of the requirement for the degree of Doctor of Philosophy

**INTEGRITY CONSTRAINTS MAINTENANCE FOR PARALLEL
DATABASES**

By

FERAS AHMAD HAMED HANANDEH

July 2006

Chairman : Associate Professor Hamidah Ibrahim, PhD

Faculty : Computer Science and Information Technology

This research work proposed a standard framework for maintaining integrity in parallel database systems. A model consisting of two main modules has been successfully implemented. This framework is flexible and can be extended easily as the framework is designed in a modular fashion where each module has a clear function, input and output and interacts easily with the other modules.

A constraint verification method is proposed to check the consistency between the integrity constraints in the constraint base. The proposed method is based on the construction of *Modal Records* to determine if a newly defined constraint is not contradicting with an existing constraint set.

A constraint simplification approach is proposed to simplify the integrity constraints in the constraint base. Deriving and checking a simplified version of the integrity constraint called integrity tests can gain efficiency. Efficient maintenance of integrity is a critical problem, since checking the validity of a large number of integrity

constraints against a large database is crucial to the database systems. The derivation of these integrity tests is not trivial, adding to the cost of integrity maintenance.

The strength of the proposed approach is that it combines the advantages of the substitution as well as the theorem proving technique in the previous work. The proposed approach is based on substitution and requires no resolution search. It requires no complex transition axioms to describe the update operations. The proposed method is considered as a general one since it derives complete integrity tests for first order constraints. In addition, it derives sufficient tests for key, referential and semantic integrity constraints. The complete and sufficient integrity tests can be applied before the update operation is performed. Moreover, it can be extended to deal with transition integrity constraints, which are excluded from the previous approaches. Transition integrity constraints are important since they give relationships between the two states that an update or transaction is required to obey.

As the research interest is in parallel database system, this research has proposed a virtual rule partitioning method for maintaining database integrity by dynamically partition the table(s) to accommodate with parallel integrity subsystem. Therefore, there will be no fixed partitions specified during the design process, which result in time consuming for the system to locate the proper partition of data, for fulfilling the requirement of the integrity test. The presented method is benefited from the direct access method because the tuples in each partition are indexed according to the test attribute during the execution of the integrity test. The test attribute is the attribute of the generated test that is substituted by the submitted update operation.

Abstrak tesis dikemukakan kepada Senat Universiti Putra Malaysia sebagai memenuhi keperluan untuk ijazah Doktor Falsafah

**PENYELENGGARAAN KEKANGAN INTEGRITI UNTUK PANGKALAN
DATA SELARI**

Oleh

FERAS AHMAD HAMED HANANDEH

Julai 2006

Pengerusi : Profesor Madya Hamidah Ibrahim, PhD

Fakulti : Sains Komputer dan Teknologi Maklumat

Kajian ini bertujuan untuk memberikan model umum yang menyeluruh dalam penyelenggaraan integriti pangkalan data selari. Sebuah model yang terdiri dari dua model utama telah berjaya dibangunkan. Rangkakerja ini adalah fleksibel dan mudah dilanjutkan sebagaimana rangkakerja direka dalam fesyen modular di mana setiap modul mempunyai fungsi modul yang jelas, *input* dan hasil serta berinteraksi dengan mudah antara modul yang lain.

Kaedah penyemakkan kekangan dicadangkan untuk menyemak konsisten antara kekangan integriti dalam kekangan asas. Kaedah yang dicadangkan adalah berasaskan pada pembinaan Modal-modal Rekod untuk mengenalpasti samaada kekangan yang baru dihasilkan tidak bertentangan dengan set kekangan yang wujud.

Pendekatan permudah kekangan dicadangkan untuk memudahkan kekangan-kekangan integriti dalam kekangan asas. Perolehan dan penyemakan adalah versi yang mudah bagi kekangan integriti yang dipanggil pengujian integriti yang boleh memperolehi keberkesanan. Pengelenggaraan yang berkesan bagi integriti adalah

masalah yang kritikal, sejak penyemakan kesahihan nombor yang besar bagi kekangan integriti bertentangan dengan pangkalan data yang besar adalah genting kepada sistem pangkalan data. Asalan bagi pengujian integriti adalah tidak penting dan ia menambahkan kos penyelenggaraan integriti.

Kekuatan kajian ini adalah pada pembangunan kaedah yang menggabungkan kelebihan bagi penggantian dan begitu juga pada pembuktian teorem. Kajian ini berdasarkan kaedah pengantian yang tidak memerlukan carian resolusi. Ia juga tidak memerlukan transaksi aksiom yang kompleks untuk menerangkan operasi kemaskini. Kaedah yang dicadangkan ini, boleh dianggap sebagai kaedah umum kerana ia menghasilkan ujian-ujian integriti yang lengkap untuk kekangan tahap pertama. Tambahan lagi, ia menghasilkan ujian-ujian yang mencukupi untuk kekunci, rujukan, dan semantik kekangan integriti. Ujian-ujian yang lengkap dan mencukupi boleh dilaksanakan sebelum operasi kemaskini dilaksanakan. Lagipun ia boleh dilanjutkan untuk berurusan dengan transaksi kekangan integriti, yang dikecualikan dari kaedah sebelum ini. Transaksi kekangan integriti adalah penting kerana ia memberi hubungan antara dua keadaan di mana kemeskini atau transaksi perlu dipatuhi.

Dalam sistem pangkalan data selari ini, kajian ini mencadangkan satu kaedah peraturan pembahagian maya untuk penyelenggaraan pangkalan data yang secara dinamik membuat pembahagian jadual untuk memenuhi integriti sub-sistem selari. Oleh itu, tiada pembahagian tetap pada proses rekabentuk yang mana boleh memakan masa sistem dalam menempatkan pembahagian data yang sesuai bagi memenuhi keperluan ujian integriti. Kaedah yang dibentangkan mendapat kebaikan dari kaedah pencapaian terus kerana *tuples* setiap pembahagian diindekskan

berdasarkan ujian atribut semasa pelaksanaan ujian integriti. Atribut pengujian ialah atribut dalam ujian yang dijanakan yang digantikan oleh operasi pengemaskinian yang dihantar.

ACKNOWLEDGEMENTS

In the name of *ALLAH*, the most merciful and most compassionate. Praise to *ALLAH S.W.T.* who granted me strength, courage, patience and inspirations to complete this research work.

This work would not have been possible without the nicest guidance from my research supervisor, Associate Professor Dr. Hamidah Ibrahim. She inspires me about the right way of the research in addition to introducing me on the topic of Integrity Constraint Maintenance.

I would like to express my gratitude and thanks to the supervisory committee, Associate Professor Dr. Ali Mamat for his valuable comments and fruitful discussions about database concepts and Dr. Rozita Johari for her guidance of the parallel part of this research.

This research is partially supported by an IRPA fund number 04-02-04-0797-EA001, which is sponsored by Malaysian Ministry of Science, Technology and Innovation. Thanks to the Malaysian Government for the support.

My noblest father Haj Ahmad Al-Hanandeh and my great mother Hajh Khadeejah Al-Telfah were the reason of my success. They are my first teachers who taught me the mystery of success and the greatness of science. Furthermore, they taught me that humbleness is the reason of getting more and more knowledge. I am indebted to them for all the stages left and remaining of my life.

To my wife and my lovely kids, *Sara, Ahmad* and *Rama*, thank you! for your patience and encouragement during my study. You were given me joy and happiness during the difficult and the critical period of my research. I would like to express my warmest gratitude to my lovely sisters, brothers and brothers in law for their loves, prayers, patient, understanding and encouragement. My dearest uncles Mohammad and Ahmad Telfah deserve much respect for their honest encouragement.

My great thank goes to Yarmouk University, Jordan, represented by its chancellor Prof. Mohammad Al-Sabarini for approving the leave to pursue my PhD study in UPM, Malaysia.

Special appreciation to my friends, mainly, Raed Khasawneh, Dr. Maen Masadeh, Dr. Qasem Radaideh and Dr. Majdi Qudah for their joy sharing during the period of my study in Malaysia and their encouragement.

Feras Ahmad Al-Hanandeh

July 2006

I certify that an Examination Committee has met on 25 July 2006 to conduct the final examination of Feras Ahmad Hamed Hanandeh on his Doctor of Philosophy thesis entitles "Integrity Constraints Maintenance for Parallel Databases" in accordance with Universiti Pertanian Malaysia (Higher Degree) Act 1980 and Universiti Pertanian Malaysia (Higher Degree) Regulations 1981. The Committee recommends that the candidate be a warded the relevant degree. Members of the Examination Committee are as follows:

Abdul Azim Abd. Ghani, PhD

Associate Professor
Faculty of Computer Science and Information Technology
Universiti Putra Malaysia
(Chairman)

Md. Nasir Sulaiman, PhD

Associate Professor
Faculty of Computer Science and Information Technology
Universiti Putra Malaysia
(Internal Examiner)

Mohamed Othman, PhD

Associate Professor
Faculty of Computer Science and Information Technology
Universiti Putra Malaysia
(Internal Examiner)

Mustafa Mat Deris, PhD

Professor
Faculty of Information Technology and Multimedia
Kolej Universiti Tun Hussein Onn
(External Examiner)

HASANAH MOHD. GHAZALI, PhD

Professor / Deputy Dean
School of Graduate Studies
Universiti Putra Malaysia

Date:

This thesis submitted to the Senate of Universiti Putra Malaysia and has been accepted as fulfilment of the requirement for the degree Doctor of Philosophy. The members of the Supervisory Committee are as follows:

Hamidah Ibrahim, PhD

Associate Professor
Faculty of Computer Science and Information Technology
Universiti Putra Malaysia
(Chairman)

Ali Mamat, PhD

Associate Professor
Faculty of Computer Science and Information Technology
Universiti Putra Malaysia
(Member)

Rozita Johari, PhD

Lecturer
Faculty of Computer Science and Information Technology
Universiti Putra Malaysia
(Member)

AINI IDERIS, PhD

Professor / Dean
School of Graduate Studies
Universiti Putra Malaysia

Date:

DECLARATION

I hereby declare that the thesis is based on my original work except for quotations and citations which have been duly acknowledged. I also declare that it has not been previously or concurrently submitted for any other degree at UPM or other institutions.
