Abstract

Spathoglottis Blume is a well-known genus with a total of 44 species and widely distributed from Tropical Asia to Subtropical Asia and Pacific Islands; concentrated particularly in the Malesian region. Eight species were recorded from Malaysia and despite of a widely grown genus; *Spathoglottis* is a taxonomically confused genus in Orchidaceae. Confusion on several species within the Yellow *Spathoglottis* Complex was resolved using both morphological and molecular evidences.

Keywords: Orchidaceae, *Spathoglottis*.
