inferential statistics were used to analyze the data in the study using SPSS. The statistical techniques used were Descriptive Statistics, Independent-Sample t-test, Analysis of Variance (ANOVA), Pearson Product Moment Correlation (r), and Multiple Linear Regression.

The research findings showed that there was no statistical significant difference between female and male students on psychological factors (adjustment, motivation, attitude, locus of control, self-efficacy, and attribution). The findings also revealed that the primary and secondary levels were significantly different only on locus of control. A positive and significant relationship was also found between psychological factors and academic achievement with strengths ranging between moderate and low.

The results of the multiple regression analysis showed that attribution, adjustment, self-efficacy, and attitude were significant predictors of academic achievement. The R^2 .547 implies that the four predictor variables explain about 54.7% of the variance in academic achievement. On the other hand, Locus of control and motivation were not significant but positively related to academic achievement. Generally, the findings indicated that the four psychological factors were the most significant factors in explaining the variance of academic achievement.

Abstrak tesis yang dikemukakan kepada Senat Universiti Putra Malaysia

**FAKTOR-FAKTOR PSIKOLOGI YANG BERKAITAN
DENGAN PENCAPAIAN AKADEMIK PELAJAR DI SEBUAH SEKOLAH
ANTARABANGSA DI KUALA LUMPUR**

Oleh

Pengerusi: Profesor Habibah Bt. Elias, PhD

Fakulti: Pengajian Pendidikan

Kajian ini dijalankan untuk mengkaji hubungan antara faktor-faktor psikologi dengan pencapaian akademik di kalangan pelajar asing di sebuah sekolah antarabangsa. Pencapaian akademik pelajar asing di sekolah antarabangsa didapati berbeza taburannya di kalangan pelajar. Taburan yang tidak sama rata ini dikaji untuk mengenalpasti faktor-faktor psikologi yang menjadi peramal terbaik dalam pencapaian akademik pelajar. Kajian ini dijalankan dengan menggunakan reka bentuk ex post facto dan data dikumpul dengan menggunakan soal selidik. Sebanyak seratus lima puluh subjek telah dipilih secara rawak daripada tujuh buah kelas berdasarkan prinsip dan formula Kerlinger dan Pedhazur (1973); dan Cohen (1988).

Statistik deskriptif dan inferensi telah digunakan untuk menganalisis data kajian ini. Pakej statistik untuk Sains Sosial (SPSS) versi 11.5 telah digunakan dalam analisis data. Teknik-teknik statistik yang digunakan ialah statistik deskriptif, ujian t tidak bersandar, analisis varian (ANOVA), korelasi Pearson (r) dan analisis regresi linear pelbagai. Hasil kajian menunjukkan tidak terdapat perbezaan statistik yang signifikan di antara pelajar perempuan dan pelajar lelaki dalam faktor psikologi (penyesuaian, motivasi, sikap, lokus kawalan dan atribusi). Hasil kajian juga menunjukkan pelajar peringkat rendah dan pelajar peringkat menengah berbeza dengan signifikan dari segi lokus kawalan. Hubungan yang positif dan signifikan turut didapati antara setiap faktor psikologi dan pencapaian akademik.

Hasil analisis regresi berganda menunjukkan atribusi, penyesuaian, efikasi sendiri dan sikap adalah faktor signifikan dalam meramalkan pencapaian akademik. R^2 .547 menunjukkan bahawa empat pemboleh ubah peramal menerangkan 54.7 peratus varians dalam pencapaian akademik. Sementara itu lokus kawalan dan motivasi tidak signifikan tetapi berkaitan dengan pencapaian akademik. Secara umumnya, keputusan menunjukkan bahawa empat faktor psikologi merupakan faktor yang paling signifikan dalam menerangkan varians pencapaian akademik.

ACKNOWLEDGEMENTS

This research effort represents a culmination of advice and great support of many people to whom I am deeply grateful. I wish to express my utmost appreciation and deepest gratitude to the following individuals:

I am greatly indebted to my thesis supervisory committee members. I would like to acknowledge their patience, guidance, and willingness to share their knowledge, skills, time and experience particularly, my supervisor, Professor Dr. Habibah Bt. Elias, and the committee members.

To Professor Dr. Habibah Bt. Elias, for her efforts as the source of my success, strength, and inspiration for this work. She is a sincere and extremely caring educator who has always encouraged me to be creative in my research work. She has always to bring out the best in me to be a good researcher. She also patiently perused and validated the contents of the research instrument, from time to time. Her constant constructive ideas and criticisms as well as invaluable advice throughout this study provided me with the right direction and motivation to successfully complete this study.

To Associate Professor Dr. Jegak Uli for his concern, support and valuable remarks for continuous guidance especially in the statistical analysis of the data. He provided the necessary suggestions and ideas that contributed to the quality of the study. He scrutinized this work specially my results and gave valuable feedback which greatly improved it. I really extend particular thanks for his work tirelessly at guiding and constructively criticizing every step of my work.

To Professor Dr. Turiman Suandi for his comments, guidance and support especially in the research method. He provided the necessary advices for this work regarding the research ethics. He was always ready to listen and to give advice when it was needed most. His contribution encouraged me to complete this work.

Ones more, I would like to express my gratitude to the panel of languages and instruments experts for their valuable comments and suggestions. I am also indebted to the administration of the Libyan school where data were collected for their permission to allow the data collection from their students. I am also acknowledging with the profound gratitude Mr. Sebastian Frances Koren who devoted his time with patience in going through my drafts.

Likewise, I would like to express my gratitude to the Ministry of High Education, Sudan for granting me a permission to pursue for higher studies. I am equally grateful to my wife and children for their support, endurance and perseverance through all the tough times they experienced while I was preparing this work. Finally, I would like to acknowledge all types of support rendered to me technically, financially, and morally from other parties not mentioned herein that helped to make this research a success.
